TANK CONSTRUCTION

State plan number/LPO plan number is: _____

Tank is new and carries UL or other national testing label. – Listing Org. & Number: _____

Tank is used, but has been recertified to meet the EPA new tank standard – Recert by: _____

Tank corrosion protection via: Sacrificial anodes Impressed current Fiberglass Composite tank

Pipe corrosion protection via: Sacrificial anodes Impressed current Fiberglass Non corrosive material

TANK HANDLING AND TESTING

Pre-installation test of single wall tank conducted in accordance with manufacturer's specifications and Comm 10 adopted standards. Yes No NA

Pre installation test of double-walled tank: in accordance with manufacturer's specifications and Comm 10 adopted standards. Yes No NA

TANK SITE AND BACKFILL

Installation is in an area of high water table or subject to flooding and tank is anchored or overburden calculations furnished. Yes No NA

Excavation is in a bog, swampy area or landfill and a filter fabric was used to prevent the migration of the backfill material. Yes No NA

Backfill for steel or fiberglass clad steel tank is clean, washed, well granulated sand, crushed rock, or pea gravel no larger than 3/4 inch. Yes No NA

Backfill for fiberglass tank is pea gravel naturally round with minimum diameter of 1/8 inch and maximum size of 3/4 inch or crushed rock or gravel between 1/8 and 1/2 inch in size. Yes No NA

Piping

Pressurized piping with auto shutoff, alarm or flow restrictor. Will any piping be manifolded? Yes No

Suction piping with check valve at pump and inspectable. Suction piping with check valve at tank.

Flexible connectors are used at the top of tank, between tank and vent pipe, below the dispenser and also where less than 4 feet of run exists between changes in direction with fiberglass piping. Yes No NA

PRIMARY LEAK DETECTION (Check which applies under both TANK and PIPING)

Tank

Tightness testing and inventory control Automatic tank gauging Vapor monitoring Groundwater monitoring

Interstitial monitoring Manual tank gauging (only for tanks of 1,000 gallons or less)

Piping (pressurized or suction with check valve at tank) Pipe installation is: single wall, double walled.

Tightness testing Automatic line leak detectors Vapor monitoring

Groundwater monitoring Interstitial monitoring

Vapor recovery piping Yes No Vapor recovery piping manifolded Yes No

Equipment matches the plan review. Yes No Note discrepancies and resolution in Comment Section

Pre-installation Scope and Planning Meeting Expectations

- 1) Administrative aspects and how contractor will verify and document integrity and diagnostic tests, e.g., sump containment tightness, system leak detection, corrosion protection, overfill alarm, etc.

- 2) Verify that system is being installed within the restrictions of the respective Material Approval or Petition For Variance.

- 3) Verify tank, dispenser and emergency control locations and setbacks as reflected on the plan.

- 4) Potential plan revision items.

- 5) Agree on notification / inspection time parameters, flexibility, etc.

- 6) Third-party contractors that may be involved, e.g., fencing contractor, tightness tester, etc. Areas of the installation that are not under the responsibility of the tank system equipment contractor, e.g., electrical.

- 7) Who will be attending final inspection and what must be accessible and available.
