Question:

The bid specification (both sites) state: " Soil contamination ... shall be remediated to meet NR 720 ... levels."

Does this mean the generic levels of 0.005 ppm benzene, etc.? Or will the invocation of other NR720 sections, like NR720.19 on 'site-specific' levels be allowed?

Answer:

Both generic and site-specific contamination levels will be acceptable to establish criteria for closure. Calculations for site-specific contamination levels will be required as an addendum to the closure request.
