The Site Investigation Report and the Additional Site Investigation Report indicate there is some contamination below four feet which exceeds NR 746 Table 1 values. However, the Bid document suggests that only those soils within the top 4 feet that exceed Table 2 values should be addressed. Because attaining closure requires that soil contamination above Table 1 be addressed, will the bids that do not address these soils be considered compliant with the bid requirements?

Bids that do not address soil contamination (above Table 1 concentration levels) more than four feet below ground surface will be considered compliant.
