

Questions & Answers
Clark Oil #70
COMM # 53566-1653-30
BRRTS # 03-23-001430

1) What is the depth of the screen bottom for piezometer PZ-1?

Response: Piezometer PZ-1 is screened at 40 to 45 ft. below ground surface. As stated in the bid specification, the screen for the new piezometer should be set at approximately the same elevation as the PZ-1 screen.

2) Was air-rotary needed to install wells into bedrock?

Response: Generally, the previous consultant used hollow stem auger drilling in shallow bedrock and air rotary drilling in deeper bedrock.
