BRRTS #02-72-108810

Question: Have the Department of Commerce and Department of Natural Resources established a minimum soil volume to excavated and disposed of from Area B that will comply with the minimum bid requirements? If yes, please provide the soil volume acceptable to COMM and WDNR.

Answer: Neither department has calculated the volume of soil to be excavated and disposed of. The area to be excavated is as stated in the Bid Document. The Bid Document states; "Excavation and disposal/treatment of all petroleum-saturated contaminated soil (above WIS. Admin. Code s. NR746 Table 1 concentrations) in the free product area indicated in Figure 1 of the 1997 Progress Report, to a depth of 9 feet below grade, or competent bedrock, which ever comes first."
