Question #1:

Does the Department consider the site investigation to be complete?

Answer:

Prior to a site being sent to bid the site investigation is reviewed by the Department and found to be complete.

Question #2:

If additional groundwater monitoring shows continued NR 140 ES exceedences of benzene in MW-12, does the Department consider this to be indicative of a plume that extends onto a private property thereby necessitating the agreement of that property owner to accept a Groundwater Use Restriction in order to achieve closure?

Answer:

The Department understands the question to be: If NR 140 Enforcement Standard (ES) exceedences in monitoring well MW-12 are present when closure is requested, will an off-site groundwater use restriction be required for closure?

Monitoring well MW-12 is in the right of way, therefore an off-site groundwater use restriction will not be required. A notification will need to be filed with the municipality.
