ARE THE THREE ADDITIONAL MONITORING WELLS THAT NEED TO BE INSTALLED LOCATED ON- OR OFF-SITE?

Two of the wells would be located on site and one would be located in the road right-of-way.

IN ADDITION TO THE THREE NEW WELLS, WILL ANY OF THE WELLS REMOVED DURING THE EXCAVATION NEED TO BE REPLACED, OR WILL THE SUMP INSTALLED IN THE EXCAVATION SERVE AS AN ACCEPTABLE SAMPLING POINT IN THE FORMER SOURCE AREA?

Any monitoring well destroyed by the excavation can be replaced with a sump.

* The consultant in charge of the investigation submitted the following statement:

“It should be noted that for any excavation work to be done at the site, sheet piling will need to be installed to prevent the collapse of the excavation into the water due to the proximity of the impacted source area for excavation to the Fox River.”

The Department of Commerce does not necessarily agree with this statement.
