Question: What are the Departments requirements for the diameter, depth and screen length of both the replacement RW's for those destroyed during excavation activities? Additionally, under the "Minimum Remedial Requirements" section, the bid states the replacement of only one RW, but under the "Replacement of Recovery Well" section the bid clearly states that both of the RW's need to be replaced. How many replacement wells does the Department require?

Answer: Diameter, depth and screen length of **both** the replacement recovery wells (RW's) will be the same as the recovery wells that will be destroyed as part of the excavation.
