

SUMMARY OF FINAL REGULATORY FLEXIBILITY ANALYSIS

Department of Commerce

CLEARINGHOUSE RULE NO.: 05-113

RULE NO.: Chapters Comm 2, 20, 21, 60 and 61

RELATING TO: Erosion control, sediment control and storm water management for the constructio of
buildings

Final Regulatory Flexibility Analysis Summary

Pursuant to statutory mandates under sections 101.1205 and 101.653, Stats., the rules establish statewide standards for erosion and sediment control for the construction of public buildings, places of employment and one- and two- family dwellings in order to protect the waters of the state. For construction sites where one or more acres of land-disturbing activity occurs the rules and compliance with the rules reflect the standards of the U.S Environmental Protection and the Wisconsin Department of Natural Resources. In order to achieve the statutory goal of protecting the waters of the state compliance is not differentiated based upon the size of a business. The proposed rules establish different standards for the potential risk posed by the amount of the land disturbing construction activity, in this case, one or more acres and less than one acre.
