

LicenseE Numbering for Trades Credentials

Credentials that moved to LicenseE have an updated numbering format – a suffix has been added to your credential number. Customers entering their credential number into an eSLA application will utilize the new numbering format:

1234 - ABC

XXXX - XX (with a space before and after the -)

The list below has been provided to assist with determining the suffix added to your existing credential number. You can also reference the [LicenseE look-up tool](#) to confirm your full credential number.
