DEPARTMENT OF INDUSTRY, LABOR AND HUMAN RELATIONS
201 E. Washington Ave.
Madison, Wisconsin 53702
INTRODUCTION

Purpose and Structure

The legislature, by section 35.93 and chapter 227, Wis. Stats., 1955, directed the publication of the rules of administrative agencies having rule-making authority in a loose-leaf, continual revision system known as the WISCONSIN ADMINISTRATIVE CODE. The code is kept current by means of new and replacement pages. The pages are issued monthly, together with notices of hearings on proposed rules, emergency rules, new rules, instructions for inserting new material, and other pertinent information. This monthly service is called the WISCONSIN ADMINISTRATIVE REGISTER, and comes to the subscriber after the 25th of each month.

Availability

The complete code and the upkeep service are distributed to the county law libraries; to the libraries of the University of Wisconsin Law School and Marquette University Law School; to the State Historical Society; to the Legislative Reference Bureau and to the State Law Library, and to certain designated public libraries throughout the state.

The sale and distribution of the code and of its parts is handled by Department of Administration, Document Sales and Distribution, 202 S. Thornton Ave., Madison, Wisconsin 53702.

History Notes

Each page of the code as it was originally filed and printed pursuant to the 1955 legislation, is dated "1-2-56". A rule which is amended or created subsequent to the original printing date is followed by a history note indicating the date and number of the REGISTER in which it was published and the date on which the amendment or the rule became effective. The absence of a history note at the end of a section indicates that the rule has remained unchanged since the original printing in 1956. The date line at the bottom of the page indicates the month in which the page was released.

In some instances an entire code has been repealed and recreated subsequent to the original printing date. When this occurs a history note has been placed at the beginning of the chapter to contain this information. A separate history note appears after each section indicating the date when the revision became effective.

Chapter Ind 50

Administration and Enforcement

Part I—Purpose and Scope

Ind 50.01 Purpose of code (p. 1)
Ind 50.02 Scope of code (p. 1)

Part II—Application of Building Code

Ind 50.03 Application (p. 2)
Ind 50.04 Buildings exempt from code requirements (p. 2)
Ind 50.05 Existing buildings code (p. 3)
Ind 50.06 Local regulations (p. 3)

Part III—Design and Supervision

Ind 50.07 Design (p. 3)
Ind 50.08 Plans, specifications and calculations prepared outside Wisconsin (p. 4)
Ind 50.09 Changes to plans and specifications (p. 4)
Ind 50.10 Supervision (p. 4)
Ind 50.11 Owner’s responsibility (p. 5)

Part IV—Department Approval

Ind 50.12 Plan examination and approval (p. 5)
Ind 50.13 Footing and foundation approval (p. 9)
Ind 50.14 Permit to start construction (p. 9)
Ind 50.15 Evidence of plan approval (p. 9)
Ind 50.16 Revocation of approval (p. 9)
Ind 50.17 Department limitation and expiration of plan approval (p. 10)
Ind 50.18 Inspections (p. 10)
Ind 50.19 Approval of materials, equipment and devices (p. 10)
Ind 50.20 Fees (p. 10)

Part V—First Class City and Certified Cities Approvals

Ind 50.21 First class city examination and approval (p. 10)
Ind 50.22 Certified cities examination and approval (p. 11)

Part VI—Enforcement, Petition for Modification, Appeals, and Penalties

Ind 50.23 Enforcement (p. 11)
Ind 50.24 Appeals (p. 11)
Ind 50.25 Petition for modification (p. 11)
Ind 50.26 Penalties (p. 12)

Notes: Chapter Ind 50 as it existed on December 31, 1976, was repealed and a new chapter Ind 50 was created effective January 1, 1977.

Part I—Purpose and Scope

Ind 50.01 Purpose of code. The purpose of this code is to protect the health, safety and welfare of the public and employees by establishing minimum standards for the design, construction, structural strength, quality of materials, adequate egress facilities, sanitary facilities, natural lighting, heating and ventilating, energy conservation, and fire safety for all public buildings and places of employment.

Note 1: The purpose as stated can be traced to the terms used in the “safe place” statutes, ch. 101, Stats.

Note 2: This code is intended for the protection of the public and is not intended as a design manual, a textbook or a construction manual.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 50.02 Scope of code. The provisions of this code shall apply to all public buildings and places of employment. The term “building or structure” as hereinafter used in this code shall mean public building or place of employment. The provisions of this code are not retroactive unless specifically stated in the administrative rule. Where different sections of Register, December, 1978, No. 276 Building and heating, ventilating and air conditioning code
this code specify different requirements, the most restrictive requirement shall govern. The appendix provides explanatory material related to specific code requirements.

Note: For a definition of “public building” and “place of employment,” see ss. Ind 51.01 (102a) and 51.01 (104a) or s. 101.01 (1), Stats.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77

SPECIAL NOTE

AN ASTERISK (*) FOLLOWING THE SECTION OR SUBSECTION NUMBER INDICATES EXPLANATORY MATERIAL. ON THAT PARAGRAPH MAY BE FOUND IN APPENDIX A. EXAMPLE: Ind 51.01 (16)*—SEE A-51.01 (16) IN APPENDIX A.

PART II—APPLICATION OF BUILDING CODE

Ind 50.03 Application. (1) NEW BUILDINGS AND ADDITIONS. The provisions of this code shall apply to all new buildings and structures, and also to additions to existing buildings and structures, except those indicated in section Ind 50.04.

(2) ALTERATIONS TO BUILDINGS. The provisions of this code shall apply to all remodeling or alterations in any building or structure which affect the structural strength, fire hazard, exits, natural lighting or replacement of major equipment. These provisions do not apply to minor repairs necessary for the maintenance of any building or structure nor to buildings exempt, as listed in section Ind 50.04.

(3) CHANGE OF USE. (a) If the use of an existing building or structure is changed in accordance with the definition of section Ind 51.01 (87), and the requirements for the new use are more stringent than those for the previous use, the building or structure shall be made to comply with the requirements for the new use as provided in this code.

1. Exception. Unless the requirements for the new use are modified subject to the written approval by the department.

2. Exception. An existing building undergoing a change of use will not be required to comply with the provisions of section Ind 52.04—barrier-free environments, unless the building undergoes physical remodeling in accordance with the percentages established in section Ind 52.04 (6).

(b) If, upon inspection of an existing building or structure, it is found that its use has changed and that it does not comply with the requirements of the building code in effect at the time of change, it shall be made to comply with the code requirements in effect at the time of change in use.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 50.04 Buildings exempt from code requirements. This code does not apply to the following types of buildings:

(1) One- and two-family dwellings and outbuildings in connection therewith such as barns and private garages.

(2) Buildings used exclusively for farming purposes.

Note: For a definition of “farming,” see s. 102.04 (3), Stats.
(3) Buildings used primarily for housing livestock or for other agricultural purposes, located on research or laboratory farms of public universities or other state institutions.

(4) Temporary buildings, used exclusively for construction purposes, not exceeding 2 stories in height, and not used as living quarters.

(5) Buildings located on Indian reservation land held in trust by the United States.

**Ind 50.05** **Existing buildings code.** Buildings and structures erected prior to the effective date of the first building code (October 9, 1914) shall comply with the general orders or existing buildings, Wis. Adm. Code chapters Ind 160-164, issued by the department. Buildings and structures constructed after October 9, 1914 shall comply with the code in effect at the time.

**History:** Cr. Register, December, 1976, No. 252, eff. 1-1-77.

**Ind 50.06** **Local regulations.** This code shall not limit the power of cities, villages and towns to make, or enforce, additional or more stringent regulations, provided the regulations do not conflict with this code, or with any other rule of the department, or law.

**History:** Cr. Register, December, 1976, No. 252, eff. 1-1-77.

**PART III—DESIGN AND SUPERVISION**

**Ind 50.07** **Design.** Every new building, or alteration to a building, shall be designed in compliance with this code.

(1) **Buildings containing not more than 50,000 cubic feet total volume.** The plans and specifications for every new building, or alteration to a building, containing not more than 50,000 cubic feet total volume, or addition to a building in which the volume of the addition results in the entire building containing not more than 50,000 cubic feet total volume, may be prepared by a registered architect, engineer, designer, contractor or owner or his [her] authorized agent.

(2) **Buildings containing more than 50,000 cubic feet total volume.** The plans and specifications for every new building, or alteration to a building, containing more than 50,000 cubic feet total volume, or addition to a building in which the volume of the addition results in the entire building containing more than 50,000 cubic feet total volume, shall be designed as follows:

(a) **Building or structural design.** The plans and specifications for the design of the building or structure shall be prepared, signed and sealed by a Wisconsin registered architect or engineer.

(b) **Heating, ventilating and air conditioning design.** The plans and specifications for the heating, ventilating and air conditioning system shall be prepared, signed and sealed by a Wisconsin registered architect, engineer or designer.

(c) **Energy conservation design.** The plans and specifications for energy conservation design, including illumination, shall be prepared,
signed and sealed by a Wisconsin registered architect, engineer or designer.

Note 1: See section Ind 61.01 (139a) for definition of total volume.

Note 2: The above terms "registered architect, engineer or designer" mean registered architect, registered professional engineer or registered designer as defined by laws regulating the practice of engineering and architecture found in ch. 443, Stats. Registered designers are limited to the specific designations outlined in Wis. Adm. Code section A 12.1.20. See section A 51.04 for rules pertaining to signing, sealing and dating of plans prepared by registered architect, engineer or designer.

Note 3: According to s. 87.30, Stats., the construction or placement of every building, structure, fill or development placed or maintained within any flood plain is required to satisfy local or state regulations.

History: Cr. Register, December, 1978, No. 252, eff. 1-1-77; am. (2) (a) and (b), cr. (2) (c), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 50.08 Plans, specifications and calculations prepared outside Wisconsin. Plans, specifications and calculations for buildings and structures, in accordance with the requirements of section Ind 50.07 (2), may be prepared by an architect or engineer registered outside of the state of Wisconsin, provided the following conditions are satisfied:

1. Seal. The plans, specifications and calculations shall bear the signature and seal or stamp of the architect or engineer registered in a state other than Wisconsin.

2. Certificate. A certificate, dated, signed and sealed by an architect or engineer registered in Wisconsin, shall be attached to the plans, specifications and calculations. The certificate shall indicate that the plans, specifications and calculations were prepared in a state other than Wisconsin by an architect or professional engineer registered in that state; describe the work performed by the Wisconsin registered architect or engineer; and include statements to the effect that the plans and specifications have been reviewed and comply with all applicable local and state building codes, and that the reviewing architect or engineer will be responsible for the supervision of construction in accordance with the requirements of section Ind 50.10.

History: Cr. Register, December, 1978, No. 252, eff. 1-1-77.

Ind 50.09 Changes to plans and specifications. No change in plans or specifications, which involve any provisions of this code, shall be made unless such change is signed, sealed and dated by the architect, engineer or designer who made the change, and approved by the department.

History: Cr. Register, December, 1978, No. 252, eff. 1-1-77.

Ind 50.10 Supervision. All constructions or installations described in section Ind 50.07 (2) shall be supervised by a Wisconsin registered architect or engineer, except that a Wisconsin registered designer may supervise the installation of heating, ventilating and air conditioning systems. The person responsible for supervision shall also be responsible for the construction and installation being in substantial compliance.
with the approved plans and specifications. Should the supervising architect, engineer, designer, or the department, be confronted with a non-conformance to the code during, or at the end of, construction, said parties, together with the designing architect, engineer or designer shall effect compliance.

(1) **DEFINITION.** Supervision of construction is a professional service, as distinguished from superintending of construction by a contractor, and means the performance, or the supervision thereof, of reasonable on-the-site observations to determine that the construction is in substantial compliance with the approved plans and specifications.

(2) **NAME OF SUPERVISING ARCHITECT, ENGINEER OR DESIGNER.** Prior to the start of construction, the owner of the building or structure, whose name must be a part of, or accompany, all plans submitted for approval, as required by section Ind 50.12 or his [her] authorized agent, shall designate to the department, in writing, the name and registration number of the architect, engineer or designer retained to supervise construction of the building or structure.

(3) **COMPLETION STATEMENT.** Upon completion of the construction, the supervising architect, engineer or designer shall file a written statement with the department certifying that, to the best of his/her knowledge and belief, construction has been performed in substantial compliance with the approved plans and specifications.

**History:** Ch. Register, December, 1976, No. 262, eff. 1-1-77.

**Ind 50.11 Owner's responsibility.** No owner shall construct or alter any building or structure, or portion of a building or structure, or permit any building or structure to be constructed or altered except in compliance with the provisions of sections Ind 50.07, 50.08, 50.09, 50.10 and 50.12. Compliance with the provisions of this section does not relieve the owner from compliance with the administrative rules established in other related codes.

**History:** Ch. Register, December, 1976, No. 262, eff. 1-1-77.

**PART IV—DEPARTMENT APPROVAL**

**Ind 50.12 Plan examination and approval.** (1) **Types of buildings.** Plans and specifications for all buildings and structures in the following classifications shall be submitted to the department for examination and approved before commencing work:

**Note 1:** See the scope of the occupancy chapters for examples of specific types of buildings covered in the categories (a) through (f).

**Note 2:** Section 101.12 (3) (b), State, prohibits local issuance of permits or licenses for construction or use of public buildings or places of employment until drawings and calculations have been examined and approved by the department.

(a) Factories, office and mercantile buildings (chapter Ind 64).

1. Department examination and approval for factories, office and mercantile buildings containing less than 25,000 cubic feet total volume

*See Appendix A for further explanatory material.*
is waived; however, the buildings shall comply with the applicable requirements of this code.

(b) Theaters, assembly halls, and places of outdoor assembly (chapter Ind 65).

(c) Schools and other places of instruction (chapter Ind 66).

(d) Apartment buildings, hotels and places of detention (chapter Ind 57).

(e) Hazardous occupancies (sections Ind 54.50, 54.52 and chapter Ind 62, respectively). Plan submission for hangars storing one airplane is waived.

(f) Day care facilities (chapter Ind 60).

(g) Structures [see Ind 51.01 (125)].

1. Department examination and approval is waived for television and radio transmitting and receiving antennas, outdoor theater screens, water tanks, display signs, observation towers, docks, piers, wharves, tents or inflatable structures used temporarily, and other similar structures; however, such structures and temporary tents shall comply with the applicable structural and other requirements of this code.

2. The replacement of a major piece of heating equipment is subject to written approval by the department.

(a) General building plans.

(b) Structural plans.

(c) Heating and ventilating plans.

1. Approval is not required for the installation of air-cooling equipment when added to an approved heating system.

2. The replacement of a major piece of heating equipment is subject to written approval by the department.

(d) Alteration plans for existing buildings.

(e) Revisions to previously examined plans.

(f) Exhaust system plans (government-owned buildings only).

(g) Spray booth plans (government-owned buildings only).

(h) Footing and foundation plans (see section Ind 50.13).

(i) Stadium, grandstand and bleacher plans.

(j) Fire escape plans.

(3) PLANS AND SPECIFICATIONS. At least 3 complete sets of plans, which are clear, legible and permanent copies, and one copy of specifications
shall be submitted for examination and approval before commencing construction. The plans and specifications shall contain the following information:

(a) General. All plans shall contain the name of the owner and the address of the building. The name and seal of the architect(s), engineer(s) or person(s) who prepared the plans shall appear on the title sheet, in accordance with Wis. Adm. Code section A-E 1.04 (4) registration seals.

(b) General building plans. The general building plans shall include the following:

1. Plot plan. The location of the building with respect to property lines and/or lot lines and/or adjoining streets, alleys and any other buildings on the same lot or property shall be indicated on the plot plan. A small scale plot plan shall be submitted on a 8½ x 11 sheet for projects containing multiple buildings.

2. Floor plans. Floor plans shall be provided for each floor. The size and location of all rooms, doors, windows, firewalls, toilet facilities, structural features, exit passageways, exit lights, fire alarms, standpipes, stairs and other pertinent information shall be indicated. Schematic exit plans shall be provided for large buildings, indicating normal paths of egress.

3. Elevations. The elevations shall contain information on the exterior appearance of the building and indicate the location and size of doors, windows, roof shape, chimneys, exterior grade, footings and foundation walls, and include information about the exterior materials.

4. Sections and details. Sections and details shall include information to clarify the building design.

(c) Heating, ventilating and air conditioning plans. Heating, ventilating and air conditioning plans shall indicate the layout of the system, including location of equipment and size of all piping, ductwork, dampers (including fire dampers), chimneys, vents and controls. The quantity of outside air introduced to each zone, and the quantity of supply air and exhaust air for each room shall be listed on the plans. The type of equipment and capacity (including the input and output) shall be indicated on the plans or equipment schedules, unless indicated in the specifications.

(d) Specialty plans. Specialty plans for spray booths, special exhaust systems, stadiums, grandstands and bleachers, fire escapes and special structural systems shall include pertinent information with respect to the design and construction of the specialty.

(e) Specifications. The specifications shall be properly identified with the drawings and describe the quality of the materials and the workmanship.

(f) Schedules. Schedules shall be provided which contain information pertinent to doors, room finishes, equipment, and the use of all rooms and the number of occupants accommodated therein, unless this information is indicated on the plans.
(4) **DATA REQUIRED.** All plans submitted for approval shall be accompanied by sufficient data and information for the department to judge if the design of the building, the capacity of the equipment, and the performance of the system will meet the requirements of this code. The following data shall be submitted:

(a) **Structural data.** Sample structural calculations, including assumed bearing value of soil, live loads and itemized dead loads, unit stresses for structural materials, stress diagrams for trusses, typical calculations for slabs, beams, girders and columns, and diagrams indicating bracing and stability of the structure and components in rigid frames and other open type buildings shall be submitted. Complete structural calculations shall be furnished upon request of the department or other authorized approving official.

Note: Diagrams are intended to apply to the appropriate final designs of buildings regardless of materials of construction. For job bracing of buildings, see Wis. Adm. Code chapter Ind 35, a supplement to chapters Ind 1000-2000, Wis. Safety and Health Code.

(b) **Thermal performance data.** Thermal performance calculations shall be submitted in accordance with the requirements of section Ind 63.12.

(c) **Heating and ventilating data.** A description of the construction for the walls, floors, ceilings and roof, and the transmission coefficients of the construction materials shall be furnished. The calculations shall include heat losses for the individual rooms (including transmission and infiltration and/or ventilation losses, whichever are greater) and a summary of the total building heat loss expressed in Btu/hour or watts.

Note: The department will accept as the basis for calculations and design data, the methods and standards recommended by the Mechanical Contractors' Association of America; the American Society of Heating, Refrigerating and Air Conditioning Engineers; and the Institute of Boiler and Radiator Manufacturers.

(d) **Additional data.** When requested, additional data pertaining to design, construction, materials and equipment shall be submitted to the department for approval.

(5) **APPLICATION FOR APPROVAL.** A plans approval application form shall be included with the plans submitted to the department for examination and approval.

Note: See Appendix A for an example of the plans approval application (form SB-112).
conform to the provisions of this code, a conditional approval, in writing, will be granted. All non-code-complying conditions stated in the conditional approval shall be corrected before or during construction. A conditional approval issued by the department shall not be construed as an assumption of any responsibility for the design or construction of the building.

(b) **Denial of approval.** If the department determines that the plans or the application do not substantially conform to the provisions of this code, the application for conditional approval will be denied, in writing.

Note: A letter will be sent to the designer and the owner of record with a statement relating to the examination of the plans and citing the conditions of approval or denial. The plans will be dated and stamped "conditionally approved" or "not approved," whichever applies. At least 2 copies of the plans will be returned to the person designated on the plans approval application; one copy will be retained by the department.

**History:** Cr. Register, December, 1976, No. 252, eff. 1-1-77; amn. (1) (c) 1, Register, December, 1977, No. 264, eff. 1-1-78; amn. (4) (h), Register, May, 1978, No. 269, eff. 7-1-78; amn. (1) (g) (Intro.), Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 50.13 Footing and foundation approval.** Upon submission of the plans approval application form, at least 3 sets of footing and foundation plans, a plot plan, schematic floor plans locating exits, elevations, itemized structural loads, structural foundation calculations, and a fee, the department may conditionally approve the footing and foundation plans to permit construction of the footings and foundations prior to the examination and approval of the complete plans.

**History:** Cr. Register, December, 1976, No. 252, eff. 1-1-77.

**Ind 50.14* Permit to start construction.** Upon submission of the plans approval application form, 3 complete sets of building plans and one copy of specifications, a written request by the owner to start construction, and a fee, the department may issue a permit to start construction of the footings and foundations. The holder of the permit shall proceed at his [her] own risk without assurance that a conditional approval for the building will be granted.

Note: A permit to start construction (form SB-196) is illustrated in the Appendix.

**History:** Cr. Register, December, 1976, No. 252, eff. 1-1-77.

**Ind 50.15 Evidence of plan approval.** The architect, engineer, designer, builder or owner shall keep at the building site one set of plans bearing the stamp of conditional approval and a copy of the specifications. The plans shall be open to inspection by an authorized representative of the department.

**History:** Cr. Register, December, 1976, No. 262, eff. 1-1-77.

**Ind 50.16 Revocation of approval.** The department may revoke any approval, issued under the provisions of this code, for any false statements or misrepresentation of facts on which the approval was based.

**History:** Cr. Register, December, 1976, No. 262, eff. 1-1-77.

*See Appendix A for further explanatory material.*
Ind 50.17 Department limitation and expiration of plan approval. (1) Expiration of Plan Approval. Plan approval by the department or its authorized representative shall expire one year after the date indicated on the approved plans if construction has not commenced within that year.

Note: According to s. 66.05 (1) (a), State, the local governmental body or building inspector may order the razing of buildings or structures, or portions thereof, where there has been a cessation of normal construction for more than 2 years.

(2) Department limitation. A conditional approval of a plan by the department shall not be construed as an assumption of any responsibility for the design.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 50.18* Inspections. Inspections shall be conducted by an authorized representative of the department to ascertain whether or not the construction or installations conform to the conditionally approved plans, the conditional approval letter, and the provisions of this code.

Note: See Appendix A for an example of the inspection progress report (form SB-223H) and inspection report and orders (form SB-2).

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 50.19 Approval of materials, equipment and devices. All materials, equipment and devices not specifically mentioned in this code will be permitted if approved in writing by the department. Sufficient data, tests and other evidence to prove that the material, equipment or device is equivalent to the standards required in this code shall be submitted. Upon receipt of a fee and a written request, the department may issue an approval number for the material, piece of equipment or device.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 50.20* Fees. Fees for petitions for modification, material approval, plan examination and approval, and for inspection of buildings, structures, and heating and ventilating shall be submitted in accordance with the provisions of Wis. Adm. Code section Ind 69.09. Fees shall be submitted at the time the application for approval is submitted. No plan examinations, approvals or inspections will be made until the fees are received.

Note: See Appendix A, reprint of section Ind 69.09, for determination of fees.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

PART V--FIRST CLASS CITY AND CERTIFIED CITIES APPROVALS

Ind 50.21 First class city examination and approval. Drawings, specifications and calculations for all buildings and structures, except state-owned buildings and structures, to be constructed within the city limits of Milwaukee shall be submitted to the inspector of buildings, Milwaukee, for examination and approval.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

*See Appendix A for further explanatory material.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Administration and enforcement.

Ind 50.22 Certified cities examination and approval. Drawings, specifications and calculations for all new buildings and structures containing less than 50,000 cubic feet total volume and alterations to buildings containing less than 100,000 cubic feet total volume, except state-owned buildings and structures, shall be submitted to cities certified by the department for examination and approval according to requirements of this code. Drawings, specifications and calculations submitted to said cities for examination and approval need not be submitted to the department. The buildings must be located within the city limits of the certified city.

Note: The following cities have been certified by the department:

- Appleton
- Beloit
- Brookfield
- Cedarburg
- Eau Claire
- Fond du Lac
- Glenwood
- Green Bay
- Greenfield
- Janesville
- Kaukauna
- Kenosha
- La Crosse
- Madison
- Mauston
- Milwaukee
- New Berlin
- Oshkosh
- Racine
- Sheboygan
- Stevens Point
- Two Rivers
- Waukesha
- Wauwatosa
- West Allis
- West Bend
- Wisconsin Rapids

History: CR. Register, December, 1976, No. 252, eff. 1-1-77.

PART VI—ENFORCEMENT, PETITION FOR MODIFICATION, APPEALS, AND PENALTIES

Ind 50.23 Enforcement. The provisions of this code shall be enforced by the department, or by municipal officials or other local officials who are required by law to enforce the administrative rules of the department.

History: CR. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 50.24 Appeals. Any person affected by any local order which is in conflict with a rule of the department may petition the department for a hearing on the ground that the local order is unreasonable and/or in conflict with the rule of the department.

Note: Section 101.01 (1) (g), Stats., defines "local order" as any ordinance, order, rule or determination of any common council, board of aldermen, board of trustees or the village board, of any village or city, or the board of health of any municipality, or an order or direction of any official of such municipality, upon any matter over which the department has jurisdiction.

History: CR. Register, December, 1976, No. 253, eff. 1-1-77.

Ind 50.25* Petition for modification. The department will consider and may grant modification to an administrative rule upon receipt of a fee, a completed petition for modification form from the owner, and a position statement from the fire department having responsibility and an interest in the rule, provided an equivalent degree of safety is established in the petition for modification which meets the intent of the rule being petitioned. The department may impose specific conditions in a petition for modification to promote the protection of the health, safety or welfare of the employees or the public. Violation of those conditions

*See Appendix A for further explanatory material.
The purpose of this report is to provide a further explanation regarding the

American Indian Education Program and its impact on education in the United States. The program is designed to improve educational opportunities for American Indian students by providing additional resources and support.

The program focuses on addressing the unique needs of American Indian students, including cultural and linguistic support, and seeks to enhance their academic performance. It aims to bridge the gap between the educational achievements of American Indian students and their non-American Indian peers, thereby promoting equity and excellence in education.

The report also highlights the challenges faced by American Indian students, including language barriers, cultural disconnectedness, and systemic issues within the educational system. It advocates for a comprehensive approach that acknowledges the historical, cultural, and social contexts that impact educational outcomes for American Indian students.

In conclusion, the American Indian Education Program plays a crucial role in ensuring that American Indian students have equal access to quality education and have the opportunity to thrive academically. By addressing the specific needs of American Indian students, the program contributes to the overall goal of creating a more equitable and inclusive educational environment.

### Ind 51.01 Definitions

1. **Accessory Room.** Any room or enclosed floor space used for eating, cooking, bathrooms, water closet compartments, laundries, pantries, foyers, hallways, and other similar floor spaces. Rooms designated as recreation, study, den, family room, office, etc., in addition to habitable rooms, are considered accessory rooms.

2. **Alley.** Any legally established public thoroughfare less than 30 feet in width but not less than 10 feet in width whether designated by name or number.

3. **Approved.** Approval granted by the department under the regulations stated in this code.

4. **Area (Gross).** The maximum horizontal projected area within the perimeter of the outside surface of walls or supports of the building or structure. Exterior cantilever open balconies are not included.

5. **Area (Net).** The occupied or usable floor area in a building but not including space occupied by columns, walls, partitions, mechanical shafts or ducts.

6. **Araway.** Exterior area whose grade is below the grade (at building) and having at least one side consisting of the exterior wall of a building.

---

*See Appendix A for further explanatory material.*
(6) Attic. The space not used for human occupancy located between the ceiling of uppermost story and the roof.

(7) Automatic. Automatic as applied to a fire protective device, is one which functions without human intervention and is actuated as a result of the predetermined temperature rise, rate of rise of temperature, combustion products or smoke density such as an automatic sprinkler system, automatic fire door, automatic fire shutter, or automatic fire vent.

(7a) Automatic Fire Sprinkler System. An automatic fire sprinkler system is an integrated system of underground and overhead piping designed in accordance with fire protection engineering standards. The system includes a suitable water supply, such as a gravity tank, fire pump, reservoir or pressure tank or connection beginning at the building side of an approved check valve or approved backflow preventing device located at or near the property line where the pipe or piping system provides water used exclusively for fire protection and related appurtenances and to standpipes connected to automatic sprinkler systems. The portion of the sprinkler system above ground is a network of specially sized or hydraulically designed piping installed in a building, structure or area, generally overhead, and to which sprinklers are connected in a systematic pattern. The system includes a controlling valve and a device for actuating an alarm when the system is in operation. The system is usually activated by heat from a fire and discharges water over the fire area.

(8) Balcony (exterior). An elevated platform attached to a building and enclosed on one or more sides by railings.

(9) Balcony (interior). An open intermediate level or stepped floor. Also see “Stories, Number of.”

(10) Basement. A basement floor is that level below the first or ground floor level with its entire floor below exit discharge grade.

(11) Bearing Wall. See “Wall (bearing).”

(12) Building.* A structure for support, shelter or enclosure of persons or property.

(13) Building Height. See “Height (building).”

(14) Buttress. A structural projection which is an integral part of a wall, primarily to provide resistance to lateral forces.

(15) Cavity Wall. See “Wall (cavity).”

(16) Ceiling Protection. The fire protection membrane suspended beneath the floor or ceiling construction which, when included with the construction, develops the fire-resistant rating for the overall assembly.

(17) Closing Device (Fire Door). A closing device is one which will close the door and be adequate to latch and/or hold hinged or sliding door in a closed position.

*See Appendix A for further explanatory material.
(a) **Automatic.** An automatic closing device is one which functions without human intervention and is actuated as a result of the predetermined temperature rise, rate of rise of temperature, combustion products or smoke density.

(b) **Self-closing.** A self-closing device is one which will maintain the door in a closed position.

(18) **COMBUSTIBLE CONSTRUCTION.** An assembly such as a wall, floor or roof having components of combustible material.

(19) **COMBUSTIBLE MATERIAL.** All materials not classified as "noncombustible" are considered combustible. This property of a material does not relate to its ability to structurally perform under fire exposure. The degree of combustibility is not defined by standard fire test procedures.

(20) **Concrete.** See "Types of Concrete," section Ind 51.045 (1) (a).

(21) **Construction.** Includes all labor and materials used in the framing or assembling of component parts in the erection, installation, enlargement, alteration, repair, moving, conversion, razing, demolition or removal of any appliance, device, building, structure or equipment.

(22) **Corridor.** An enclosed passageway in a building for public ingress and egress to and from dwelling units, rooms or other areas and leading to a lobby, foyer or exit discharge.

(22a) **Corridor (required exit).** A fire-rated enclosure beginning at the end point of maximum allowable exit distance and continuing to the exit discharge door.

*Note: See line 20 of Table 51.03-A.*

(23) **Court.** A court is an open, exterior space providing required natural light or ventilation for the building or providing a pathway for public egress from a building exit to a public thoroughfare.

(24) **Court (inner).** An inner court is a court surrounded on all sides by walls.

(25) **Court (inner lot line).** An inner lot line court is a court bounded on 3 sides by walls and on the remaining side by a lot line or property line.

(26) **Court (outer).** An outer court is a court bounded on 3 sides with walls and on the remaining side by a street, alley or other open space not less than 15 feet wide.

(27) **Court (outer lot line).** A court with one side on a lot line or property line and opening to a street or open space not less than 15 feet wide.

(28) **Curtain Wall.** See "Wall (curtain)."

(29) **Department.** Means the department of industry, labor and human relations.

(30) **Division wall.** See "Wall (division)."

*See Appendix A for further explanatory material.*
(31) **Duct.** Any pipe, flue, or tunnel used to convey air, gases and entrained materials. An underground duct is any part of a duct that is below the surface of the ground.

(32) **Duct Furnace.** See "Furnace (duct)."

(33) **Elevator.** See Wis. Adm. Code, chapter Ind 4.

(34) **Equipment.** Self-contained systems and apparatus attached to or built into the building and used for mechanical or electrical processing, comfort, safety, sanitation, communication or transportation within a building.

(35) **Exhaust Ventilating System.** See "Ventilating System (exhaust)."

(36) **Existing.** A building, structure, or equipment completed or in the course of construction or use or occupied prior to the effective date of applicable rules of this code.

(37) **Exit Court.** See "Court (exit)."

(38) **Exit Discharge Grade.** See "Grade (exit discharge)."

(39) **Exit (vertical).** See "Vertical Exit."

(40) **Exterior Balcony.** See "Balcony (exterior)."

(41) **Exterior Wall.** See "Wall (exterior)."

(41a) **Factory.** A factory is any premises wherein labor is used in manufacturing, making or altering or adapting articles for the purpose of trade or gain.

(42) **Family.** Means 2 or more individuals who are related to each other by blood, marriage, adoption or legal guardianship. For purposes of this code a group of not more than 4 persons not necessarily related by blood or marriage, living together in a single living unit will be considered equivalent to a single family.

(42a) **Farm Operation.** The farm operation is the planting and cultivating of the soil and growing of farm products substantially all of which have been planted or produced on the farm premises.

**Notes:** The farm operation, according to s. 102.04 (3), Stats., includes: the management, conserving, improving and maintaining of the premises, tools, equipment, improvements and the exchange of labor or services with other farmers; the processing, drying, packing, packaging, freezing, grading, storing, delivery to storage, carrying to market or to a carrier for transportation to market and distributing directly to the consumer; the clearing of such premises and the salvaging of timber and the management and use of wood land thereon but does not include logging, lumbering and wood-cutting operations unless the operations are conducted as an accessory to other farm operations.

(42b) **Farm Premises.** The farm premises is defined to be the area which is planted and cultivated. The farm premises does not include greenhouses, structures or other areas unless used principally for the production of food or farm products.

*See Appendix A for further explanatory material.*
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Definitions and standards

(42c) FARM PRODUCTS. Farm products are defined as agricultural, horticultural and arboricultural crops. Animals considered within the definition of agricultural include livestock, bee, poultry, fur-bearing animals, and wildlife or aquatic life.

(42d) FARMING. Farming means the operation of a farm premises owned or rented by the operator.

(43) FIRE DOOR. A door so constructed as to give protection against the passage of fire.

(44) FIRE DOOR ASSEMBLY. The assembly of fire door and its accessories, including all hardware, frames, closing devices and their anchors, so constructed as to give protection against the passage of fire.

(45) FIRE DOOR CLOSING DEVICE. See "Closing Device (fire door)."

(46) FIRE RESISTANCE AND FIRE-RESISTIVE MATERIAL. Having the property to withstand fire or give protection from it. As applied to elements of building, it is characterized by the ability to confine a fire or to continue to perform a given structural function, or both.

(47) FIRE-RESISTIVE CLASSIFICATION. Fire-resistive classification is the time in hours during which a material or assembly continues to exhibit fire resistance under conditions of tests and performance as specified in ASTM E-119, ASTM E-152 and ASTM E-163.

(48) FIRE-RESISTIVE PROTECTION. An insulating material applied directly, attached to, or suspended from a structural assembly, to maintain the structural integrity of a member or system for the specified time rating.

(49) FIRE-RESISTIVE PROTECTION, DIRECTLY APPLIED. A coating material applied directly to the structural element for the purpose of fire protection.

(50) FIRE-RESISTIVE RATING. Refer to fire-resistive classification.

(51) FIRE-RETARDANT ROOF COVERINGS. Roof coverings shall be classified on the basis of protection provided against fire originating outside the building or structure on which they have been installed.

(a) Class A roof coverings are those which are effective against severe fire exposures (meeting the 3 methods for fire tests of class A roof coverings [ASTM Standard E-108] and possess no flying brand hazard.

(b) Class B roof coverings are those which are effective against moderate fire exposures (meeting the 3 methods for fire tests of class B roof coverings [ASTM Standard E-108]) and possess no flying brand hazard.

(c) Class C roof coverings are those which are effective against light fire exposures (meeting the 3 methods for fire tests of class C roof coverings [ASTM Standard E-108]) and possess no flying brand hazard.

(52) FIRE-RETARDANT-TREATED WOOD. Fire-retardant wood includes lumber or plywood that has been treated with a fire-retardant chemical

*See Appendix A for further explanatory material.
to provide classifications (flame-spread [FSC] and fuel contributed [FCC]) of 25 or less by ASTM method E-84, shows no progressive combustion during 30 minutes of fire exposure by this method, and is so labeled. Fire-retardant wood for decorative and interior finish purposes provides reduced flame-spread classification (FSC) by ASTM method E-84 as specified by the code for materials used in the particular applications.

(53) **Fire Window Assembly.** A fire window includes glass, frame, hardware and anchors constructed and glazed to give protection against the passage of flame.

(54) **First Floor.** The first floor is the primary floor used in determining the number of stories of a building.

(55) **Flame-spread classification.** Flame-spread classification (FSC) is a comparative rating of the measure of flame-spread on a surface of a material or assembly as determined under conditions of tests and performance as specified in ASTM E-84.

(56) **Flame-spread rating.** Refer to flame-spread classification.

(56a) **Floor.** The bottom or lower part of an enclosed space including any portions raised or depressed by not more than 3 feet from the designated principal level where the raised or depressed portion is treated architecturally as a part of the same principal level.

(57) **Floor Area.** See "Area (net)."

(57a) **Floor level.** The upper surface of a floor treated architecturally as the designated principal floor at a given elevation.

(58) **Foyer.** An enclosed space and passageway into which aisles, corridors, stairways, or elevators may exit and from which the public has access to exits.

(59) **Front Yard.** See "Yard (front)."

(60) **Fuel contributed classification.** Fuel contributed classification (FCC) is a comparative measure of the fuel contribution of a material or an assembly in the flame-spread test per ASTM E-84.

(61) **Furnace.** A completely self-contained direct-fired, automatically controlled, vented appliance for heating air by transfer of heat of combustion through metal to the air and designed to supply heated air through ducts to spaces remote from the appliance location.

(62) **Furnace (duct).** A suspended direct-fired heating appliance normally installed in air ducts. Air circulation is provided by a blower not furnished as part of the appliance.

(63) **Grade (at building).** Elevation of surface of paved or unpaved ground adjacent to wall of a building.

(64) **Grade (exit discharge).** The elevation of finished exterior surface of paved or unpaved ground at any exit discharge doorsill.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

(65) GRAVITY EXHAUST VENTILATION. See "Ventilation (gravity exhaust)."

(66) GROSS AREA. See "Area (gross)."

(67) GROUND FLOOR. A ground floor is that level of a building on a sloping or multilevel site which has its floor line at or not more than 3 feet above exit discharge grade for at least one-half of the required exit discharges.

(67a) HABITABLE ROOM.* Any room or enclosed floor space arranged for living and/or sleeping purposes.

(68) HAZARDOUS PIPING. See "Piping (hazardous)."

(69) HEATING SYSTEM. Any combination of building construction, machinery, devices or equipment, so proportioned, arranged, installed, operated, and maintained as to produce and deliver in place the required amount and character of heating service.

(70) HEIGHT (BUILDING). Height of a building is measured from the average of the exit discharge grade elevation of all required first story exits to the top of a level roof or to a point 1/3 of the distance between the intersection of the exterior wall surface (extended) with the roof surface, and the highest part of the roof but not to include penthouses.

*Note: For exceptions to penthouses see definition "Stories, Number of."

(71) HOLLOW BONDED WALL. See "Wall (hollow bonded)."

(72) INNER COURT. See "Court (inner)."

(73) INNER LOT LINE COURT. See "Court (inner lot line)."

(74) INTAKE (OUTSIDE AIR). See "Outside Air Intake."

(75) INTERIOR BALCONY. See "Balcony (interior)."

(76) JACKETED STOVE. See "Stove (jacketed)."

(76a) LIVING UNIT. Any enclosed floor space consisting of one or more habitable rooms (with or without accessory rooms) used by a person(s) or family.

(77) LOBBY. An enclosed space into which aisles, corridors, stairways, elevators or foyer may exit and provide access to exits.

(78) LOT LINE. A legally established line dividing one lot, plot of land or parcel of land from an adjoining lot or plot of land or parcel of land.

(79) MAJOR APPARATUS. Central air-handling equipment supplying more than one occupancy or rooms and heat-producing equipment generating heat for the heating and ventilating system.

(80) MASONRY. A construction composed of separate units such as brick, block, hollow tile, stone or approved similar units or a combination thereof, laid up or built unit by unit and bonded by approved manner.

*See Appendix A for further explanatory material.
(81) **Mechanical Ventilation.** See "Ventilation (mechanical)."

(82) **Mezzanine or Mezzanine Floor.** An intermediate floor, either open or enclosed. Also see "Surf., Number of."

(83) **Net Area.** See "Area (net)."

(84) **Nonbearing Wall.** Refer to "Wall (exterior)" or "Partition."

(85) **Noncombustible Construction.** An assembly such as a wall, floor or roof having components of noncombustible material.

(86) **Noncombustible Material.** A noncombustible material is one which, in the form in which it is used, meets one of the requirements (a) or (b) listed below. Materials used adjacent to or in contact with heat-producing appliances, warm air ducts, plenums and chimneys shall be classified as noncombustible only on the basis of requirement (a). Noncombustible does not apply to the flame-spread characteristics of interior finish or trim materials. No material shall be classed as noncombustible building construction material which is subject to increase in combustibility or flame-spread classification (FSC) beyond the limits herein established through the effects of age, moisture or other atmospheric conditions.

**Note:** The federal trade commission does not consider ASTM E-84 as an accurate indicator of the performance of cellular plastics used in building construction under actual fire conditions, and that it is only valid as a measurement of the performance of such materials under specific, controlled test conditions. The 25 flame-spread rating is not intended to reflect hazards presented by such products under actual fire conditions. The federal trade commission considers that under actual fire conditions, such products, if allowed to remain exposed or unprotected, will under some circumstances produce rapid flame spread, quick flashover, toxic or flammable gases, dense smoke and intense and immediate heat and may present a serious fire hazard.

(a) Materials which pass the test procedure of ASTM E-136 for defining noncombustibility of elementary materials when exposed to a furnace temperature of 1,352° F. for a minimum period of 5 minutes, and do not cause a temperature rise of the surface or interior thermocouples in excess of 54° F. above the furnace air temperature at the beginning of the test and which do not flame after an exposure of 30 seconds.

(b) Materials having a structural base of noncombustible material as defined in paragraph (a), with a surfacing not more than ½ inch thick which has a flame-spread classification (FSC) not greater than 50 when tested in accordance with the method of test for surface burning characteristics of building materials (ASTM E-84).

(87) **Occupancy or Use.** The purpose for which a building, structure, equipment, materials, or premises, or part thereof, is used or intended to be used as regulated in this code.

(88) **Occupied.** Refers to any room or enclosure used by one or more persons for other than incidental maintenance.

(89) **Open Spaces.** Front (setback), rear and side yards, exit courts, outer courts, and outer lot line courts on the same property with a building as regulated by this code.
(90) OUTDOOR OPENINGS. May be doors, windows or skylights located in outside walls or roof and can be opened to provide natural ventilation to the occupied space.

(91) OUTER COURT. See "Court (outer)."

(92) OUTER LOT LINE COURT. See "Court (outer lot line)."

(93) OUTLET (SUPPLY OPENING). An opening, the sole purpose of which is to deliver air into any space to provide heating, ventilating or air conditioning.

(94) OUTSIDE AIR. Air that is taken from outside the building and is free from contamination of any kind in proportions detrimental to the health or comfort of the persons exposed to it.

(95) OUTSIDE AIR INTAKE. Includes the ducts and outdoor openings through which outside air is admitted to a ventilating, air conditioning or heating system.

(96) PANEL WALL. See "Wall (panel)."

(97) PARTITION. A partition is an interior nonbearing vertical element serving to enclose or divide an area, room or space. Portable or demountable partitions requiring tools for installation or removal are considered partitions not furniture.

(98) PARTY WALL. See "Wall (party)."

(99) PENTHOUSE. An enclosed or partially enclosed structure extending above the main roof of a building or structure and/or enclosing a stairway, tank, elevator, machinery, mechanical equipment or other apparatus and not used for human occupancy.

(100) PIER. An isolated column of masonry or concrete. A section of bearing wall not bonded on the sides into adjoining masonry shall be considered to be a pier when its horizontal dimension measured at right angles to the thickness does not exceed 4 times the thickness.

(101) PILASTER. A projection of masonry for the purpose of bearing concentrated loads, or to compensate for reduction of wall section by chases, openings or recesses, or for the purpose of stiffening the wall against lateral forces. (See also "Buttress.")

(102) PIPING (Hazardous). Any service piping conveying oxygen, flammable liquids, flammable gases or toxic gases.

(102a) PLACE OF EMPLOYMENT. The term "place of employment" includes every place, whether indoors or out or underground and the premises appurtenant thereto where either temporarily or permanently any industry, trade or business is carried on, or where any process or operation, directly or indirectly related to any industry, trade or business, is carried on, and where any person is, directly or indirectly, employed by another for direct or indirect gain or profit, but does not include any place where persons are employed in a) private domestic
service which does not involve the use of mechanical power or b) farming.

(103) Porch. An unenclosed exterior structure at or near grade attached or adjacent to the exterior wall of any building, and having a roof and floor. (See also "Terrace" and "Balcony.")

(104) Property Line. A legally established line dividing one lot, plot of land or parcel of land under one ownership from an adjoining lot or plot of land or parcel of land under another ownership.

(104a) Public Building. The term "public building" means and includes any structure, including exterior parts of such building, such as a porch, exterior platform or steps providing means of ingress or egress, used in whole or in part as a place of resort, assembly, lodging, trade, traffic, occupancy, or use by the public or by 3 or more tenants.

(105) Public Thoroughfare. Any legally established street or alley as defined herein.

(105a) Remodeling. To remodel and/or alter means to change any building or structure which affects the structural strength, fire hazard, internal circulation, or exits of the existing building or structure. This definition does not apply to maintenance, reroofing, or alterations to the heating and ventilating or electrical systems.

(106) Required. A term for mandatory use under the provisions of this code.

(106a) Required Exit Corridor. See "Corridor (Required Exit)."

(107) Restrained Support. A flexural member where the supports and/or the adjacent construction provides complete or partial restraint against rotation of the ends of the member and/or partial restraint against horizontal displacement when subject to a gravity load and/or temperature change.

(108) Retaining Wall. See "Wall (retaining)."

(109) Return (or Exhaust Opening). Any opening, the sole purpose of which is to remove air from any space being heated, ventilated or air conditioned.

(110) Roadway. That portion of a public thoroughfare devoted to vehicular traffic, or that part included between curbs.

(111) Roof. The structural cover of a building with a slope range bearing from horizontal to a maximum of 60° to the horizontal.

(112) Roof Covering. Refers to the covering applied over the roof construction for the purpose of weather or fire resistance.

(113) Roof Coverings (Fire-Retardant). See "Fire-Retardant Roof Coverings."
DEF'T. OF INDUSTRY, LABOR & HUMAN RELATIONS

Definitions and standards

(114) Room. A space within a building completely enclosed with walls, partitions, floor and ceiling, except for openings for light, ventilation, ingress and egress.

(115) SETBACK. * Refers to the open space between the property line or public thoroughfare and the nearest part of the building. Unenclosed terraces, slabs, or stoops without roofs or walls may project into this open space or setback.

(116) SHAFT. A vertical opening in a building extending through one or more stories and/or roof, other than an inner court.

(117) SHALL. A term for mandatory use under the provisions of this code.

(118) SIGNS. A structure that is intended, designed, or used for advertising, display, identification, announcements, or related purposes; this includes signs, screens, billboards, and other advertising devices of any type.

(119) SIMPLE SUPPORT. A flexural member where the supports and/or the adjacent construction allows free rotation of the ends of the member and horizontal displacement when subject to a gravity load and/or a temperature change.

(120) SPACE HEATER (GRAVITY OR CIRCULATING TYPE). A vented, self-contained free standing or wall recessed heating appliance using liquid or gas fuels. (Also see definition for "Stove (jacketed).")

(120a) STEP(s). Step(s) is a unit(s) consisting of one riser of not more than 7 7/8 inches and one tread of not less than 9 3/8 inches, alone or in a series.

(121) STORIES, NUMBER OF. * The number of stories of a multistory building includes all stories except the basement(s), ground floor(s), attic or interior balcony(ies) and/or mezzanine floor(s). Also see Ind 51.02 (14).

(122) STORY. The space in a building between the surfaces of any floor and the floor next above or below, or roof next above, or any space not defined as basement, ground floor, mezzanine, balcony, penthouse or attic. (Also see “Stories, Number of.”)

(123) STOVE (JACKETED). A vented, self-contained free standing, non-recessed heating appliance using solid, liquid or gas fuels. The effective heating is dependent on a gravity flow of air circulation over the heat exchanger. (Also see definition for “Space Heater.”)

(124) STREET. Any legally established public thoroughfare 30 feet or more in width whether designated or not by name or number such as avenue, boulevard, circle, court, drive, lane, place, road or way. All-weather hard-surfaced areas 30 feet or more in width and extending at least 60% of the length of that side of building and accessible to firefighting equipment will be acceptable in lieu of streets.

*See Appendix A for further explanatory material.
(125) STRUCTURE. A structure is an assembly of materials forming a construction for occupancy or use meeting the definition of place of employment or public building.

Note: Structures include, among others, buildings, sheds, tents, reviewing stands, observation towers, radio and television towers, water tanks, piers, wharves, shelters, canopies, and display signs.

(126) SUPPORT (RESTRAINED). See "Restraint Support."

(127) SUPPORT (SIMPLE). See "Simple Support."

(128) TEMPERED AIR. Air transferred from heated area of building.

(129) TEMPERED OUTSIDE AIR. Outside air heated before distribution.

(130) TERRACE. An unenclosed exterior structure at or near grade having a paved, floored, or planted platform area adjacent to an entrance or to the exterior walls for a building or structure and having no roof.

(131) TREATED WOOD (FIRE-RETARDANT). See "Fire Retardant-Treated Wood."

(132) UNIT HEATER (HIGH STATIC PRESSURE TYPE). A direct-fired suspended or floor standing, self-contained, automatically controlled and vented, heating appliance having an integral means for circulation of air against 0.2 inch or greater static pressure.

(133) UNIT HEATER (LOW STATIC TYPE). A direct-fired suspended, self-contained automatically controlled, vented heating appliance, having integral means for circulation of air by means of a propeller fan or fans.

(134) VENEERED WALL. See "Wall (veneer)."

(135) VENTILATING SYSTEM (EXHAUST). Any combination of building construction, machinery, devices or equipment, designed and operated to remove harmful gases, dust, fumes or vitiated air, from the breathing zone of employees and frequenters.

(136) VENTILATION. The process of supplying or removing air by natural or mechanical means, to or from any space.

(137) VENTILATION (GRAVITY EXHAUST). A process of removing air by natural means, the effectiveness depending on atmospheric condition, such as difference in relative density, difference in temperature or wind motion.

(138) VENTILATION (MECHANICAL). The process of supplying or removing air by power-driven fans or blowers.

(139) VERTICAL EXIT. A means of egress used for ascension or descension between 2 or more floors, or other levels, and shall include approved exterior stairways, automatic (moving) stairways, fire escapes, ramps, stairways, and smokeproof stair towers.

(139a) VOLUME (TOTAL). The total volume (cube or cubage) of a building is the actual cubic space enclosed within the outer surfaces of
the outside or enclosing walls and contained between the outer surfaces of the roof and the underside of the lowest floor. The volume of structures without enclosing walls (canopies, roofed shelters and similar structures) will be computed by projecting imaginary vertical planes as the enclosing walls at the outer surface of the exterior supports or columns. For cantilevered structures with interior supports, the imaginary vertical planes will be projected at the farthest roof projection or overhang.

Note: The definition of total volume requires the cube of dormers, penthouses, vaults, pilasters, enclosed porches and other enclosed appendages to be included as a part of the cube of the building. It does not include the cube of courts or light shafts, open at the top, or the cube of outside steps, cornices, parapets, or open porches or landings.

(140) **Wall.** A structural element which is vertical or within 30 degrees of vertical, serving to enclose space, form a division, or support superimposed weight.

(141) **Wall (bearing).** Any wall which supports a load in addition to its own weight.

(142) **Wall (cavity).** A wall built of masonry units or of plain concrete, or a combination of these materials, so arranged to provide an air space within the wall, and in which the facing and backing (inner and outer parts) of the wall are tied together with metal ties.

(143) **Wall (curtain).** An exterior nonbearing wall.

(144) **Wall (division).**

(a) **Building division.** A wall used for separation between 2 buildings on the same property identical in construction to a party wall.

(b) **Fire division.** A wall extending from the lowest floor level to or through the roof to restrict the spread of fire.

(145) **Wall (exterior).** Any outer enclosing wall of a building or structure.

(146) **Wall (framing).** Wall framing shall include columns, studs, beams, girders, lintels and girts.

(147) **Wall (hollow bonded).** Wall built of masonry units with or without any air space within the wall, and in which the facing and backing of the wall are bonded together with masonry units.

(148) **Wall (nonbearing exterior).** Wall which supports no vertical load other than its own weight.

(148a) **Wall (nonbearing interior).** See "Partition."

(149) **Wall (panel).** An exterior nonbearing wall in skeleton construction.

(150) **Wall (parapet).** That part of a wall entirely above the roof line.

*See Appendix A for further explanatory material.*
(151) **WALL (PARTY).** Walls used for separation between 2 buildings on the property line between adjoining properties.

(152) **WALL (RETAINING).** Wall used to resist laterally imposed pressures.

(153) **WALL (VENNERED).** Wall having facing which is attached to the backing but not so bonded as to exert common action under load.

(153a) **WAREHOUSE.** A warehouse is a place adapted to the reception and storage of goods and merchandise.

(154) **YARD (FRONT).** An open, unoccupied space unobstructed to the sky, extending across the full width of a lot, or plot of land between the street line and the base of a front building wall. Unenclosed terraces, slabs or stoops without roofs or walls may project into this open space.

**Standards for Classes of Construction**

**Ind 51.015 Scope.** This section covers minimum standards for common types of building designs currently being constructed. This section does not specifically include classification for uncommon building designs such as shells, domes, space frames, inflatable and similar types of designs. The standards contained herein shall be used as a guide for such uncommon building designs to achieve the degree of safety intended by these standards.

**Ind 51.02 General requirements.** (1) The fire-resistive ratings shown in “Classes of Construction” table 51.03-A are to satisfy the structural integrity end point for the time specified. For heat transmission end point requirements see section Ind 51.042 (5).

(2) Substitution of a building element fire-resistive rating will be permitted in any class of construction providing it is equal to or better than the required fire-resistive rating as specified in table 51.03-A.

(a) Construction requiring the use of noncombustible material shall not be replaced by combustible construction regardless of fire-resistive rating unless mentioned specifically under classes of construction standards.

(b) Noncombustible construction may be substituted for combustible construction provided the fire-resistant rating indicated in table 51.03-A is equal to or better than that noted for combustible construction.

(c) Fire-retardant treated wood exposed to high humidity or accelerated weathering shall be pressure impregnated and so identified. Subsequent to treatment, lumber 2 inches or less in thickness shall be dried to

*See Appendix A for further explanatory material.*

Register, December, 1978, No. 278
Building and heating; ventilating and air conditioning code
Definitions and standards

a moisture content of 19% or less, and plywood to a moisture content of 15% or less.

Note: The department will accept fire-retardant treated lumber and plywood which meet the standards of the American Wood Preservers Association, "Fire-Retardant Treatment by Pressure Processes," and ASTM D 2869, "Standard Methods of Test for Durability of Fire-Retardant Treatment of Wood."

(3) Floor Framing. (a) All floor framing shall satisfy the requirements of Table 51.03-A, whether floor system is considered part of a story or not, unless more restrictive requirements are noted under the occupancy chapters of this code.

(4) Exterior wall construction:

(a) All exterior walls which are in contact with the soil shall be of masonry or concrete except that all-weather wood foundations are permitted if constructed in accordance with the provisions outlined in section Ind 53.64.

(b) Exposed exterior walls between the first floor structural system and grade shall be of masonry or concrete except as follows:

1. Walls may be constructed of material other than masonry or concrete providing the following conditions are satisfied:

   a. The construction shall meet the requirements of table 51.03-A for specified class of construction.

   b. Any portion of exposed wall above grade and below the first floor structural system, when other than masonry or concrete, shall be counted as a story, and is also considered when determining height of wall.

Note: Buildings utilizing wood foundations in accordance with the provisions outlined in section Ind 53.64 will be limited to 2 levels (one-story and basement, one-story and ground floor, or 2-story with wood floor wall).

(5) Interior wall construction. (a) Openings in partitions and interior bearing walls shall be protected if such walls serve as required building division, fire division or fire separation walls.

1. Openings shall be protected by approved fire door or fire window assemblies as specified in section Ind 51.047 and 51.048, or fire damper or fire curtain door assemblies as specified in section Ind 64.42.

Note: Openings in walls other than those specified above need not be protected except to satisfy structural integrity end point for the time specified.

(6) Roof coverings, skylights and skydomes:

(a) There shall be no restriction in use of glass or other noncombustible material when satisfying minimum requirements for roof coverings.

(b) Where combustible plastic is used in roof openings it shall not exceed an area greater than 20% of the roof area except as permitted under occupancy sections.

*See Appendix A for further explanatory material.
1. No individual dome or group of domes or skylights shall exceed 100 square feet.

   a. Domes or groups of domes or skylights shall be separated from each other by at least 8 feet laterally and 10 feet along the slope of the roof.

(7) Building locations:

   (a) When the distance between buildings located on the same property is less than 10 feet, the following shall apply:

1. Where the combined gross area for these buildings is less than that allowable for one building the exterior wall shall satisfy minimum requirements listed for class of construction in table 51.03-A.

   a. Buildings classified as wood frame under sections Ind 51.03 (7) or (8) shall have exterior walls with a fire-resistive rating of not less than that required for these buildings when satisfying the 10 feet to 30 feet distance to property line shown in table 51.03-A.

2. Where the combined gross area for these buildings is greater than that allowable for one building, one of the opposing walls shall be not less than a 4-hour fire-resistive rated fire division wall or building division wall, whichever applies. Where buildings are of different classes of construction, the lesser allowable gross area shall apply.

(8) Interior balcony or mezzanine. Interior balconies or mezzanine floors shall have fire-resistive ratings as required for the story in which it is located.

(9) No pipes, wires, cables, ducts or other service equipment shall be imbedded lengthwise in the required fire-resistive protection of any structural member except as allowed in approved fire rated assemblies.

(10) Exposed exterior structural columns and framing. The required fire-resistive hourly rating may be omitted on noncombustible columns and framing when the building does not exceed 2 stories and the fire separation to the center of a street, or to the property line or buildings on the same property, is greater than 30 feet.

(11) Stairways, elevators and vertical shafts which serve 3 or more floor levels shall be enclosed with fire-resistive rated construction equal to or better than requirements specified in Table 51.03-A, except as exempted below:

   (a) In buildings with 3 floor levels, the stairways in the upper 2 levels may be left open provided all stairways leading to the lowest level are separated from the upper levels with fire-resistive rated construction as specified in Table 51.03-A or better.

   (b) Conditions specified in section Ind 55.09 (1) (a) and (b) as applied to a place of worship are acceptable.

   (c) A building having 3 or more floor levels may have an open interior stairway or floor opening connecting any 2 adjacent floors providing:

*See Appendix A for further explanatory material.
1. The floors above and below said openings serve to cut off the openings at these floor levels.

a. The fire-resistant ratings of floors shall satisfy those specified in Table 51.03-A, but in no case shall the rating be less than one-hour combustible or noncombustible, whichever applies.

2. The open stairway between 2 floors is in addition to the required stairways and exit passageways specified in the occupancy chapters of this code.

3. The openings are not prohibited by the occupancy chapters of this code.

(12) Parapet Walls. (a) Parapet walls shall be provided on exterior walls closer than 10 feet to a property line or to other buildings on the same property except as exempted under Ind 51.02 (12) (a) 4, Wis. Adm. Code. Parapet walls shall satisfy the following requirements:

1. Parapets shall not be less than 2 feet in height.

2. The minimum thickness of masonry parapets shall be 8 inches.

3. Parapets shall have fire-resistant ratings as specified for exterior walls in Table 51.03-A.

4. Parapets are not required on exterior walls which front streets and alleys or where exterior walls connect with roofs of noncombustible construction.

(b) All parapet walls shall be properly coped with noncombustible weatherproof material.

(13) Fire division walls. Fire division walls shall have not less than a 4-hour fire-resistant rating as specified in section Ind 51.04 and shall comply with one of the following conditions:

(a) The wall shall extend 3 feet above the roof.

(b) The wall shall connect and make tight contact with roof decks of at least 2-hour fire-resistant noncombustible construction on both sides of the wall.

(c) The wall shall connect and make tight contact with roofs of noncombustible construction on both sides of the walls, and the roofs shall be noncontinuous at the wall.

(14) Determination of number of stories.* For purposes of establishing the maximum allowable stories in the various classes of construction stated in section Ind 51.03, the number of stories shall be determined on the following basis:

(a) The first floor shall be determined first and this level shall satisfy the following conditions:

1. Is the lowest floor having one or more required exits for that floor and for any floor(s) above or below.

*See Appendix A for further explanatory material.
a. If condition stated in 1. is not satisfied, the highest floor level shall be considered the first floor.

2. The elevation of the first floor shall be at or not more than 6 feet above an exit discharge grade.

3. The door sill of all required exit discharges from the first floor shall be at or not more than 3 feet above exit discharge grade.

(b) An interior balcony or mezzanine floor which exceeds 25,000 square feet or one third \( \frac{1}{3} \), whichever is least, of the net area enclosed within exterior walls and/or fire division walls shall be counted as a story.

(c) Penthouse (a) with a total area that exceeds 50% of the total roof area shall be counted as a story (ies).

(d) Construction according to section Ind.51.02 (4) (b) 1. b. shall also be counted as a story (ies).

(e) Total number of stories shall include the first floor plus all stories above and those stories determined by sections Ind.51.02 (14) (b), (c) and (d).

1. Floor levels satisfying the definition of basement(s), ground floor(s), attic, interior balcony (ies) and/or mezzanine floor (s), unless otherwise stated, shall not be counted as a story (ies).

15. DECORATIVE COMBUSTIBLE MATERIALS. Decorative combustible materials may be applied to all required noncombustible exterior surfaces of "O" hourly rated construction or better, up to a limit of 10% of the surface area within any 100 lineal feet of the building.

(a) Exception. Fire-retardant treated wood may be applied to all required noncombustible exterior surfaces of "O" hourly rated construction without limit.

18. ACCESS TO ATTIC AND ROOF. (a) Attic. Every attic compartment shall be provided with access from the floor level immediately below it. The access opening shall be at least 20 by 30 inches and shall be located above the stair landing or in an accessible location.

Note: A single access point to the attic from the floor level immediately below will be acceptable if all the attic compartments are interconnected with access openings of at least 20 by 30 inches.

(b) Roof. All buildings more than 2 stories, or 25 feet in height, where the slope of the roof is less than 3 in 12, shall be provided with a means of access to the main roof from the floor level immediately below. The roof opening shall be at least 20 by 30 inches and shall be provided with a permanent ladder or stairway.

1. Exception. Roof access shall not be required in the sloped ceiling (cathedral ceiling) portions of buildings.

19. ATTIC COMPARTMENTALIZATION. Attics of combustible construction, other than those above suspended ceilings, shall be divided into areas not greater than 3,200 square feet by firestopping as specified in

*See Appendix A for further explanatory material.*
section Ind 53.63 (1) (c). Compartmentalization shall extend into the eave and soffit areas to provide a complete separation between compartments. Panels for access openings in compartment walls shall be equipped with self-closing devices and shall normally be kept closed.

(20) CLASS OF CONSTRUCTION SEPARATION. Portions of buildings of different classes of construction, as specified in section Ind 51.03, shall be separated by fire division walls as specified in section Ind 51.02 (13) or the building classification will be reduced to the lowest class of construction utilized.

History: Cr. Register, June, 1972, No. 198, eff. 1-1-73; r. (9) and (10), renum. (8) to be (4), (4), (5), (6), (7). (8) to be (6), (7), (8), (9), (10), am. (2) cr. Ind 51.03 Classes of construction standards. (1) FIRE RESISTIVE TYPE A (NO. 1): (a) A building is of fire-resistive construction if all the walls, partitions, piers, columns, floors, ceilings, roof and stairs are built of noncombustible material, with a fire-resistive rating as specified in table 51.03-A.

I. Concealed draft openings in columns, walls and partitions shall be firestopped with noncombustible material at each floor level.

(b) All buildings of this classification shall not be restricted in height.

(c) Stairs and stair platforms shall be constructed of noncombustible material.

(d) Doors and windows may be of wood except as otherwise specified in section Ind 51.02 (5), Table 51.03-B, sections Ind 51.17, 51.18, 51.19 and 51.20, or in the occupancy chapters of this code.

1. Doors leading into main public corridors other than rated exit corridors shall be noncombustible or 20-minute fire door assemblies, or equivalent, unless otherwise specified above.

Note: Public corridors are intended to include principal corridors serving a floor and leading directly to building exits, but do not include communicating passageways within a given use area.

(e) Bays, oriel, and similar exterior projections from the walls shall be constructed of material with fire-resistive ratings as required for exterior walls.

(f) Mansards shall be constructed of noncombustible material or fire retardant treated wood.

*See Appendix A for further explanatory material.

#### Key to Abbreviations:
- **NC** - Non-Combustible
- **NP** - Not Permitted
- **HT** - Heavy Timber
- **PL** - Property Line

#### See Examples of Reading Chart:
- **N.C.** found 5-hour rating
- **C.B.** or **C.N.B.** 1-hour rating
- **N.C.** found 2-hour rating

#### Notes:
- See occupancy definitions in the Code for other basic requirements and more restrictive limitations.
- Refer to Table 6 for allowable sizes for windows and other openings in exterior walls.
- Refer to Table 6 for allowable sizes for windows and other openings in interior walls.
- Exemptions refer to Note 5.
- Refer to Table 6 for allowable sizes for windows and other openings in exterior walls.
- See Section 5103 for definitions of noncombustible and combustible materials.
- For definitions, refer to Section 5103 and Interior Wall Construction.

#### Table Columns:
- **Number of Stories**
- **Fire Resistant Rating**
- **Metal Frame Protected**
- **Wood Frame Protected**
- **Wood Frame Unprotected**
- **Applicable Notes**

#### Notes on Specific Elements:
- **Interior Supports:** Columns, Piers, Framing Stubs, Joists, etc.
- **Roof Framing:** Beams, Trusses, Joists, etc.
- **Roof Coverings:** Built-ups, Tar & Gravel, etc.
- **Exterior Walls & Court Walls:** Less than 10 ft. bearing, Over 20 ft. bearing, etc.
- **Fire Enclosures:** Stairways, Elevators, Vertical Shafts, etc.
- **Penthouse Walls:** 2 stories or more, etc.

#### Additional Notes:
- See Section 5103 for definitions of noncombustible and combustible materials.
- For definitions, refer to Section 5103 and Interior Wall Construction.

</tbody>
</table>

1. Does not apply to property lines along streets.
2. Tabulated percentage of openings shall be applied to each 100 linear feet of wall. This tabulation will not allow wings or high parapets, etc. to be used to increase exposed wall areas and thereby increase allowable total area of openings. Where openings are permitted, such openings protected with approved automatic-closing, 3-hour fire door or shutter assemblies—No Limit.
3. Fire windows shall be as required for moderate fire exposure—see Ind 51.043.

**History:** Cr. Register, June, 1972, No. 133, eff. 1-1-73; am. table A. Register, September, 1973, No. 212, eff. 10-1-73; am. table E, Register, July, 1974, No. 223, eff. 3-1-74.

- See Appendix A for further explanatory material.
1. The wall construction behind mansard shall extend to underside of roof deck and shall have a fire-resistive rating of not less than that specified for exterior walls in table 51.03-A.

(g) Penthouses and other roof structures shall have enclosing walls of noncombustible construction and roof framing and coverings shall be equal to that specified in table 51.03-A. Wood cooling towers are permitted.

(h) Wood may be used for finished floors, trim and wall paneling if open spaces behind the material are completely firestopped with noncombustible material or fire-retardant treated wood, unless prohibited under the occupancy requirements of this code.

(i) Acoustical materials, other than plastics, may be used on ceilings and walls provided they have a flame spread rating or 25 or less and the open spaces between furring on walls are completely firestopped with noncombustible material or fire-retardant treated wood.

(j) In required fire-resistive floor and roof assemblies one electric outlet box, not exceeding 16 square inches in area, may be installed in such ceilings in each 90 square feet of ceiling area. Recessed electric fixtures shall have protection boxes built above the fixture, constructed of approved fire-resistant material of rating equal to that of the ceiling, to cover the opening in case fixture is displaced. Duct openings in ceilings shall be protected by fire dampers.

(2) Fire-Resistive Type B (No. 2). (a) A building is of fire-resistive construction if all the walls, partitions, piers, columns, floors, ceilings, roof and stairs are built of noncombustible material, with a fire-resistive rating as specified in table 51.03-A.

(b) All buildings of this classification shall not exceed a height of 85 feet, in which height there shall be not more than 8 stories.

(c) Roofs. Where roof framing is greater than 20 feet above the floor, or highest level of any balcony, roof decks may be:

1. Matched or splined wood roof decking of not less than 2 inches in nominal thickness; or

2. Solid lumber not less than 3 inches in nominal thickness, set on edge securely fastened together; or

3. Approved 1½ inch thick plywood with exterior glue, tongue and groove with all end joints staggered and butting on centers of beams spaced not over 4 feet apart; or

4. Other forms of roof decks, if of noncombustible material.

(d) Stairs and stair platforms shall be constructed of noncombustible material.

(e) Doors and windows may be of wood except as otherwise specified in section Ind 51.02 (5), Table 51.03-B, sections Ind 51.17, 51.18, 51.19 and 51.20, or in the occupancy chapters of this code.

*See Appendix A for further explanatory material.
1. Doors leading into main public corridors other than rated exit corridors shall be noncombustible or 20-minute fire door assemblies, or equivalent, unless otherwise specified above.

Note: Public corridors are intended to include principal corridors serving a floor and leading directly to building exits, but do not include communicating passageways within a given use area.

(f) Bays, oriels, and similar exterior projections from the walls shall be constructed of material with fire-resistive ratings as required for exterior walls.

(g) Mansards shall be constructed of noncombustible material or fire-retardant treated wood.

1. The wall construction behind mansard shall extend to underside of roof deck and shall have a fire-resistive rating of not less than that specified for exterior walls in table 51.03-A.

(h) Penthouses and other roof structures shall have enclosing walls of noncombustible construction and roof framing and coverings shall be equal to that specified in table 51.03-A. Wood cooling towers are permitted.

(i) Wood may be used for finished floors, trim and wall paneling if open spaces behind the material are completely firestopped with noncombustible materials or fire-retardant treated wood, unless prohibited under the occupancy requirements of this code.

(j) Acoustical materials, other than plastics, may be used on ceilings and walls provided they have a flame spread rate of 25 or less and the open spaces between furring on walls are completely firestopped with noncombustible material or fire-retardant treated wood.

(3) METAL FRAME—PROTECTED (NO. 3). (a) A building is of metal frame protected construction if the structural parts and enclosing walls are of metal, or metal in combination with other noncombustible materials, with time resistance ratings as set forth in table 51.03-A.

(b) All buildings of this classification shall not exceed a height of 75 feet, in which height there shall be not more than 4 stories.

(c) Stairs and stair platforms shall be constructed of noncombustible material.

(d) Bays, oriels and similar exterior projections from the walls shall be constructed of material with fire-resistive ratings not less than that specified for exterior walls in table 51.03-A.

(e) Mansards shall be constructed of noncombustible material or fire-retardant treated wood.

1. The wall construction behind mansard shall extend to underside of roof deck and shall have a fire-resistive rating of not less than that specified for exterior walls in table 51.03-A.

*See Appendix A for further explanatory material.
(4) **Heavy Timber (No. 4).** 

(a) A building is of heavy timber construction if the structural frame consists of heavy timber or heavy timber in combination with metal, reinforced concrete or masonry, and all building elements are as set forth in table 51.03-A unless otherwise exempted.

(b) All buildings of this classification shall not exceed a height of 75 feet, in which height there shall be not more than 4 stories.

(c) **Columns:**

1. Wood columns shall be not less than 8 inches, nominal, in any dimension when supporting floor loads and not less than 6 inches, nominal, in least dimension and not less than 8 inches, nominal, in other dimension when supporting roof loads only.

2. All wood columns in the structural frame shall be superimposed, end to end, one above the other, and joined by metal or wood connectors.

   Note: See structural chapter Ind 53 for design requirements.

(d) **Floor framing:**

1. Beams and girders of wood shall be not less than 6 inches, nominal, in any dimension and not less than 45 square inches in actual cross-sectional area.

2. Wood arches which support floor loads shall be not less than 8 inches, nominal, in any dimension.

3. Framed timber trusses supporting floor loads shall have members of not less than 8 inches, nominal, in any dimension.

4. Floor framing and structural framing of material other than wood shall have a fire-resistive protection of not less than one hour.

(e) **Roof framing:**

1. Beams and girders of wood shall be not less than 6 inches, nominal, in any dimension and not less than 45 square inches in actual cross-sectional area.

2. Wood arches, timber trusses, purlins and rafters for roof construction shall have members not less than 4 inches, nominal, in width and not less than 6 inches, nominal, in depth. Spaced members may be composed of 2 or more pieces not less than 3 inches, nominal, in thickness when blocked solidly throughout their intervening spaces or when such spaces are tightly closed by a continuous wood cover plate of not less than 2 inches, nominal, in thickness, secured to the underside of the members. Splice plates shall be not less than 3 inches, nominal, in thickness.

(f) **Floors:**

1. Wood floor construction shall be tongued and grooved, or splined lumber not less than 3 inches nominal thickness, or of solid lumber placed on edge and securely fastened together to make a floor not less than 4 inches, nominal, in thickness. A top layer of flooring of one inch nominal thickness shall be placed over all such floor construction.

---

*See Appendix A for further explanatory material.*

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Definitions and standards

(g) Stair construction may be of wood in buildings not exceeding 3 stories in height. In 4-story buildings, all stairs, platforms and stair construction shall be constructed of noncombustible material.

(h) Roofs. Roof decks shall be:

1. Matched or splined wood roof decking of not less than 2 inches in nominal thickness; or

2. Solid lumber not less than 3 inches in nominal thickness, set on edge securely fastened together; or

3. Approved 1½ inch thick plywood with exterior glue, tongue and groove with all end joints staggered and butting on centers of beams spaced not over 4 feet apart; or

4. Other forms of roof decks, if of noncombustible material.

(5) Exterior masonry (No. 5). (a) A building is of exterior masonry construction if all enclosing walls are constructed of masonry or reinforced concrete and all building elements are as set forth in table 51.03-A unless otherwise exempted.

1. Exterior masonry walls shall extend to the underside of projecting roof rafters or joists or bearing points of beams and trusses.

2. Spaces between projecting rafters, joists, beams or trusses shall be firestopped with nominal 2-inch wood blocking or rigid noncombustible material to the underside of the roof decking.

Note: This rule is not intended to prohibit openings necessary to provide attic/ceiling ventilation.

(b) All buildings of this classification shall not exceed a height of 50 feet, in which height there shall be not more than 4 stories.

(c) The interior structural framing shall be metal, reinforced concrete, masonry or wood. Fire protection of metal or wood structural members may be omitted except that all such members supporting load-bearing masonry in all parts of buildings of more than one story shall be of metal, reinforced concrete or masonry with not less than one-hour fire-resistive protection of supporting metal.

(d) In walls where fire protection is required, the bottom of lower flange of lintels supporting load-bearing masonry shall be protected for openings exceeding 12-foot spans.

(e) Floors, roofs, partitions and stairs may be of wood but no joist, rafter, stud or stringer shall be less than 2 inches in nominal thickness.

(f) Bays, oriel and similar exterior projections from the walls shall be constructed of material with fire-resistive ratings as required for exterior walls.

(g) A mansard shall be constructed entirely of noncombustible material or fire-retardant treated wood satisfying the definition of “noncombustible” if it is subject to one of the following conditions:

*See Appendix A for further explanatory material.
1. If the mansard is closer than 20 feet to the adjoining property line or other building(s) on the same property.

2. If the vertical projected area of the mansard exceeds 30% of the area of the wall surface to which it is attached.

(h) Penthouses and other roof structures shall have enclosing walls of noncombustible construction and roof framing and coverings shall be equal to that specified in table 51.03-A.

(6) Metal frame—unprotected (No. 6). (a) A building is of metal frame unprotected construction if the enclosing walls are of unprotected metal or unprotected metal in combination with other noncombustible materials and all building elements are as set forth in table 51.03-A unless otherwise exempted.

1. Heavy timber may be used for interior columns and floor framing.

2. Interior mezzanines and balconies within the first story may be constructed of one-hour fire-resistive construction.

3. Panels of combustible materials may be used in exterior walls requiring NC-O hour rating up to a limit of 10% of the surface area within any 100 linear feet of the building. The bottom of the panels shall be at least 12 feet above grade.

(b) A pole building is considered type No. 6, metal frame unprotected construction, provided the following conditions are satisfied:

1. The poles supporting the roof only shall be at least 6 inches by 8 inches nominal in dimension. Poles supporting floors shall be 8 inches by 8 inches nominal in dimension. Poles may be built up from individual 2-inch nominal lumber if the pieces are bolted or glued and nailed together.

2. The girts shall be of noncombustible, fire-retardant treated wood or heavy timber construction.

3. The enclosing wall skin shall be of noncombustible materials. A non-structural 2" x 6" nominal wood skirt is permitted if it is in contact with the ground or foundation.

4. The roof cover shall have a class B rating or better.

5. All other requirements of this section and table 51.03-A are satisfied.

(c) All buildings of this classification shall not exceed a height of 50 feet, in which height there shall be not more than 3 stories.

(d) Stairs and stair platforms may be of wood with stringers not less than 2 inches in nominal thickness.

(e) Bays, orielis and similar exterior projections from the walls shall be constructed of material with fire-resistive ratings not less than that specified for exterior walls in table 51.03-A.

*See Appendix A for further explanatory material.*

Register, December, 1978, No. 376
Building and heating, ventilating and air conditioning code
(7) **WOOD FRAME—PROTECTED (NO. 7).** (a) A building is of wood frame protected construction if the structural parts and enclosing walls are of protected wood, or protected wood in combination with other materials, with fire-resistive ratings as set forth in table 51.03-A. If such enclosing walls are veneered, excised or faced with stone, brick, tile, concrete, plaster or metal, the building is also termed a wood frame protected building.

(b) All buildings of this classification shall not exceed a height of 40 feet, in which height there shall be not more than 2 stories.

(c) Floors, roofs, partitions and stairs may be of wood but no joist, rafter, stud or stringer shall be less than 2 inches in nominal thickness.

(d) The structural members supporting the finished ceiling in the topmost story shall be protected on the underside by fire-resistive material acceptable in systems approved for one-hour fire-resistive ratings as covered in section Ind 51.04.

(e) Buildings of wood frame protected construction may be located less than 10 feet to a property line or other building providing any wall closer than 10 feet to its adjacent property line or building is a 4-hour fire division wall, without openings, as specified in section Ind 51.02 (13).

(8) **WOOD FRAME—UNPROTECTED (NO. 8).** (a) A building is of wood frame unprotected construction if the structural parts and enclosing walls are of unprotected wood, or unprotected wood in combination with other materials as set forth in table 51.03-A. If such enclosing walls are veneered, excised or faced with stone, brick, tile, concrete, plaster or metal, the building is also termed a wood frame unprotected building.

(b) All buildings of this classification shall not exceed a height of 35 feet, in which height there shall be not more than 2 stories.

(c) Floors, roofs, partitions and stairs may be of wood but no joist, rafter, stud or stringer shall be less than 2 inches in nominal thickness.

(d) Buildings of wood frame unprotected construction may be located less than 10 feet to a property line or other building providing any wall closer than 10 feet to its adjoining property line or building is a 4-hour fire division wall, without openings, as specified in section Ind 51.02 (13).

Ind 51.04 Scope. This section shall include standards applicable to various types of fire-resistant construction. Requirements established herein are considered minimum safety standards and will not necessarily result in the most advantageous insurance rates.

History: Cr. Register, February, 1971, No. 182, eff. 7-1-71; r. eff. 8-1-71 and recr. eff. 1-1-72, Register, July, 1971, No. 187.

Ind 51.042 General requirements. (1) Construction details and quality of material used for these systems must be those used by the testing laboratory for the test, and/or those dictated by good construction practice.

(2) Connection of structural members. (a) The minimum fire-resistant protection of a connection shall be equal to the maximum required for the members to which it is attached.

(3) For structural components with a fire-resistant rating obtained by test with restrained ends, the supporting structure shall be designed to provide for this restraint.

(4) ASTM standard methods of test. (a) All products manufactured and tested according to ASTM standard methods prior to effective dates of standards specified in "Fire-Resistive Standards for Materials of Construction" shall be accepted unless the ASTM standard method used in the test is judged to be inadequate in comparison with the currently adopted standard method.

(5)* The heat transmission requirements of ASTM E-119 (25b), with the exception of high hazard areas, penal and health care facilities and warehouses for combustible materials, may be reduced to one-half (½) of the hourly rating required by this code, but not less than one hour.

Note: For ASTM E-119 Standard adopted see Ind 51.26 (49).

(a) The fire-resistant rating for structural integrity required by this code shall be maintained where the heat transmission criteria has been reduced.

(6) The use of fire-resistant protection implies consent by owner to maintain material in a serviceable condition. Where this protection is concealed, provisions shall be made for periodic visual inspection of the structural insulating material at each story.

Note: Definition of owner see 101.01 (2) (i), Stats.

History: Cr. Register, February, 1971, No. 182, eff. 7-1-71; r. eff. 8-1-71, and recr. eff. 1-1-72, Register, July, 1971, No. 187.

Ind 51.043 Approved rating methods. (1) Ratings of fire-resistant assemblies shall be determined by one of the following methods:

(a) Test by approved testing laboratories (see Ind 51.044).

*See Appendix A for further explanatory material.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

(b) Typical examples as listed in this code in lieu of approved test (see Ind 51.045).

(c) Approved method of calculation in lieu of approved test (see Ind 51.046).

History: Cr. Register, February, 1971, No. 182, eff. 7-1-71; r. eff. 8-1-71, and recr. eff. 1-1-72, Register, July, 1971, No. 187.

Ind 51.044 Approved testing laboratories. (1) Fire rating tests conducted according to table 1 listed ASTM standards shall be acceptable if conducted by the recognized testing laboratory for referenced test.

Note: Other testing laboratories will be recognized as an approved agency if accepted in writing by the department.

Registered, December, 1976, No. 276
Building and Housing, Ventilating and Air Conditioning Code
3. Type III - lightweight aggregate with expanded slag, shale or clay aggregate. Includes sanded lightweight concretes not over 115 lbs. per cu. ft. oven-dried density.

(b) Cover on reinforcing steel is for sides and bottoms. Where tensile reinforcing elements have different cover, the tabulated cover is the average of the minimum values of the individual elements. The cover of an individual element shall not be less than ½ the tabulated value. Top cover to be a minimum of ¾ inch.

(c) For the heat transmission requirements of floor and roof construction, the thickness of the top slab may be reduced if noncombustible insulation is directly applied to either side of the slab and provided the U-factor is equalled or reduced.

(d) The thickness of top slab is in accordance with ASTM E-119 heat transmission requirements. For variations in thickness of top slab see section Ind 51.042 (5).

Note: For ASTM E-119 standard adopted see Ind 51.126 (49).

(e) Longitudinal joints between individual precast floor or roof units, or individual wall units shall be installed as tested or shall be grouted solid for the thickness required by the fire-resistive rating. Noncombustible insulation may be substituted for the grout if the U-factor is equalled or reduced providing the integrity of insulation remains as installed. The topping used in floor or roof units may be included.

(f) Type I Hollow Masonry is a masonry with calcareous or siliceous aggregate having an oven-dried density exceeding 115 pounds per cubic foot. Type II Hollow Masonry is a masonry with expanded slag, clay, shale or pumice aggregate having an oven-dried density of 115 pounds or less per cubic foot.

(g) Equivalent thickness = \( \frac{\text{Total volume minus volume of voids}}{\text{length times height}} \)

(h) \( t \)-equivalent thickness = \( \frac{\text{Total core area minus area of void}}{\text{width}} \)

(i) Clay, shale, concrete or sand lime—with less than 25% voids or with all spaces filled.

(j) ½ inch space between column and masonry unit—no fill required.

(k) For restrained conditions, thickness of fire protection may be reduced if substantiated by test data or calculation method.

(l) Elements with this minimum size are recognized for heavy timber construction, acceptable for certain buildings in lieu of one hour noncombustible construction.

(m) Where combustible members are framed into a wall, the wall shall be of such thickness or be so constructed that the fire barrier between the member and the opposite face of the wall, or between adjacent

*See Appendix A for further explanatory material.*
members set in from opposite sides will be 93% of the equivalent thickness shown in Table 2.

(n) Cover thickness on reinforcing steel as indicated is based on continuity of system. For simple span conditions increase cover thickness by 60%.

(p) Wire mesh reinforced and with a minimum area of 0.015 inches square per foot of length or equivalent.

History: Cr. Register, February, 1971, No. 182, eff. 7-1-71; c. eff. 8-1-71, and recr. eff. 1-1-72, Register, July, 1971, No. 187; am. (1) (f), Register, March, 1972, No. 195, eff. 4-1-72.

Ind 51.046 Calculation method. (1) The rational design of structural members for fire resistance shall be submitted to the department and shall be based on the type of span (simple or restrained), the magnitude of longitudinal restraint, accepted structural engineering principles and methods.

(a) Appropriate research data and design criteria to substantiate the method, interpreting between known information, shall accompany the above material and shall include:

2. The temperature—strength characteristics of the structural components.

3. The time—temperature characteristics of the insulating material, at temperature range designated by ASTM E-119.

4. The expansion characteristics of the materials comprising the member, at the temperature range designated by ASTM E-119.

Note: 1. For ASTM E-119 standard adopted see Ind 61.25 (52).

2. The department will accept published research data from Portland Cement Association, American Iron & Steel Institute, and American Institute of Steel Construction, Inc.

5. The safety factor of not less than 1.0 shall be maintained at the end of the time requirement for the full design live and dead load.

History: Cr. Register, February, 1971, No. 182, eff. 7-1-71; c. eff. 8-1-71, and recr. eff. 1-1-72, Register, July, 1971, No. 187.

Ind 51.047 Fire-rated door assemblies in fire-rated construction. (1) FIRE-RATED DOOR ASSEMBLIES. Door openings, where permitted in fire-rated walls, shall be protected with fire-rated door assemblies in accordance with the following table. Fire-rated door assemblies shall be tested in accordance with ASTM E-132 standard method (Ind 61.25 (52)).

See Appendix A for further explanatory material.

(a) Doors leading to fire escapes, except doors leading to Class A fire escapes in apartments and row houses, shall be at least ¾-hour fire-rated door assemblies.

(b) Where the occupancy chapters of this code permit, 20-minute fire-rated door assemblies, or equivalent, may be provided, without a closing device.

(2) LABELS. Fire-rated door assemblies shall be labeled with a permanent label, securely attached and located to permit visual inspection after installation. The label shall identify the time rating, testing laboratory, listing agency and manufacturer.

(3) INSTALLATION OF FIRE-RATED DOORS. The fire-rated door assemblies shall be installed with frame, hinges, latches, closing devices and counterweights in accordance with methods and standards approved by the department. Adequate clearance shall be maintained to permit free operation of fire-rated doors.

Note #1: The department will accept recommended practices for installation covered in “Standard for Fire Doors and Windows,” NFPA No. 80.

Note #2: See Section Ind 51.15 for exit door requirements.

(4) SECURING DOOR FRAMES. Methods of securing door frames to adjacent construction shall be illustrated on the plans submitted to the department for review.

(5) DOOR CLEARANCES. The maximum swinging-door clearances to frame shall be ⅛ inch on sides and top and ¾ inch at bottom between sill or floor.

(6) DOOR CLOSING DEVICES. All labeled fire-rated doors, where required, shall be equipped with an approved automatic or self-closing device as defined in section Ind 51.01 (17).

(a) All doors serving smokeproof towers and interior enclosed stairways shall be equipped with a self-closing device or an automatic closing device actuated by products of combustion or smoke density.

Note: The department will accept detectors installed in accordance with the Standard on Automatic Fire Detectors, NFPA No. 72 E (Ind 51.27 (7a)).

(b) The requirements of section Ind 51.047 (6) (a) shall also be retroactive to existing buildings.

*See Appendix A for further explanatory material.
(c) Doors provided with a self-closing device shall remain in a closed position.

Note: The intent of this rule is to accept normal usage of the door, but not permit doors with this closing device to be blocked open at any time.

(d) Where a pilot weight is used, it shall be suspended from a chain or wire cable, and shall be installed in a protective housing.

Note: For specific types of closing devices permitted, please refer to the sections dealing with classes of construction and/or the occupancy chapters.

Register, December, 1974, No. 228, eff. 1-1-76; r. and recr., Register, December, 1975, No. 240, eff. 1-1-76; r. and recr. (6), Register, December, 1976, No. 252, eff. 1-1-77.

Ind 51.048 Fire window and glass block assemblies in fire-rated construction. (1) Window openings. Window openings, where permitted in fire-rated walls, shall be protected with fire window or glass block assemblies rated as a 3/4-hour by an approved laboratory and tested in accordance with ASTM E-163 standard method [Ind 51.25 (53)].

(2) Size. (a) Fire window assemblies. The size of the wired glass and frame assembly shall not exceed the size tested. Windows combined in multiple assemblies shall be separated by approved nonhearing metal munitions.

Note: Fire windows have been classified for either moderate or light fire exposure. For moderate fire exposure, the individual glass size is limited to 720 square inches. (Size limitations either 48 inches maximum width or 54 inches maximum height.) For light fire exposure, the individual glass size is limited to 1,200 square inches. (Size limitations either 54 inches maximum width or 64 inches maximum height.) Please refer to sections for classes of construction and/or occupancy chapters for fire window classifications.

(b) Glass block assemblies. Openings for glass block assemblies shall not exceed 120 square feet in area. The width or height of the opening shall not exceed 12 feet.

Note: Openings for glass block assemblies are classified for light fire exposure.

(3) Materials and installation. (a) Frames. Approved metal frames shall be securely fastened to the construction and be capable of resisting all wind stresses and other stresses to which they are likely to be subjected.

(b) Wired glass. The wired glass shall be labeled wired glass, 3/4-inch thick, and shall be well bedded in approved glazing compound. All exposed joints between the metal shall be struck and pointed. The clearance between the edges of the glass and metal framing shall not exceed 3/8 inch.

(c) Glass block. Glass block assemblies shall be installed according to the details of the tested assembly.

Note: The department will accept recommended practices for installation covered in "Standard for Fire Doors and Windows," NFPA No. 80.

*See Appendix A for further explanatory material.

Register, December, 1978, No. 278
Finishing and heating, ventilating
and air conditioning code
(4) Labels. Fire window assemblies shall be labeled with a permanent label, securely attached and located to permit visual inspection after installation. The label shall identify the time rating, testing laboratory, listing agency and manufacturer. Glass block shall be listed by an approved laboratory.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76.

Ind 51.049 Miscellaneous openings in fire-rated construction.
(1) Service openings. Openings around ducts, pipes, conduit or other service installations penetrating required fire-resistant rated floor, wall and roof assemblies shall be filled solidly with material of fire-resistant rating equal to the required rating of assembly penetrated.

(2) Fire dampers. Duct openings in required fire-resistant rated floor and wall assemblies shall be protected as specified under section Ind 64.42.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 51.055 Roof coverings. (1) Roof coverings of class A, B, C or unclassified shall be provided as specified under "Classes of Construction" or under the specific occupancy requirements.

Note: Brick, concrete, tile, slate, fernaceous and cuprous metals and their alloys will be accepted as "Class A" roof coverings.

History: Cr. Register, February, 1971, No. 182, eff. 7-1-71; 2, eff. 6-1-71, and recr. eff. 1-1-72, Register, July, 1971, No. 187; remum. from Ind 51.049 to be 64.055, Register, December, 1975, No. 240, eff. 1-1-76.

Ind 51.06 Foam plastics. (1) Scope. The requirements of this section shall apply to the use of foam plastics in building construction.

(2) Definitions. (a) Approved diversified tests. Approved diversified tests mean fire tests which evaluate materials or construction assemblies representative of actual end use applications.

Note: Approved diversified tests may include, but are not limited to, ASTM E84 (tunnel test), ASTM E119 "fire test," full-scale corner test, enclosed room-corner test and ignition temperature tests.

(b) Foam plastic. For purposes of this code, foam plastic is a manufactured organic material used as a building construction element, decorative finish material, trim, insulation or sound-absorbing material.

(3) General. (a) All foam plastic, except as otherwise noted, shall have a flame spread rating of not more than 75 and a smoke developed rating of not more than 450 when tested in accordance with ASTM E84. Foam plastic tested at a thickness of 4 inches or more and meeting these requirements may be used in thicknesses up to 10 inches. Foam plastic tested at a thickness of less than 4 inches and meeting these requirements may be used in thicknesses up to 4 inches.

(b) Unless otherwise specifically approved in accordance with section Ind 51.06 (4), foam plastic shall be limited to the following applications:

*See Appendix A for further explanatory material.

Register, May, 1976, No. 281
Building and heating, ventilating
and air conditioning code
1. Within the cavity or core of a masonry or concrete wall or encased within a floor or roof deck system of concrete, regardless of the class of construction.

2. On the room side of walls, ceilings or roofs provided the foam plastic is fully protected from the interior of the building, including unoccupied spaces above suspended ceilings, by an approved thermal barrier having a minimum rating of 15 minutes. The thermal barrier shall be installed so that under the same fire-test conditions, it will remain in place for 15 minutes. Crawl space walls may be insulated with unprotected foam plastic provided the flooring consists of at least ¼-inch tongue and groove plywood sheathing, or equivalent, and the space is not used for air handling purposes.

   Note: The department will accept ½-inch fire-rated wallboard or other approved materials having 15-minute finish rating as determined by ASTM E119 "fire test."

3. Within the cavity, or as an element, of an NC-0 or 0-hourly rated system provided the thermal protection specified in 2. is applied.

4. Within the cavity, or as an element, of an hourly rated system provided such system or assembly meets the requirements of section Ind 51.04 for the time-rated construction.

5. As part of a class A, B or C roof covering satisfying the requirements of section Ind 51.05. The smoke-developed requirement is waived for roofing insulation applied to the exterior side of the roof deck.

6. Refrigerated facilities. Foam plastic insulation used as a building element for freezer buildings, cold storage facilities, refrigerated food-processing rooms and other similar unheated, low-population density uses, may be used without a thermal barrier provided the foam plastic is covered on both sides by not less than 0.032-inch aluminum, no. 26 gauge corrosion-resistant steel, or equivalent, and the building and foam plastic panel is protected by an approved automatic sprinkler system.

   a. Exception. The approved automatic sprinkler system may be omitted, except as otherwise required by other sections of this code, when thermosetting foam plastic having a flame-spread rating of 25 or less is used.

   b. Exception. Walls may be covered with 3/32-inch fiber reinforced plastic panels in wet food-processing areas provided the fiber reinforced plastic material has a flame spread of 175 or less.

   Note: Wet food-processing areas, as specified in this section, need not be provided with approved automatic sprinkler systems provided the foam plastic core material satisfies the requirements of section Ind 51.06 (3) (b) 5. a.

   c. Exception. The requirements of this section do not apply to free-standing cooler-freezer equipment not exceeding 5,000 square feet in floor area in one-story buildings.

   Note: Free-standing equipment may not rely on the enclosing building for lateral or vertical support except for the floor load.

7. Metal-clad sandwich panels consisting of a covering of 0.032-inch aluminum or no. 26 gauge corrosion-resistant steel on both sides, with a
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 54-1

foam plastic core not more than 4 inches in thickness with a flame spread of 25 or less, may be used where NC-0 hour rated construction is permitted. An approved thermal barrier is not required provided the building and the foam plastic panel is protected by an approved automatic sprinkler system.

8. Doors. Foam plastic may be used on interior and exterior doors provided the foam plastic is covered by not less than 0.032-inch aluminum or no. 26 gauge corrosion-resistant steel. Hourly rated doors shall meet the requirements of section Ind 51.047.

9. Trim and decorative finish materials. Foam plastic used for decorative finish material, trim or molding shall be limited to 10% of the surface area within any 100 linear feet of interior walls and ceilings.

10. Bulk vegetable storage. Buildings used exclusively for the bulk storage of vegetables shall have the foam plastic insulation protected on both sides with ¾-inch exterior grade plywood, or equivalent.

(4) SPECIFIC APPROVAL. Foam plastic not meeting the requirements of Ind 51.06 (3) may be approved by the department for specific application based on the submittal and written acceptance of data from approved diversified tests (see section Ind 50.19).

History: Cr. Register, May, 1979, No. 281, eff. 6-1-79.

Ind 51.08 Occupancy separations. (1) When a building is used for more than one occupancy purpose, each part of the building comprising a distinct occupancy division shall be separated from any other occupancy division as provided for under the occupancy requirements of this code.

(2) Occupancy separations shall be classed as “Absolute”, “Special” and “Ordinary” and shall apply to both horizontal and vertical separations.

(a) An absolute occupancy separation shall have no openings therein and shall have walls and floors of not less than 4-hour fire-resistive construction as specified in section Ind 51.04.

(b) A special occupancy separation shall have walls and floors of not less than 3-hour fire-resistive construction as specified in section Ind 51.04. All openings in walls forming such separation shall be protected on each side thereof by self-closing fire-resistive doors as specified in section Ind 51.047, and such doors shall be kept normally closed. The total width of all openings in any such separating wall in any one story shall not exceed 25% of the length of the wall in that story and no single opening shall have an area greater than 120 square feet.

1. All openings in floors forming this type of separation shall be protected by vertical enclosures extending above and below such openings. The walls of such vertical enclosures shall be of not less than 2-hour fire-resistive construction as specified in section Ind 51.04 and all openings therein shall be protected on one side thereof by self-closing 1½-hour fire-resistive doors as specified in section Ind 51.047 and such doors shall be kept normally closed.

*See Appendix A for further explanatory material.
(c) An ordinary occupancy separation shall have walls and floors of not less than 1-hour fire-resistive construction as specified in section Ind 51.04. All openings in such separations shall be protected by self-closing fire-resistive doors as specified in section Ind 51.047 and such doors shall be kept normally closed.

History: 1-2-58; r. and recr. (2) (c), Register, October, 1967, No. 142, eff. 11-1-67; am. (2) (a), (b) and (c), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (2) (a), (b) and (c) eff. 8-1-71 and expiring 1-1-72 and cr. (2) (a), (b) and (c) eff. 1-1-72. Register, July, 1974, No. 187; am. (2) (b) 1., Register, December, 1978, No. 278, eff. 1-1-79.

Ind 51.15 Standard exit. (1) Every door which serves as a required exit from a public passageway, stairway or building shall be a standard exit door unless exempted by the occupancy requirements of this code.

Note: For required exits see Wis. Adm. Code sections Ind 54.06, 55.10, 56.08 and 57.09.

(2) Every standard exit door shall swing outward or toward the natural means of egress. It shall be level with the floor, and shall be so hung that, when open, it will not block any part of the required width of any other doorway, passageway, stairway or fire escape. No revolving door, overhead door or sliding door shall be considered as a standard exit. Sliding doors serving as horizontal exits, in accordance with section Ind 51.19 (2) (a) 1., shall be considered standard exits.

(3) A standard exit door shall have such fastenings or hardware that it can be opened from the inside by pushing against a single bar or plate or turning a single knob or handle.

(a) The use of a key for opening door from the inside is prohibited.

1. Exception: Upon written request by the owner, key-locking, or securing, of exits may be approved in fire-resistive buildings, or parts of fire-resistive buildings, accommodating occupants who must be detained in order to protect the occupants or the public from physical harm.

Note #1: Section Ind 51.15 (3) (a) 1. is intended to apply only to jails, prisons, mental institutions, asylums, nursing homes with senile patients, and similar type occupancies.

Note #2: The owner’s request should include the following considerations: accessibility of keys to the fire department and staff personnel for the locked areas; electrical devices which release the locks; and 24-hour supervision of the locked areas by personnel who carry keys for the locked areas while on duty. Electrical devices which release the locks upon power failure or upon activation of the fire alarm or sprinkler system or the product of combustion detectors should be considered for securing of exits in nursing homes.

Note #3: Written approval to lock exits must also be obtained from the department of health and social services in accordance with the rules of that department.

(b) The door shall not be barred, bolted or chained at any time.

*See Appendix A for further explanatory material.

Register, May, 1979, No. 281
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 55

Definitions and standards

1. Exception. When authorized persons (employees, frequenters, patrons and other such occupants) are not present, the exit door may be secured by the use of a single bar or bolt. A sign or label shall be posted on the door near the single bar or bolt. The sign or label shall bear the following: "This bolt or bar shall be kept open during periods of occupancy."

Note: The intent of this rule is to prohibit padlocks or use of a key to open a door or lock at any time. The bar and bolt exception is to give added security against intruders from the outside while protecting persons in the building from being trapped.

(4) A standard exit doorway shall not be less than 6 feet 4 inches high by 3 feet 4 inches wide, except where especially provided under occupancy classifications and in Wis. Admin. Code section Ind 51.20. Where double doors are provided with or without mullions, the width of each single door may be reduced to 2 feet 6 inches, except double doors utilized to provide accessibility in accordance with section Ind 52.04 shall have the width of at least one single door increased to 2 feet 8 inches.

(5) All exit doors, unless otherwise exempted by the occupancy requirements of this code, shall be plainly marked by a red illuminated translucent exit sign bearing the word EXIT or OUT in plain letters not less than 6 inches in height and in such other places as may be necessary to direct the occupants to exit doorways.

(6) * REQUIRED AGGREGATE WIDTH. (a) The required aggregate width of exits from a level shall be determined by using the full occupant load of that level, plus the percentage effects of the occupant loads of adjacent levels (above and below) which exit through it as follows:

1. 50% of the occupant load of each first-adjacent level(s);
2. 25% of the occupant load of each second-adjacent level(s).

(b) The width shall be based upon the following ratios:

1. Types No. 1 through No. 4 construction unsprinklered, 40 inches per 100 persons;
2. Types No. 6 through No. 8 construction unsprinklered, 50 inches per 100 persons;
3. Types No. 1 through No. 4 construction sprinklered, 30 inches per 100 persons;
4. Types No. 5 through No. 8 construction sprinklered, 40 inches per 100 persons.

*See Appendix A for further explanatory material.
Ind 51.16 Stairways. (1) Definition. A stairway is one or more flights of steps, and the necessary platforms or landings connecting them, to form a continuous passage from one elevation to another, including exterior porches, platforms and steps providing means of ingress or egress.

(2) Required aggregate width. (a) The required aggregate width of stairway exits from any level shall be as determined in accordance with the requirements of Ind 51.16 (6).

(b) In no case shall the minimum width of an exit stair be less than that specified in Ind 51.16 (3).

(c) Under no circumstances shall stairways decrease in width in the line of travel toward the exit.

(3) Minimum width. (a) Every required exit stairway shall be not less than 3 feet 8 inches wide, except as provided in the occupancy chapters, of which not more than 4 inches on each side may be occupied by a handrail. The clear dimension between handrails, or stringers, shall not be less than 3 feet 0 inches.

(b) Nonrequired stairways need not conform to the width requirements of this code.

(4) Risers and treads. Risers and treads shall be designed and provided in accordance with the following:

(a) All stairways and steps shall have a rise of not more than 7¾ inches and a tread not less than 9½ inches, measured from tread to tread and from riser to riser. Treads and risers shall be uniform in any one flight. Winders shall not be used.

Note #1: The department recommends that steps be proportioned so the sum of 2 risers and a tread, exclusive of its nosing or projection, should be not less than 24 inches or more than 26 inches.

Note #2: The department may accept nonstandard exit stairways serving unoccupied areas, such as equipment mezzanines or platforms, and similar areas, if approved in writing.

Note #3: Round or smooth nosings are recommended as they are not difficult to negotiate for individuals with restrictions in the knee, ankle or hip, or with artificial legs or long leg braces.

(b) The edges of all treads and the edges of all stairway landings shall be finished with a nonslippery surface not less than 3 inches in width.

(c) Where an exit door leads to an outside platform or sidewalk, the level of the platform or sidewalk shall not be more than 7¾ inches below the doorsill.

(d) Every stairway flight shall have at least 3 risers (unless additional safety is provided which meets the approval of the department).

(e) There shall be no more than 22 risers in any one flight.

(5) Handrails. Handrails shall be designed and provided in accordance with the following:

*See Appendix A for further explanatory material.
(a) All stairways of more than 3 risers shall have one handrail on the left side as one mounts the stairs, and on the open side, if any. Stairways and steps 5 feet, or more, in width shall have a handrail on each side. One handrail shall extend at least 6 inches beyond the top and bottom riser.

Note: The handrail extension is intended for support prior to ascending or descending the stairs. The ends of the rails should not constitute a projecting hazard.

(b) Stairways which are more than 8 feet wide shall be divided by center handrails into widths of not more than 8 feet nor less than 3 feet 8 inches.

(c) Exterior stairways with more than 3 risers, and an integral part of the building, shall have a handrail on each side. Exterior stairways more than 50 feet wide shall be provided with one or more intermediate handrails.

(d) Handrails shall be not less than 2 feet 6 inches above the nose of the treads on stairways and 3 feet 6 inches above platforms, walks, balconies and mezzanines.

(e) All railings shall be designed to withstand a load of at least 200 pounds applied in any direction at any point.

(f) Railings guarding differences of elevation (i.e., open sides of stairways, elevated platforms, walks, balconies, mezzanines) shall be designed to prevent the passage of an object with a diameter larger than 9 inches.

(6) Toeboards. A toeboard shall be provided at exposed edges of all elevated platforms, walks, balconies, mezzanines, ramps and floor openings to prevent the fall of materials. The toeboard shall extend 4 inches above the finished floor. Where material is stockpiled to a height where the toeboard does not provide adequate protection, additional measures shall be taken to prevent the fall of materials.

(7) Headroom. Every stairway shall be provided with a headroom clearance of not less than 7 feet 6 inches. The clearance shall be established by measuring vertically from the edge of the tread nosing to the ceiling or soffit above the tread nosing.

(a) Exception. The headroom clearance for stairways in apartments, row houses and townhouses may be reduced to not less than 6 feet 8 inches.

(8) Stairway Landings and Platforms. (a) If a door is provided at the head and/or foot of a stairway, a landing or platform shall be placed between the door and the stairway regardless of the direction of swing of the door.

(b) Every landing or platform shall be at least as wide as the stairway, measured at right angles to the direction of travel. Every landing or platform must have a length of at least 3 feet, measured in the direction of travel.

*See Appendix A for further explanatory material.*
(9) **Curved Stairs.** Interior or exterior curved stairs used as required exits shall meet all the requirements for stairways. Curved stairs shall have a radius of at least 25 feet at the interior edge of the tread.

(10) **Spiral Stairs.** Spiral stairways may be permitted as specifically allowed by the occupancy chapters of this code. Such spiral stairs shall be at least 22 inches in width and shall have treads at least 7 inches in width at a point one foot from the narrow end of the tread, and a uniform riser height of not more than 8 inches.

*History:* 1-2-56; am. (2); (2) (a); (2) (b); Register, June, 1956, No. 6, eff. 7-1-56; r. and rec. Register, September, 1959, No. 48, eff. 10-1-59; r. (4) (b), renum. (c) to be (b), and cr. (5), Register, February, 1971, No. 182, eff. 3-1-71; am. (2) (a), Register, September, 1973, No. 313, eff. 10-1-73; r. and rec. Register, December, 1974, No. 228, eff. 1-1-75; am. (4) (a) and cr. (10), Register, December, 1977, No. 264, eff. 1-1-79; cr. (7) (a), Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 51.17 Smokeproof stair tower.** (1) A smokeproof stair tower shall be an enclosed stairway which is entirely cut off from the building and which is reached by means of open balconies or platforms. The stairways, landings, platforms and balconies shall be of noncombustible material throughout. The enclosing walls shall be of not less than 4-hour fire-resistive construction, and the floors and ceilings of not less than 2-hour fire-resistive construction as specified in section Ind 51.04.

(2) The doors leading from the buildings to the balconies and from the balconies to the stairways shall be fire-resistive doors, and all openings within 10 feet of any building shall be protected with fire-resistive windows for moderate fire exposure, or fire-resistive doors as specified in section Ind 51.047.

(3) Each balcony shall be open on at least one side, with a railing not less than 3'6" high on all open sides.

*History:* 1-2-56; am. Register, December, 1962, No. 84, eff. 1-1-63; am. (1) and (2), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (1) and (2), eff. 9-1-71 and exp. 1-1-72, and cr. (1) and (2), eff. 1-1-72, Register, July, 1971, No. 167; am. (2), Register, June, 1972, No. 198, eff. 7-1-72.

**Ind 51.18 Interior enclosed stairway.** (1) An interior enclosed stairway shall be completely enclosed as specified in table 51.03-A, and all doors opening into such enclosure shall be as specified in section Ind 51.047.

(2) The enclosure shall include at each floor level a portion of such floor which will be at least as wide as the stairway; and such enclosure shall also include the passageway of the first floor level (if any) leading from the stairway to an outside door, so as to afford uninterrupted passage from the uppermost floor to such outside door without leaving the enclosure.

(3) If windows are placed in any such enclosure they shall be fixed fire-resistant windows as specified in section Ind 51.048 except in outside walls.

*History:* 1-2-56; am. (1) and (3), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (1) and (3), eff. 8-1-71 and exp. 1-1-72, and cr. (1) and (3), eff. 1-1-72, Register, July, 1971, No. 187; r. and rec. (1), Register, June, 1972, No. 199, eff. 1-1-73; am. (3), Register, December, 1976, No. 240, eff. 1-1-76.

*See Appendix A for further explanatory material.*
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 59
Definitions and standards

Ind 51.19 Horizontal exit. (1) General. A horizontal exit shall consist of one or more openings through an occupancy separation; 2-hour fire-rated separation wall extending from the basement or lowest floor to the underside of the roof deck rated in accordance with line 20 of table 51.03-A; or of one or more bridges or balconies connecting 2 buildings or parts of buildings entirely separated by occupancy separations as described in section Ind 51.08.

(2) Protection of openings. Openings used in connection with horizontal exits shall be protected by fire-resistive doors as specified in section Ind 51.047.

(a) Doors serving as required exits shall be standard exit doors and shall swing in the direction of exit travel. Where a horizontal exit serves spaces on both sides of the wall, there shall be adjacent doorways equipped with doors which swing in opposite directions.

1. Exceptions. a. Sliding doors may serve as standard exit doors in factories, warehouses and similar occupancies.

b. The swing of the exit door(s) may comply with the exceptions permitted in the occupancy chapters of this code.

(b) Approved illuminated exit signs shall be provided to indicate the horizontal exit.

(c) Such doors shall be kept unlocked, unobstructed, provided with a self-closing device and normally be kept closed.

1. Exception. Doors protecting openings used in connection with horizontal exits may be left opened if equipped with an automatic closing device actuated by smoke density or products of combustion other than heat.

Note: The department will accept detectors installed in accordance with the Standard on Automatic Fire Detectors, NFPA No. 72-R [Ind 51.27 (7a)].

(3) Ramp slope. Where there is a difference of elevation between connected areas, the difference shall be overcome by a ramp with a slope of not more than one foot in 6.

(4) Projection of adjacent openings. All doors and windows within 10 feet of any balcony or bridge shall be fire-resistive doors or fire-resistive windows as specified in sections Ind 51.047 and 51.048.

History: 1-2-56; am. (2) and (4), Register, February, 1971, No. 182, eff. 7-1-71; r. and restr. (2) and (4) eff. 6-1-71 and exp. 7-1-72, and cr. (2) and (4) eff. 1-1-72, Register, July, 1971, No. 187; am. (4) Register, June, 1978, No. 198, eff. 7-1-72; am. (4), Register, December, 1975, No. 243, eff. 1-1-76, r. and restr. Register, December, 1978, No. 278, eff. 1-1-79.

Ind 51.20 Fire escapes. (1) Location. Every fire escape shall be so located as to lead directly to a street, alley, or open court connected with a street.

(a) Every fire escape shall be placed against a blank wall if possible. If such a location is not possible then every wall opening which is less than 6 feet distant horizontally from any tread or platform of the fire escape...
shall be protected by a fire-resistant window for moderate fire exposure
or by a fire-resistant door as specified in sections Ind 51.047 and 51.048.

(2) EXITS TO FIRE ESCAPES. Every fire escape shall be accessible from a
public passageway or shall be directly accessible from each occupied
room. Exits to fire escapes shall be standard exit doors as specified in
section Ind 51.15, except that doors to "A" fire escapes may be not less
than 2 feet 6 inches wide.

(3) DESIGN AND FABRICATION. Each part of every fire escape (except
counterweights for balanced stairways) shall be designed and con­
structed to carry a live load of 100 pounds per square foot of horizontal
area over the entire fire escape. Each part of every fire escape shall be
designed and constructed in accordance with the requirements of sec­
tion Ind 53.50, except that the unit stresses therein specified shall be
reduced by one-fourth. The minimum sections and sizes specified below
shall be increased whenever necessary so that under full load the allow­
able unit stresses will not be exceeded.

(a) No other material than wrought iron, soft steel or medium steel
shall be used for any part of a fire escape, except for weights, separators
and ornaments. No bar material less than ¼ inch thick shall be used in
the construction of any fire escape, except for separators, ornaments,
structural shapes over 3 inches and rigidly built up treads and platforms
of approved design. In the fabrication of a fire escape, all connections
or joints shall be made by riveting, bolting or welding in an approved
manner. All bolts or rivets, except for ornamental work, shall be not less than
¾ inch in diameter.

(4) PLATFORMS. Each platform on an "A" fire escape shall be at least
28 inches wide; each platform on a "B" fire escape shall be at least 3 feet
4 inches wide. Such widths shall be the clear distance between stringers,
measuring at the narrowest point. Each platform shall extend at least 4
inches beyond the jambs of exit opening. The above minimum widths
and lengths shall be increased, wherever necessary, so that no exit door
or window will, when open, block any part of the required width of the
fire escape. Every platform shall consist of either,

(a) Flat bars on edge, not less than 1 x ¼ inch, but not less than 1¾ x ¼
inch where bolts and separators are used except that platforms and
treads constructed of flat bars on edge may be made of material 3/16
inch in thickness provided the material is galvanized after fabrica­tion.
Bars shall not be spaced more than 1¼ inches, center to center.

(b) ½ inch or ¾ inch square bars with sharp edge up, not more than
1½ inches, center to center.

(c) ¾ inch round bars, not more than 1½ inches, center to center.

(d) Platform and treads may be solid if covered by a roof.

(e) The platform frame shall consist of not less than 2 x ½ inch flat
bars on edge or equivalent, provided the brackets are not more than 4
feet apart. If brackets are more than 4 feet apart, the frame shall be
correspondingly stronger and stiffer. Every platform wider than 30

*See Appendix A for further explanatory material.

Register, December, 1978, No. 270
Building and heating, ventilating
and air conditioning code
inches, if made of square or round bars, shall have a third frame bar through the center; if made of flat bars, the platform shall have separators and bolts through the center. Frame bars shall not project more than ¼ inch above platform bars, except around the outside of platform.

(f) There shall be a platform at each story above the first, and intermediate platforms if floors are more than 18 feet apart vertically.

(g) Platforms shall not be more than 8 inches below the door sill.

(5) BRACKETS. Brackets for a 28 inch or 30 inch platform, when spaced not more than 4 feet apart, shall be made of not less than ¾ inch square bars or 1½ x 1½ x ¾ inch angles; such bars or angles shall be larger if the platform is wider or if the brackets are farther apart. Each bracket shall be fastened at the top to the wall by a through bolt (at least ⅜ inch diameter), nut, and washer (at least 4 inch diameter). The slope of the lower bracket bar shall be not less than 30 degrees with the horizontal. The lower bar shall have a washer or shoulder to give sufficient bearing against the wall.

(a) The strength of the wall to which brackets are to be attached shall be carefully considered in determining the spacing, shape and inside connection of brackets, so that under full load the wall will not be unduly strained. Where it is necessary to install brackets adjacent to wall openings they shall be located at a suitable distance therefrom, or the wall shall be properly reinforced.

(6) STAIRWAYS. (a) Each stairway of an "A" fire escape shall be at least 24 inches wide between stringers; such stairway shall have a uniform rise of not more than 8 inches and a uniform run of not less than 8 inches.

(b) Each stairway of a "B" fire escape shall be at least 3 feet 4 inches wide between stringers; such stairway shall have a uniform rise of not more than 8 inches, and a uniform run of not less than 9 inches.

1. The rise is the vertical distance from the extreme edge of any step to the corresponding extreme edge of the next step. The run is the horizontal distance between the same points.

(c) Stairway stringers shall consist of either:

1. A 5 inch channel or larger.
2. Two angles 2 x 2 x ¼ inch or larger.
3. Two flat bars 2 x ¼ inch or larger.
4. One flat bar 6 x ½ inch or larger.

5. If 2 angles or 2 flat bars are used, they shall be properly tied together by lattice bars, vertical as well as horizontal. If flat bars are used, every stairway of more than 10 risers shall have lateral bracing. The connection of stringers to platform, at top and bottom, shall be at least equal in strength to the stringers and shall safely carry the full live and

*See Appendix A for further explanatory material.*
dead loads. If stringers are carried by intermediate brackets, the stringers shall have a horizontal bearing on the brackets and shall be properly and securely connected thereto.

6. Treads shall consist of either flat or square bars, (not round), of the size and spacing specified for platforms. An “A” tread shall consist of at least 6 square bars, or 7 flat bars. A “B” tread shall consist of at least 7 square bars, or 8 flat bars. A “B” tread made of flat bars shall have separators and bolt through the center. A “B” tread made of square bars shall be brazed.

7. Treads and platforms may be solid if covered by a roof.

(7) BALANCED STAIRWAY. All “B” fire escapes, and all fire escapes on schools, theaters, assembly halls, hospitals, nursing homes, residential care institutions, group foster homes, and homes for the elderly shall reach to the ground or shall have a balanced stairway reaching to the ground. “A” fire escapes which are not on schools, theaters, assembly halls, hospitals, nursing homes, residential care institutions, group foster homes and homes for the elderly may terminate in a platform at least 3 feet long, located not more than 10 feet above the ground and does not serve more than 8 persons.

(8) RAILINGS. A railing at least 42 inches in height and having 2 intermediate rails, uniformly spaced, measuring vertically from the floor of the platform, shall be provided on all open sides of platforms. Railings at least 36 inches in height, measuring vertically from the nose of the treads, shall be provided on the open sides of all stairways and on both sides of balanced stairways. Either a railing or a handrail fastened to the wall shall be provided on each side of all “B” fire escape stairways.

(a) Every railing shall have posts, not more than 5 feet apart made of not less than 1 1/2 x 1 1/2 x 1/4 inch angles or less, or 1 1/4 inch pipe; top rail not less than 1 1/4 x 1/4 x 1/4 inch angle or equivalent; center rail not less than 1 1/4 x 5/16 flat bar or equivalent. All connections shall be such as to make the railing stiff; 2 bolts (1/4 inch or larger) shall be used at the foot of each post wherever possible, or at least one 5/8 inch bolt shall be used. Railing shall be continuous. No projections on the inside of the railing shall be permitted. Where a railing returns to the wall, it shall be fastened thereto with a through bolt (at least 3/8 inch diameter), nut, and washer; or (in reinforced concrete) with an approved insert; or the railing shall be made equally secure with a diagonal brace extending at least 3 feet horizontally and 3 feet vertically.

(b) All outside railings which are more than 60 feet above grade shall be at least 6 feet high, measuring vertically from floor of platform or from nose of step. Such railings shall be of special design approved by the department of industry, labor and human relations, having not less than 4 longitudinal rails, and vertical lattice bars not more than 8 inches apart, and proper stiffening braces or brackets.

(9) LADDER TO ROOF. Every fire escape which extends higher than the second floor shall be provided with a ladder leading from the upper platform to the roof, unless the fire escape stairway leads to the roof. The ladder shall have stringers not less than 1 1/4 inch pipe, or not less than 2 x
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Definitions and standards

3/8 inch flat bars, at least 17 inches apart in the clear. The rungs shall be not less than 3/8 inch square or 3/8 inch round bars, 14 inches center to center. The stringers shall be securely tied together at intervals no greater than every fifth rung. The stringers of each ladder shall extend not less than 4 feet above the roof coping and return to within 2 feet of the roof, with the top rung of the ladder level with the coping.

(10) OTHER TYPES OF FIRE ESCAPES. Sliding or chute fire escapes may be used, upon the approval of the department of industry, labor and human relations, in place of "A" or "B" fire escapes. Every sliding fire escape shall be provided with a ladder constructed as in subsection Ind 51.20 (9), extending from 5 feet above grade, to 4 feet above the roof coping.

History: 1-2-66; am. Register, December, 1969, No. 84, eff. 1-1-69; am. (1) (a), Register, February, 1971, No. 182, eff. 7-1-71; am. (1) (a), Register, June, 1972, No. 198, eff. 7-1-72; am. (3) (Instr. par.), Register, December, 1974, No. 928, eff. 1-1-75; am. (1) (a), Register, December, 1976, No. 246, eff. 1-1-76.

Ind 51.21 Standpipe and hose systems. (1) GENERAL REQUIREMENTS. All required standpipe and hose systems shall meet the requirements of this section.

Note: The department will accept installations conforming to the latest edition of NFPA No. 14 Standard for Installation of Standpipes and Hose Systems.

(2) CLASSES OF SERVICE. (a) Class I - Fire department standpipes. For use by fire departments and those trained in handling heavy fire streams from a 21/2-inch hose.

(b) Class II - First-aid standpipes. For use primarily by occupants of a building until the arrival of the fire department (11/2-inch hose).

(c) Class III - Combination fire department and first-aid standpipes. For use by either fire departments and those trained in handling heavy hose streams or by the building occupants.

(3) Class I - Fire department standpipes. (a) Where required. Fire department standpipes shall be provided for all buildings exceeding 60 feet in height.

1. Required standpipes shall be installed as construction progresses, to make them available for fire department use in the topmost floor constructed. Temporary standpipes may be provided in place of permanent standpipes during the period of construction when approved by the local fire department.

(b) Number of standpipes. Standpipes shall be sufficient in number so that any part of every floor area can be reached within 30 feet by a nozzle attached to 100 feet of hose connected to the standpipe in an unsprinklered building and 150 feet of hose in a sprinklered building.

(c) Cross connections. When 2 or more standpipes are required, they shall be cross connected and equipped with individual control valves. All control valves shall be of an approved indicating type valve. The valves shall be located so that the water supply to any standpipe riser can be

*See Appendix A for further explanatory material.

Register, December, 1978, No. 270
Building and heating, ventilating
and air conditioning code
shut off without interrupting the water supply to the remaining standpipes and be readily accessible to the fire department.

(d) Location of outlets. Hose outlets shall be located in stairway enclosures. Where stairways are not enclosed, outlets shall be at the inside of outside walls, within one foot of a smokeproof tower, interior stairway or fire escape. In buildings containing large interior areas, standpipes may be located at accessible interior locations.

(e) Protection of standpipes. Standpipes shall be protected against mechanical and fire damage. Dry standpipes shall be visible for inspection and not concealed.

Note: It is not the intent of this section to require standpipes to be protected with an hourly rated fire protection.

(f) Size. No required standpipe shall be less than 4 inches in diameter, and not less than 6 inches in diameter for standpipes in excess of 100 feet in height unless the building is completely sprinklered and the standpipe system is hydraulically designed in accordance with the requirements of subsection Ind 51.21 (g).

(g) Hose valves and connections. An approved 2½-inch hose-connection valve shall be located at each story, not less than 3 feet nor more than 6 feet above the floor level. Hose-connection valves shall be equipped with a tight-fitting cap on a chain and having lugs for a spanner wrench. When the building is completely sprinklered, and class II service is omitted, each standpipe outlet location shall be equipped with a 2½-inch hose valve, a 2½-inch by 1½-inch reducer, and a cap with an attached chain.

(h) Hose threads. All threads on hose connections shall be of national standard dimensions.

Note: Section 21.3.15, Wis. Stats., requires that all hose connections be fitted with the national standard hose threads adopted by the National Fire Protection Association.

(i) Fire department connection. An approved fire department siamese connection shall be installed on a 4-inch or larger pipe connection with each standpipe system. The connection shall be marked "To Standpipe". The elevation of the connection shall be not less than 18 inches nor more than 5 feet above the sidewalk or ground. In buildings with several standpipes, more than a single fire department siamese connection may be required by the local fire department.

Note: The department recommends that the fire department connection be located as close as possible to and within 150 feet of the fire department hydrant.

(j) Automatic water supply. An automatic water supply for a wet standpipe system shall be designed to provide not less than the following capacity from top outlets at not less than 65 psi flowing pressure for a period of 30 minutes: 500 gpm for a single standpipe; 750 gpm for 2 interconnected standpipes; 1,000 gpm for larger systems. Any of the following supplies will be acceptable:

1. Public waterworks system where pressure and discharge capacity are adequate.

*See Appendix A for further explanatory material.
2. Approved automatic fire pump (or pumps).

3. Pressure tank.

5. Approved manually controlled fire pump operated by remote control devices at each hose outlet.

6. Reservoirs.

(k) *Dry standpipes.* If only one standpipe is required, a dry standpipe may be used. A dry standpipe shall be limited to a single riser and shall not exceed 150 feet in height.

(4) **CLASS II - FIRST-AID STANDPIPES.** (a) *Where required.* First-aid standpipes shall be provided as required by the occupancy chapters of this code.

*Note:* See sections 64.13, 66.28, 66.29 and 57.21.

(b) *Number and location.* Standpipes shall be sufficient in number so that any part of every floor area, including basements, can be reached within 30 feet by a nozzle attached to not more than 100 feet of hose connected to a standpipe.

1. Hose outlets shall be located in occupied areas and preferably in corridors or at interior columns.

(c) *Size.* No required standpipe shall be less than 2 inches in diameter for buildings 4 or less stories or 50 feet in height, and not less than 2½ inches in diameter for buildings exceeding 4 stories or 50 feet in height.

(d) *Hose valves and connections.* An approved 1½-inch hose valve shall be located not more than 5 feet above the floor level. Where the static pressure at any standpipe hose outlet exceeds 100 psi, an approved device shall be installed at the outlet to reduce the pressure with the required flow at the outlet to not more than 100 psi.

(e) *Hoses.* Not more than 100 feet of hose shall be attached to each outlet. Hoses shall be of an approved type, 1½-inches in diameter, with ½-inch solid stream or combination nozzle attached, and shall be located in approved cabinets, racks or reels. In locations where the use of a solid stream may contribute to the spread of fire by scattering the burning material or where the existence of flammable liquids make the use of spray stream desirable, combination nozzles which give a spray or a solid stream shall be provided instead of ½-inch nozzles.

(f) *Water supply.* An automatic water supply shall be provided. The water supply shall be designed for 100 gpm for 30 minutes with 65 psi flowing pressure at the top outlet. The water supply may be from a city connection, gravity tank, pressure tank or pump.

*Note #1:* The department will permit the domestic water supply to serve class II standpipes provided no intervening control valves are installed to interrupt the service of the standpipe and a check valve is installed to prevent contamination of the domestic water supply.

*See Appendix A for further explanatory material.*
Note #2: The department will permit pumps, other than fire pumps, provided the water supply meets the requirements of section Ind 51.21 (4) (f).

Note #3: See Plumbing Code, chapter 1762, rules of the department of health and social services, for requirements pertaining to cross connections.

(5) CLASS III - COMBINED FIRE DEPARTMENT AND FIRST-AID STANDPIPES.  
(a) Where permitted. The features of class I and II service may be combined in a single system if served by an acceptable automatic water supply conforming to the requirements of section Ind 51.21 (3) (j).

(b) Requirements. Class III standpipes shall conform to the requirements of class I service except that 1½-inch outlets with a hose and 2½-inch outlets shall be provided on each floor and shall be installed to the requirements of the respective classes of service.

(6) COMBINED AUTOMATIC SPRINKLER AND STANDPIPE SYSTEM.  
(a) Definition. A combined system is a system where the vertical water piping serves both the automatic sprinkler system and the 2½-inch hose outlets of the standpipes used by the fire department. The combined system shall comply with the automatic sprinkler requirements of section Ind 51.23 and the standpipe and hose requirements of section Ind 51.21.

(b) Water supply and riser size. The minimum water supply and riser size for a combined system shall comply with the requirements of sections Ind 51.21 (3) (f) and (j), except the minimum water supply for a combined system for a completely sprinklered, light hazard occupancy building shall be 600 gallons per minute. When the building is completely sprinklered, the risers may be sized by hydraulic calculations.

Note: NFPA No. 13 - Standard for Installation of Sprinkler Systems, defines light hazard occupancy as occupancies where the quantity and/or combustibility is low and fires with relatively low rates of heat release are expected, such as: churches; clubs; educational; hospitals; institutions; libraries, except large stack rooms; museums; nursing or convalescent homes; offices, including data processing; residential; recreation seating areas; theaters and auditoriums, excluding stages and prosceniums.

(c) Connections. Each connection from a vertical riser of a combined system shall be provided with an individual control valve of the same size as the outlet.

(7) MAINTENANCE. Standpipe systems and equipment, whether required by this code or not, shall be maintained in an operable condition.

History: 1-2-56; r. and res. Register, December, 1976, No. 252, eff. 1-1-77; am. (7), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 51.22 Fire extinguishers.  
(1) Where fire extinguishers are required, they shall be of a type approved by the department of industry, labor and human relations. All fire extinguishers shall be charged in accordance with the instructions of the manufacturer.

(2) Extinguishers shall be conspicuously located where they will always be readily accessible and so distributed as to be immediately available in event of fire. They shall be hung on hangers or set on brackets or shelves so that the top of the extinguisher is not more than 5 feet above the floor.

*See Appendix A for further explanatory material.
DEFN. OF INDUSTRY, LABOR & HUMAN RELATIONS 67

Definitions and standards

Note: The department of industry, labor and human relations will ordinarily approve any extinguisher which bears the Underwriters' label and which is of the size, and suitable, for the hazard for which it is intended. Consult the department of industry, labor and human relations for list of approved extinguishers.

Ind 51.23 Automatic sprinklers. (1) General Requirements. All required automatic sprinkler systems shall be designed and constructed in accordance with NFPA No. 13, Standard for the Installation of Sprinkler Systems [Ind 51.27 (7a)]. Reinstallation of used sprinkler heads is prohibited. Approved secondhand devices may be installed by special permission of the department.

Note: The department will accept equipment, materials and devices listed or labeled by Underwriters' Laboratories or Factory Mutual. Other testing laboratories or inspection agencies will be recognized as an approved agency if accepted in writing by the department.

(2) Water Supply. (a) Approved automatic water supplies for the sprinkler system recognized by the department are listed below:

1. City water main;
2. Gravity or pressure tank;
3. Ground storage reservoir;
4. Natural bodies of water approved by the department (lakes, rivers, streams, etc.).

(b) If the water supply has inadequate pressure, an approved fire pump or tank shall be provided. The design and installation of water supply facilities for gravity tanks, fire pumps, reservoirs or pressure tanks, and underground piping shall conform to NFPA No. 22, Standard for Water Tanks for Private Fire Protection; NFPA No. 20, Installation of Centrifugal Fire Pumps; and NFPA No. 24, Outside Protection [Ind 51.27 (7a)].

(3) Basement Sprinklers. Every basement sprinkler system shall also include sprinklers in all shafts (except elevator shafts) leading to the story above.

(4) Fire Department Connection. Every sprinkler system shall have an approved siamese connection. The siamese connection shall be marked and readily accessible to the fire department and shall conform to the requirements of section Ind 51.21 (3) (i).

(5) Sprinkler Alarms. Every sprinkler system shall be provided with a suitable audible alarm. In all buildings over 60 feet in height, each sprinkler system on each floor shall be equipped with a separate water flow device connected to an alarm system.

(6) Maintenance. All installed automatic sprinkler systems shall be properly maintained for efficient service. The employer or owner shall be responsible for the condition of his sprinkler system and shall use due diligence in keeping the system in good operating condition.

(7) Partial Automatic Sprinkler Systems. The sprinkler system shall be so installed and maintained as to provide complete coverage for

*See Appendix A for further explanatory material.
all portions of the building except where partial protection is specified by this code.

(a) Exception. The department will permit any partial sprinkler system containing 15 or less sprinkler heads to be connected to the domestic water supply service or a first-aid standpipe, provided the connection is equipped with an approved indicating valve and a check valve. The water pressure and volume shall be adequate to supply the required flow and the system shall be hydraulically calculated. An audible alarm is recommended. A fire department connection is not required.

Note: See Plumbing Code, chapter H 62, rules of the department of health and social services, for requirements pertaining to cross connections.

History: 1-2-50; r. and rev. Register, December, 1976, No. 239, eff. 1-1-57; cr. (1), Register, December, 1976, No. 239, eff. 1-1-77.

Ind 51.24 Fire alarm systems. Interior fire alarm systems required under Wis. Adm. Code sections Ind 54.19, 56.19 and 57.22 shall be designed and constructed in conformity with the following requirements:

(1) All such alarm systems shall consist of operating stations on each floor of the building, including the basement, with bells, horns, or other approved sounding devices which are effective throughout the building. The system shall be so arranged that the operation of any one station will actuate all alarm devices connected to the system except in the case of a presignal system. Fire alarms shall be readily distinguishable from any other signalling devices used in the building. A system designed for fire alarm and paging service may be used if the design is such that fire alarm signals will have precedence over all others.

(a) In all buildings where a fire alarm system and a complete automatic sprinkler system are required, a water flow detecting device shall be provided to actuate the fire alarm system.

(2) Every fire alarm system shall be electrically operated or activated by non-combustible, non-toxic gas. Electrically operated systems shall be operated on closed circuit current under constant electrical supervision, so arranged that upon a circuit opening and remaining open or in case of a ground or short circuit in the underground conductor, audible trouble signals will be given instantly. Gas-activated systems shall be mechanically supervised and under constant gas pressure, so arranged that in case of a pressure drop an audible trouble signal will be given instantly. Means shall be provided for testing purposes.

(3) In buildings more than 3 stories in height, coded fire alarm systems shall be provided, and the systems shall be so arranged that the code transmitted shall indicate the location and the story of the structure in which the signal originated.

Exception: (a) In apartment buildings, non-coded continuous sounding fire alarm systems under constant electrical or gas activated supervision will be approved.

(4) Operating stations shall be prominently located in an accessible position at all required exit doors and required exit stairways. Operating
stations shall be of an approved type and shall be conspicuously identified. All such operating stations shall be of a type, which after being operated, will indicate that an alarm has been sent thereto until reset by an authorized means. (Operating stations having a “Break Glass” panel will be acceptable. On coded systems having a device to permanently record the transmission of an alarm, “Open Door” type stations may be used). The fire alarm operating stations shall be mounted not less than 4 feet nor more than 5 feet above the finished floor as measured from the floor to the center of the box.

(5) All such alarm systems shall be tested at least once a week and a record of such tests shall be kept.

(6) Existing fire alarm systems that are effective in operation will be accepted if approved by the department of industry, labor and human relations.

(7) The gas for operation of non-combustible, non-toxic gas activated fire alarm systems shall be supplied from approved pressure cylinders on the premises. The cylinders shall have sufficient capacity and pressure to properly operate all sounding devices connected to the system for a period of not less than 10 minutes. Cylinders shall be removed for recharging immediately after use and shall be replaced by fully charged cylinders.

(8) Spare cylinders shall be kept on the premises at all times for immediate replacement and separate cylinders for testing shall be incorporated in the system.

(9) Tubing in connection with non-combustible, non-toxic gas activated fire alarm systems shall be installed in rigid metal conduit, flexible metal conduit, or surface metal raceways where subject to mechanical injury. Non-corrosive metallic tubing not less than 3/16” in diameter which will withstand a bursting pressure of not less than 500 pounds per square inch shall be used. The maximum length of 3/16” tubing shall not exceed 300 feet between charged cylinders. All tubing and other component parts shall be installed by skilled workmen in accordance with the provisions of this code.

Notes:
- See Wisconsin Administrative Electrical Code, Volume 2.

Chapter Ind 52

GENERAL REQUIREMENTS

Ind 52.01 Fire prevention, detection and suppression (p. 77)

Ind 52.02 Windows (p. 81)

Ind 52.03 Window cleaning (p. 81)

Ind 52.04 Requirements for fire-free environments (p. 82)

Ind 52.05 Size of courts (p. 90)

Ind 52.06 Ventilation of courts (p. 91)

Ind 52.16 Floor protection (p. 91)

Ind 52.17 Wall and ceiling protection (p. 92)

Ind 52.19 Gas and oil lamps; gas service (p. 92)

Ind 52.20 Electrical work (p. 93)

Ind 52.21 Location and maintenance of exits (p. 93)

Ind 52.20 Toilet routes (p. 93)

Ind 52.51 Sex designation (p. 93)

Ind 52.52 Location, light and ventilation (p. 93)

Ind 52.64 Location without outside windows, when permitted (p. 94)

Ind 52.55 Artificial light (p. 94)

Ind 52.56 Size (p. 94)

Ind 52.57 Floor and base (p. 94)

Ind 52.58 Walls and ceilings (p. 95)

Ind 52.59 Enclosure of fixtures (p. 95)

Ind 52.60 Fixtures (p. 95)

Ind 52.61 Protection from freezing (p. 97)

Ind 52.62 Disposal of sewage (p. 97)

Ind 52.63 Outdoor toilets (p. 98)

Ind 52.64 Maintenance and housekeeping (p. 98)

Ind 52.65 Laundry (p. 98)

Ind 52.66 Waste department (p. 98)

Ind 52.67 Water supply (p. 98)

Ind 52.68 Plumbing (p. 98)

Ind 52.69 Waste disposal (p. 98)

Ind 52.70 Sanitary facilities (p. 98)

Ind 52.71 Current (p. 98)

Ind 52.72 Electrical equipment (p. 98)

Ind 52.73 Eaves, gutters, downspouts (p. 98)

Ind 52.76 Fire alarm (p. 98)

Ind 52.78 Fire extinguishers (p. 98)

Ind 52.80 Fire blankets (p. 98)

Ind 52.81 First aid (p. 98)

Ind 52.82 First aid (p. 98)

Ind 52.83 First aid (p. 98)

Ind 52.84 First aid (p. 98)

Ind 52.85 First aid (p. 98)

Ind 52.86 First aid (p. 98)

Ind 52.87 First aid (p. 98)

Ind 52.88 First aid (p. 98)

Ind 52.89 First aid (p. 98)

Ind 52.90 First aid (p. 98)

Ind 52.91 First aid (p. 98)

Ind 52.92 First aid (p. 98)

Ind 52.93 First aid (p. 98)

Ind 52.94 First aid (p. 98)

Ind 52.95 First aid (p. 98)

Ind 52.96 First aid (p. 98)

Ind 52.97 First aid (p. 98)

Ind 52.98 First aid (p. 98)

Ind 52.99 First aid (p. 98)

Ind 52.101 Fire prevention, detection and suppression. (1) Sprinkler system. A complete automatic sprinkler system, as specified in section Ind 51.23, shall be provided in every building more than 80 feet in height, the initial construction of which is commenced after July 2, 1974. The requirements of this section shall not apply to open parking structures as defined in section Ind 52.10 (2).

(a) Additions to existing buildings. Building additions more than 60 feet in height shall have an automatic sprinkler system installed. The sprinkler protection shall be provided throughout the existing building unless the addition is separated from the existing building by a fire division wall as specified in section Ind 51.02 (13). The requirements of this section shall not apply to open parking structures as defined in section Ind 52.10 (2).

(b) Substitute suppression systems. When approved by the department, substitute automatic suppression systems may be used in lieu of a sprinkler system in areas where the use of water could cause unusual damage to equipment, or where water may have a limited effect or may be hazardous to use because of the nature of processes involved.

Note: The department will accept design and installation in accordance with the latest edition of the National Fire Protection Association standards for special extinguishing systems.

(c) Alternate methods. When approved by the department, alternate methods of fire prevention, detection and suppression may be provided in lieu of a complete automatic sprinkler system.

Note #1: The department will request a position statement regarding the proposed method to be submitted by the fire chief of the municipality wherein the building is located.

Note #2: The department will consider alternate methods of fire prevention, detection and suppression to include, but not limited to, fire-retardant construction, compartmentation, automatic detection systems, interior finish restriction, and partial sprinkler protection.

Register, December, 1978, No. 278

Building and hearing, ventiling and air conditioning code
(2) ADDITIONAL REQUIREMENTS FOR HIGH RISE BUILDINGS. The following requirements apply to all buildings more than 100 feet in height or having more than 10 stories. Open parking structures and buildings used for low hazard industrial processes, including the production and distribution of gas, steam or electric power, foundries and similar uses which require unusual heights to accommodate cranes, special machinery or equipment, are exempt from the provisions of this subsection.

(a) Smoke control. Natural or mechanical ventilation for the removal of products of combustion shall be provided in every story and shall consist of one or more of the following methods. Controlling devices may be automatic or manual as approved by the local fire department.

1. Panels or windows in the exterior wall which can be opened from a location other than the fire floor. Such venting facilities shall be provided at the rate of at least 20 square feet per 50 linear feet of exterior wall in each story, and distributed around the perimeter at not more than 50-foot intervals. Such panels shall be clearly identified as required by the fire department.

2. Openable windows in habitable rooms of residential units.

3. When an automatic sprinkler system is installed in compliance with section Ind 51.23, the mechanical air handling equipment may be designed to assist smoke removal. Under fire conditions, the return and exhaust air shall be taken directly to the outside without recirculation to other sections of the building.

4. A mechanical ventilation system which will prevent the transfer of smoke from the fire source to other floors of the building. The design shall be substantiated by calculations or tests showing that a pressure differential of 0.10 inch of water column will be produced.

5. Any other design which will produce equivalent results.

(b) Exit stairways. 1. All stairways shall be pressurized. The pressure across each door shall be at least 0.15 but not more than 0.20 inch of water column with all doors closed. Pressurization shall be activated by the fire alarm system, the detection systems, and the sprinkler system. In lieu of pressurization, a smokeproof stair tower, as defined in section Ind 51.17, will be accepted.

Note: The department will accept alternate designs which will produce equivalent results.

2. All stairway doors which are to be locked from the stairway side shall have the capability of being unlocked without unlatching upon a signal from the central control station.

(c) Elevators. There shall be provided at least one elevator suitable for fire department access to any floor. If the building is not provided with an approved automatic sprinkler system, the elevator lobby at each level shall be separated from the remainder of the building by an effective smoke barrier.

Note: Refer to chapter Ind 4, Elevator Code, for additional requirements.

(d) Fire alarm and detection system. 1. A manual fire alarm box shall be located adjacent to exit doors into stairway shafts and in every elevator lobby.

Register, December, 1978, No. 270
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 79

2. An approved system which will provide for automatic detection of products of combustion other than heat shall be installed in every air-handling equipment room, unless sprinklered, and in the return air portion of every air conditioning and mechanical ventilation system. Approved heat detectors may be installed in boiler rooms and furnace rooms in lieu of product of combustion detectors.

a. Detectors shall be located in the main return air and supply air ducts of each ventilation system and at each opening into a vertical return air shaft or duct.

b. The detectors shall actuate an alarm or signaling system and shut down the ventilation system except where automatic smoke control is incorporated in the system.

3. The manual alarm and automatic detection system shall conform to the Wisconsin State Electrical Code and one of the following standards (Ind 51.27 (7a)):

a. Standard for Central Station Protective Signaling Systems, NFPA No. 71;

b. Standard for Auxiliary Protective Signaling Systems, NFPA No. 72B;

c. Standard for Remote Station Protective Signaling Systems, NFPA No. 72C;

d. Standard for Proprietary Protective Signaling Systems, NFPA No. 72D.

4. Detectors shall conform to the Standard for Automatic Fire Detectors, NFPA No. 72E.

(e) Alarm and communication systems. The following alarm and communication systems shall be provided. The systems shall be supervised and exposed wiring shall be encased in a metal conduit.

1. Voice alarm system. The detection system, sprinkler water flow device and the fire alarm system shall actuate a prerecorded message or voice alarm capable of being operated from the central control station on a general as well as a selective basis to the area involved. The alarm shall be designed to be heard by all occupants within the building or designated portions.

2. Voice communication system. There shall be a voice communication system between the central control station and the following areas:

   Note: The department will accept systems installed in accordance with the Standard for the Installation, Maintenance and Use of Local Protective Signaling Systems for Watchmen, Fire Alarm and Supervisory Service, NFPA No. 72A.

a. Elevators, elevator lobbies, in stairways at every fifth floor, and all manual fire alarm boxes (2-way communication system).

b. Every office area exceeding 1,000 square feet in area (one-way address system).

c. Each dwelling unit and hotel guest room (one-way address system).
3. **Fire department communication system.** A system providing 2-way communication shall be provided at all floor levels, stairways, the central control station, and other locations required by the fire department.

   a. The system shall be designed so the fire department communication system will override the other communication systems.

   b. Wiring shall be arranged so that open circuits or short circuits on individual floors will not interfere with communications on another floor.

4. **Combined system.** When approved by the local fire department, the fire department communication system may be combined with the voice communication system and the voice alarm system.

   (f) **Central control station.** A central control station for fire department operations shall be provided in a location approved by the fire department. It shall contain the voice communication systems panel; fire detection and alarm system panels; status indicators and controls for elevators, smoke venting and air handling systems; controls for unlocking stairway doors; a public telephone; sprinkler valve and water flow detectors; and standby power controls. All fire alarm and water flow signals shall be transmitted directly to the systems indicated in Ind 52.01 (2) (d) 3.

   (g) **Standby power and light.** An approved permanently installed standby power generating system shall be provided. The system shall be equipped with suitable means for automatically starting the generator set upon failure of the normal electrical service and for automatic transfer and operation of the required electrical functions at full power within 60 seconds of such normal service failure. System supervision with manual start and transfer features shall be provided at the central control station.

   1. An on-premise fuel supply sufficient for not less than 2 hours full demand operation of the system shall be provided.

   2. The power requirement shall be determined so as to provide service to, but not limited to the following:

      a. Fire alarm system.

      b. Exit and other emergency lighting.

      c. Fire protection equipment.

      Note: Standby power to service fire pumps may be omitted if approved by the local fire department.

      d. Mechanical ventilation required by this section.

      e. Fire department elevator.

      f. Communication systems.

   (h) **Maintenance.** All life safety systems required under this section shall be tested and maintained in an operable condition. A copy of the test report shall be kept on the premises. The local fire department shall be notified whenever the life safety systems are shut down for repair.
(i) Floor level identification. Each floor level of the building shall be identified as to its number or name. Identification signs shall be posted in all required exit stairways.

Ind 52.02 Windows. (1) Every room in which one or more persons live, sleep, or are employed, except storage rooms or other rooms where the nature of the occupancy will not permit shall be lighted by a window or windows opening directly upon a street or alley, or upon a court or windows opening directly upon the same lot with the windows opening directly upon a street or alley, or upon a court or on the same lot, with the windows shall be constructed and distributed so as to afford light. Every building more than 40 feet deep measuring at right angles to the windows shall have windows on at least 2 sides.

Note: Exits and other outside openings used for natural ventilation, see Ind 64.07 and Ind 71.07.

(2) The provisions for (1) may be waived for such buildings as factory, office, mercantile, or educational facilities if provisions are made for artificial lighting as required by the building code.

1. Requirements applicable to schools or places of instruction shall be as stated in section 18-48.06.

(3) Every building opening directly upon a street or alley, or upon a court or windows opening directly upon the same lot, with the windows shall be so spaced that there will be at least 36 inches above the first floor. The openings shall be so spaced that there will be at least 36 inches above the first floor. Where a building is equipped throughout with an automatic sprinkler system approved for fire protection purposes.

Ind 52.03 Window cleaning. (1) Where the means by which the building is to be cleaned are more than 20 feet above the floor, ground, flat roof, balcony, or permanent platform, one of the following means shall be provided to protect the window cleaners.

(a) An approved portable platform that is projected through the window or supported from the ground, floor, roof, or platform level, for the protection of the window cleaners.

(b) An approved portable platform that is projected through the window or supported from the ground, floor, roof, or platform level, for the protection of the window cleaners.

(c) An approved portable platform that is projected through the window or supported from the ground, floor, roof, or platform level, for the protection of the window cleaners.

(d) An approved portable platform that is projected through the window or supported from the ground, floor, roof, or platform level, for the protection of the window cleaners.

(e) An approved portable platform that is projected through the window or supported from the ground, floor, roof, or platform level, for the protection of the window cleaners.

(f) An approved portable platform that is projected through the window or supported from the ground, floor, roof, or platform level, for the protection of the window cleaners.
window cleaner to stand upon and that is designed, constructed, main-
tained and equipped with handrail and toeboard in compliance with the
requirements of chapter Ind 1, rules on Safety.

(c) A suspended scaffold, swinging scaffold, swinging chair scaffold,
or boatwain's chair scaffold designed, constructed, equipped and main-
tained in compliance with the requirements of Wis. Adm. Code chapter
Ind 35, rules on Safety in Construction, or

(d) Other equally effective devices.

(e) Where the window consists of a fixed panel not more than 24
inches in width alongside a removable panel, the fixed panel may be
cleaned by reaching through the opening of the removable panel. Where
the window consists of a fixed panel between 2 removable panels, the
fixed panel may be cleaned by reaching through the openings if such
fixed panel is not more than 36 inches in width.

(2) For cleaning the insides of skylights (the highest parts of which
are more than 20 feet above the floor, ground, balcony or permanent
platform), to which access cannot be gained by any of the means de-
dscribed in Wis. Adm. Code section Ind 1.16 (1), scaffolds as specified
in chapter Ind 35, rules on Safety in Construction, shall be provided.

(3) All equipment, including building parts and attachments, used in
connection with window cleaning, shall be maintained in reasonably safe
condition while in use and shall be inspected at least once each month
while in use, and within 30 days before their use. It shall be the respon-
sibility of the owner of the individual safety devices or equipment to in-
spect and maintain the devices or equipment belonging to him so that
each will comply with the requirements of this section.

(4) Where the attachments specified in subsection (1) (a) are relied
upon for compliance with the provisions of this rule, said employer shall
furnish or see that there is provided, an approved suitable safety belt for
each employee while cleaning windows.

History: 1-2-66; am. Register, December, 1962, No. 84, eff. 1-1-63.

Ind 52.04 Requirements for barrier-free environments. (1)
Scope. The requirements of this section are intended to insure that all
public buildings and places of employment shall be accessible and us-
able by all citizens, including those with functional limitations.

(2) Definitions. (a) Access or accessible. Access or accessible means
the ability of a person with a functional limitation caused by impair-
ments of sight, hearing, incoordination, perception, semiambulatory or
nonambulatory disabilities to enter and leave a public building, circu-
late through a public building, and use the public toilet facilities without
assistance. Functional limitations may require aids such as wheelchairs,
crutches, braces or canes.

(b) Primary floor. A primary floor is one intended for use by the em-
ployees and/or patrons. A floor used primarily for furnace room and/or
storage areas is not considered a primary floor.

(c) Public entrance. Any major access point to a building used for the
purpose of entering the building and gaining access to a primary floor (a)
is considered a public access. Entrances used only for service or maintenance purposes, or designated for emergency exit only, are not considered public entrances.

(3) Site requirements. A means of access from an ancillary parking facility, street or alley to the building shall be provided.

Note: Section 68.616, Wis. Stats., requires curb ramps for persons with physical disabilities at intersection crosswalks on any city or village street, connecting street, or town road provided with curbs and sidewalks.

(a) Parking spaces. Where parking spaces are provided, accessible parking spaces shall be designated and provided at the rate of 2% of the total number of parking spaces provided, with a minimum of one.

1. Width. Parking spaces shall be at least 12 feet wide.

2. Identification and location. All accessible parking spaces shall be identified and located as close as possible to an accessible building entrance. Parking spaces in a parking ramp shall be located as close as possible to the main entrance of the parking ramp, to an adjacent accessible public walk, or to an accessible elevator.

3. Curb ramp location. Curb ramps shall be located to provide the shortest line of travel from the accessible parking space (a) to the accessible public entrance.

(b) Exterior walks. Exterior walks leading to accessible entrances shall comply with the following:

1. Width. Walks shall have a slip-resistant surface and shall be at least 48 inches wide.

2. Gradients. Walks shall have a side slope not greater than 2.5% (1/4 inch per foot). Walks with a gradient greater than 5% (1:20), but less than 8.3% (1:12), shall be provided with rest platforms at 30-foot intervals and shall have a handrail on one side of the walk. Walks with a gradient of 8.3% (1:12) shall comply with the requirements for ramps [Ind 52.04 (7)].

3. Handrails. Handrails shall be provided at walks where the adjacent terrain exceeds a 25% (1:4) downward slope away from the walk.

Note: The requirements for accessible walks are not intended to apply to public walks controlled by city datum, nature trails, or walks not required by this code.

(c) Communication between buildings or properties. Walks or enclosed passageways which connect 2 or more properties or buildings and are intended for public use shall provide access to each building or property.

(4) New construction. All new public buildings and places of employment shall be provided with access to a primary floor, interior circulation and toilet facilities in accordance with Table 52.04 and the requirements of section Ind 52.04 (4). All buildings with multiple uses shall comply with section Ind 52.04 (5).

Note: The footnotes in Table 52.04 designate specific corruptions and/or requirements for access to the primary floor, interior circulation, and toilet facilities for the occupancies listed.

Note: Floors used entirely for storage or mechanical purposes need not be included in determining the local gross area.

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
2(2) All buildings. Access is not required to a receiving or duplicate facilities to those provided in the same building, or located on an attached floor. Access is required to all special facilities for the employees such as, but not limited to, lounges, change rooms and lunch rooms.

2(3) Buildings having area 70,000 square feet or less. If the total gross area of the building, including all floors, is 20,000 square feet or less, suitable ventilation in each major area of the floor and throughout at least 1/3 of the floor area. Access is required to any enclosed or unenclosed area of the primary floor containing the only facility of its kind.

2(4) Buildings having area greater than 70,000 square feet. If the total gross area of the building, including all floors, is greater than 70,000 square feet, initial circulation is required to all floors and at least 2/3 of the total area of each floor. Access is required to any floor level containing the only facility of its kind.

If the required inlet facilities in buildings containing 15 or less employees and 75 or less persons are not accessible, one additional accessible toilet room for both sexes shall be provided. That inlet facility shall be located on an accessible floor and shall contain one lavatory and one water closet. A privacy lock for the door shall be provided.

If remaining or adding, or both, involves an entrance or exit and constitutes less than 25% of the total square footage, access is not required for a primary floor.

In residential dwellings, a separate accessible toilet room for use by both sexes will be acceptable providing the toilet room is located on an accessible floor, contains one lavatory and one water closet, and is furnished with a privacy lock.

Suitable sources, at the rate of 17 at the total capacity, with a maximum of 30 spaces required, shall be integrated throughout the sleeping area. One-half of the accessible waiting spaces shall be designated for persons using wheelchair, shall be located on level grade; the other half or the accessible waiting spaces shall be designated for persons using scooters, wheelchairs, or similar aids. (See details in 2.04 7.) (4) Do not apply to the walls in hospital accommodations.

In buildings containing institutional facilities, areas shall be provided to 10% of the individual space areas (i.e., sleeping areas, living rooms and similar areas), with a minimum of one. Access shall be provided to offices, lounge areas, bar and dining areas and to the only facility of its kind in residential units. Access is not required to basements, agent ball courts, baseball courts and locker rooms associated with these areas.

In particular, circulation shall be provided for any level containing the only facility of its kind.

Access shall be provided to at least 10% of the living units, with a minimum of one. In a complex of buildings, the accessible units shall be integrated throughout at least 50% of the buildings in the complex.

All doors throughout the accessible living units shall be at least 32 inches wide. All corridors within the accessible living units shall be at least 36 inches wide.

Grab bars, opening fixtures, water closets, or special bathing facilities are not required.

Access shall be provided to a primary floor with living units. In a complex of buildings, access shall be provided to at least 50% of the buildings in the complex.

Interior circulation within all living units on the accessible floor shall be accomplished through the use of stairs at least 32 inches wide. All corridors needed to provide accessibility shall be at least 36 inches wide, at laundry or storage facilities, or both, are provided in buildings with more than 20 living units per building, the laundry or storage facilities, or both, shall be accessible.

The accessible sleeping units shall be provided at a rate of 10% at the total number of units with a minimum of one. Access at least 32 inches wide and are required throughout the accessible living units. All corridors within the accessible living units, or, if needed to provide accessibility, shall be at least 36 inches wide.

Sitting-bathing toilets, seats and sitting-door en-enclosures are prohibited.

Escalators, 2 stories or less in height, are exempt from the accessibility requirements relating to parking spaces, ramps and grade-level entrances.

All doors throughout all conditioned living units shall be at least 32 inches wide. A 1 unit shall be at least 16 inches wide.

Access, sandwich circulation, and toilet facilities are not applicable to a change of use.

See section 5D 27.24 for additional requirements on accessibility.

For commodity-based residential facilities within the scope of chapter 27, new buildings and existing buildings shall be required to comply with the requirements for commodity-based residential facilities within the scope of chapter 27, new buildings and existing buildings shall be required.

For the total gross area of the building, including all floors, in less than 20,000 square feet. Initial circulation in required to all the central and general areas, as used by the patients. All one-of-a-kind facilities provided for the patients shall be located in an accessible floor.

In small institutions, 1/2 of the total number of essential institutional living units shall be accessible. Vertical transportation between tiers of cells is not required.

See section 5D 27.36 for additional requirements.

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code
(a) Access to the primary floor. Access from the exterior grade to a primary floor, via a public entrance, shall be provided by means of ramps, grade-level entrances, or other means of access approved by the department.

(b) Interior circulation. Access shall be provided to all public-use areas of the building, both horizontally and vertically. Interior circulation between floor levels shall be accomplished by the use of ramps, elevators, lifts, or other means of access approved by the department.

Note: Where elevators are provided, the department recommends that elevator control buttons and emergency call systems be located at a height from 30 inches to 48 inches from the floor. The elevator call buttons in the lobbies should be placed at a height of 42 inches from the floor. Raised lettering is recommended to identify the elevator call buttons and control buttons.

c) Toilet facilities. Accessible toilet facilities shall be provided on a primary floor or accessible from a primary floor. Every floor which is accessible, and which is provided with required toilet facilities, shall be provided with accessible toilet facilities which comply with the requirements of section Ind 52.04 (8) and the following distribution:

1. Accessible water closets shall be provided at the rate of 10% of the total number of toilet facilities provided on each accessible floor, with a minimum of one for each sex.

2. One accessible toilet room is required in buildings accommodating 10 or less employees and less than 25 patrons per section Ind 54.12 (1).

(a) 1.

(5) Buildings with multiple uses. (a) Buildings greater than 20,000 square feet. Multiple-use buildings with a total gross area greater than 20,000 square feet, including all floors, shall comply with the criteria established in Table 52.04 for each specific use. Interior circulation is required to and throughout at least 3% of each specific use area.

(b) Buildings of 20,000 square feet or less. Multiple-use buildings with a total gross area 20,000 square feet or less, including all floors, shall be provided with a means of access to and throughout at least 3% of the total area of the primary floor and toilet facilities on the primary floor. Government-owned buildings and dental and medical clinics and offices shall comply with the criteria established in Table 52.04 for each specific use.

Note: Floors used entirely for storage or mechanical purposes need not be included in determining the total gross area.

(6) Additions, remodeled buildings, and change of use. All existing public buildings or places of employment, and all additions, shall be provided with access to a primary floor, interior circulation and toilet facilities in accordance with the following:

(a) More than 50% remodeled or added. If more than 50% of the gross interior area of a building is remodeled, added to or both, the entire building shall be provided with the requirements of Table 52.04 and section Ind 52.04 (3), (4) and (9).
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 87

General

(b) 25% to 50% remodeled or added. If 25% to 50% of the gross interior area of a building is remodeled, added to or both, that part of the building which is remodeled, added to or both shall be provided with the requirements of Table 52.04 and section Ind 52.04 (4).

(c) Less than 25% remodeled or added. If less than 25% of the gross interior area of a building is remodeled, added to or both, the requirements of Table 52.04 and section Ind 52.04 (4) need not be provided unless the remodeling or addition involves an entrance or exit or toilet facilities.

1. Exception. Additions, larger than 20,000 square foot gross area, shall comply with Table 52.04 and sections Ind 52.04 (3), (4) and (9) regardless of the percent of floor area of the entire building.

(d) Toilet facilities in remodeled buildings. If an existing building having passenger elevators is remodeled in accordance with the percentages above, accessible toilet room facilities for each sex shall be provided to serve each 6 floors, or fraction thereof, and shall comply with the requirements of section Ind 52.04 (8).

(e) Change of use. If the use of an existing building is changed to a new use and the building undergoes physical remodeling, the building shall comply with the percentages established in section Ind 52.04 (6).

(f) Remodeling in stages. The percentage requirements established in this subsection shall apply to the accumulative sum of any remodeling and/or additions undertaken after May 15, 1974.

(7) Ramp details. (a) Ramp slope. Ramps shall have a slope of not more than one foot of rise in 12 feet of run. An interior ramp with a slope of one foot of rise in 8 feet may be used to overcome a total height not greater than 2 feet. The ramps shall have a slip-resistant surface and shall have no side slope.

(b) Ramp width. Ramps shall be at least 4 feet wide, of which not more than 4 inches on each side may be occupied by a handrail.

(c) Ramp handrails. Ramps shall have a handrail on each side which shall be at least 2 feet 6 inches high (preferable height, 2 feet 8 inches). Handrails on unenclosed ramps shall include an intermediate parallel rail at mid height. Handrails are not required on interior ramps where the slope is less than one foot of rise in 20 feet of run.

(d) Ramp clearance. Where ramps are provided to accessible doorways, the floor on each side of the doorway shall be level for a distance of 5 feet from the door.

(e) Ramp platforms. Ramps having a 1:12 slope shall have a 5-foot long level platform at 30-foot intervals. Ramps shall have a level platform at least 5 feet long where they turn and at least 5 feet of level clearance at the bottom of the ramp. Ramp platforms are not required on interior ramps where the slope is less than one foot of rise in 20 feet of run.

Register, December, 1975, No. 276
Building and heating, ventilating
and air conditioning code
(8) * Toilet facility details. (a) Accessible toilet rooms and compartments. Accessible toilet rooms and toilet compartments shall be sized to provide ease of access, usability and uninterrupted mobility. Fixtures, doors, and other obstructions shall be arranged to insure accessibility.

(b) Water closet compartments. Accessible water closet compartments shall be designed in accordance with the minimum design standards as established in Table 52.04-A, as approved by the department. Sufficient clearance must be maintained to permit the door to the toilet room compartment to open at least 90 degrees.

Note: The water closet compartment specifications contained in Table 52.04 A do not apply to toilet rooms containing one water closet and one lavatory; or to bathrooms containing a water closet, a lavatory and a bathing facility. See the appendix for examples of accessible toilet room and bathroom arrangements.

*Offset 16 to 18 inches from center line of water closet to wall.

(c) Grab bars. Each grab bar shall be designed and anchored to support a weight of at least 250 pounds, applied at the bar. The grab bars shall have a smooth finish, with an approximate outside diameter between one inch to 1½ inches, and with ½ inch clearance between rail and wall.

1. Side-mounted grab bars. Side-mounted grab bars shall be installed 33 inches high and parallel to the floor.

2. Rear-mounted grab bars. Rear-mounted grab bars shall be placed 33 inches high and parallel to the floor. If a tank-type water closet is used, which prohibits the installation of a grab bar 33 inches off the floor, the grab bar shall be mounted 2 inches above the top of the tank.

3. Single-fixture toilet rooms. In single-fixture toilet rooms containing one water closet and one lavatory, one grab bar shall be located on the wall adjacent to the water closet and one on the wall behind the water closet.

4. Bathing facilities. Grab bars for bathtubs shall be located along the side wall and one end wall and shall be mounted 4 to 6 inches above the rim of the tub. In shower stalls, grab bars shall be mounted 3 feet 6 inches above the floor of the shower stall and shall be located on the back wall and the wall opposite the seat. See Appendix for diagrams.

5. Seat-mounted grab bars are not permitted.

*See Appendix A for further explanatory material.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

General

(d) Water closets. The seat height of the water closet shall be 16 inches to 20 inches above the floor.

(e) Lavatory. At least one lavatory, mounted at a height which allows 28 inches clear space at the bottom of the apron and a maximum rim height of 34 inches, shall be provided.

Note: It is recommended that water supply controls be single lever controls and that exposed hot water pipes be insulated.

(f) Mirror and towel dispensers. At least one mirror and towel dispenser or hand dryer, when provided, shall be mounted not more than 40 inches above the floor.

Note: The department will accept toilet rooms, individual toilet compartments and grab bars as illustrated in the Appendix.

(9) Miscellaneous Details. (a) Doors. 1. Door Sizes. All accessible entrance doors and passageway doors shall be at least 32 inches in width.

2. Door thresholds. Thresholds at exterior doors shall not extend more than ½-inch above the finished floor and exterior platform. Weather-stripped thresholds shall not exceed one inch above the finished floor and exterior platform, including the weather-stripping. All exterior thresholds shall be not less than 4 inches in width. Interior thresholds shall extend not more than ½-inch above the finished floor or carpeting. All thresholds shall be beveled to provide smooth, unbroken surfaces.

Note: Lever handles or door handles are recommended over conventional door knobs. Kickplates, 16 inches high, are recommended on the accessible side of doors. Automatic power-operated doors are recommended at entrances. Time-delay door closers are recommended at all accessible doors. The manual pull or push of a door is recommended not to exceed 8 pounds.

(b) Platforms. At least 18 inches of clear platform space shall be provided on the door knob side of all exterior doors. The platform shall have a side slope not greater than 2.5% (¼ inch per foot) and shall be at least 4 feet in length when the door swings inward or 5 feet in length when the door swings outward.

(c) Identification Signs. 1. The international symbol for barrier-free environments shall identify all accessible entrances, toilet facilities, drinking fountains, telephones and parking spaces.

2. The international symbol for barrier-free environments shall be placed at all entrances indicating the location of the nearest accessible entrance(s) and accessible toilet facilities. The symbol at the exterior of the building shall be legible from adjacent streets, driveways or public walks.

(d) Wheelchair Functions. All 90-degree, 180-degree, 360-degree and S-turns shall be designed to provide ease of access, usability and uninterrupted mobility.

Note #1: The standard wheelchair dimensions are: length including footrest and seat, 42 inches; width, including hands and knuckles, 31 inches.

Note #2: The minimum space required to turn 90-degree, 180-degree, 360-degree and S turns is illustrated in the Appendix.

*See Appendix A for further explanatory material.
(e) **Grates.** All openings in gratings will be in the path of access shall not exceed ½-inch in width, and shall be installed perpendicular to the direction of travel. Spacers perpendicular to the grate and flush with the top of the grate shall be provided at not more than 18-inch intervals.

(f) **Water fountains.** Water fountains shall be accessible and installed at or adapted to a usable height.

**Note:** Conventional floor-mounted water coolers can be serviceable to patrons with functional limitations if a small fountain is mounted on the side of the outer 30 inches above the floor. Fully recessed water fountains are not recommended and should not be recessed in an above unless the above is wider than a wheelchair.

(g) **Public telephones.** Where coin telephone(s) are provided for public use, a minimum of one telephone shall be accessible.

**Note:** It is recommended that the height of the telephone coin slot be not more than 34 inches above the floor, with the dial no more than 46 inches from the floor. An adjustable volume control should be provided in areas where such service is appropriate.

**History:** Cr. Register, December, 1974, No. 228, eff. 1-1-75; r. and re enr. (3) (b), (4), (5) and (6) (a) and (b), am. (6), (7) (a), (7) (e), (8) (c) and (d), r. (3) d) 3, Register, December, 1976, No. 240, eff. 1-1-76; am. table, (4) (d) 2 and (9) (f), Register, December, 1976, No. 262, eff. 1-1-77; cr. (2) (a) and (f), (3) (a) 3, am. (2) (6) (intro.), (4) (b) and (c) 1, (5), (7) (a), (c) and (e), (8) (b) and (9) (a) 1 and 2, r. and re enr. (8) (h), Register, December, 1977, No. 264, eff. 1-1-78; am. (4) (e) 2, (5) (b), (6) (a) to (c), (7) (e) and (8) (c), Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 52.05 Size of courts.** (1) In applying the following requirements, a building from 30 to 48 feet high shall be considered as having at least 3 stories, and each additional 13 feet shall be considered an additional story.

(2) **Outer lot line courts shall be not less than 5 feet wide for a court 2 stories or less in height and 40 feet or less in length, measured from the lot line to the wall of the building.** For each additional story in height, the width of such court shall be increased one foot; and for each additional 15 feet or fraction thereof in length, the width of such court shall be further increased one foot.

(3) **Outer courts between wings or parts of the same building, or between different buildings on the same lot, shall be not less than 6 feet wide for a court 2 stories or less in height and 40 feet or less in length.** For each additional story in height, the width of such court shall be increased one foot, and for each additional 10 feet or fraction thereof in length, the width of such court shall be further increased one foot.

(4) **Where outer courts or outer lot line courts open at each end to a street or other open space not less than 15 feet wide, the above lengths may be doubled.**

(5) **Inner lot line courts one story high shall be not less than 5 feet wide and not less than 45 square feet in area.** Inner lot line courts 2 stories high shall be not less than 6 feet wide and not less than 60 square feet in area. For every additional story, every such inner lot line court shall be increased by at least one lineal foot in length and one lineal foot in its width.

*See Appendix A for further explanatory material.*

Register, December, 1978, No. 976
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

(6) Inner courts shall be not less than 10 feet in width nor less than 150 square feet in area for courts 2 stories or less in the height; and for every additional story every such inner court shall be increased by at least one lineal foot in its length and one lineal foot in its width.

(7) Courts shall not be covered by a roof or skylight but the entire required area shall be open and unobstructed from the bottom thereof to the sky. No fire escape or stairway shall be constructed in any court unless the court be enlarged proportionately.

(8) Walls of inner courts whose least horizontal dimension is less than one-fourth the height, shall be faced with material with a permanent white surface or shall be painted white at least every 2 years.

(9) No buildings shall be altered or enlarged to encroach upon space reserved under this code for light and air on the lots or parcels of ground on which such building is erected.

History: 1-2-56; am. (2) and (5), Register, September, 1973, No. 213, eff. 10-1-73.

Ind 52.06 Ventilation of courts. At the bottom of every shaft or inner court there shall be sufficient access to such shaft or court to enable it to be properly cleaned out. Every inner court which is required under Wis. Adm. Code section Ind 52.02 and which is more than one story in height shall have an intake for fresh air, leading from the street or other open space. The area of such intake in square feet shall equal at least .002 of the number of cubic feet contained in said court, but such area need not be more than 50 square feet. Every intake shall be of not less than 2-hour fire-resistive construction and unless said intake is used as a passageway for persons, there shall be no openings into the same other than the inlet and outlet.

Ind 52.16 Flour protection. (1) All stoves and ranges used for cooking, heating or laundry purposes using solid or liquid fuel, and which are more than 16 square feet in horizontal area or which have a flame at the bottom shall be placed on a fire-resistive floor projecting at least 2 feet on each side. If such floor rests on or is in contact with any combustible material, then the fire-resistive floor layer shall be at least 5 inches thick and shall be hollow, with air spaces running horizontally through the same. The air spaces shall be open at both ends and shall be so placed that air can circulate through them; the horizontal area of the air spaces shall equal at least one-half the horizontal area of the slab.

(2) The air spaces may be secured by using hollow tile placed end to end, or by embedding wrought or sheet iron pipes in a layer of concrete. The air spaces should parallel the short dimension of the slab.

(3) If the stove or range is raised at least 6 inches above the floor and such air space is not enclosed, then the fire-resistant floor layer may be reduced to not less than 2 inch solid thickness, without air spaces, provided it is covered with sheet metal.

(4) All stoves and ranges using solid or liquid fuel and which are not more than 16 square feet in horizontal area and not having a flame at the bottom shall, if placed on a combustible floor, be raised at least 6 inches above the floor, and such air space shall not be enclosed. Such floor shall

*See Appendix A for further explanatory material.
be protected with a stove board of sheet metal or asbestos, projecting at least one foot on all sides.

(5) Gas ranges, domestic hot water heaters and hot plates shall be supported at least 6 inches above any wood floor or other combustible material and, if less than 12 inches above the floor, the wood shall be protected by a metal shield, or such equipment may rest on a masonry support.

(a) The above dimension of 6 inches may be reduced to 3½ inches if the bottom is suitably protected with a metal shield.

**Ind 52.17 Wall and ceiling protection.** (1) All stoves and ranges used for cooking or laundry purposes and all domestic hot water heaters shall be placed at least 24 inches away from any combustible wall, partition or ceiling, except that such distance may be reduced to 12 inches if the wall, partition or ceiling is protected with at least ¾ inch asbestos board covered with sheet metal, or with an equivalent protection.

(2) The above distances may be reduced one-half in the case of stoves and ranges less than 16 square feet in area, and also in the case of gas ranges of greater area if proper insulation is incorporated in the back of the range.

**Ind 52.19 Gas and oil lamps.** (1) Gas and oil lamps shall not be used where electricity is available, except within living units of apartment buildings.

(2) Gas and oil lamps shall be placed at least 6 feet above the floor level, at least 6 inches from any combustible partition or wall, and at least 2 feet (measured from top of flame) below any combustible ceiling unless properly protected by a metal shield with at least 2 inches of air space above. Swinging brackets shall be provided with a guard or stop so that the light cannot come nearer to the partition or wall than one foot.

In aisles and public passageways, every such light shall be protected by an incombustible guard unless the light is at least 7 feet above the floor. Gas and oil lights shall be kept at least 2 feet from any drape or window curtain.

(3) Every gas supply main shall have a service cock outside of the building, so placed and maintained that it can be shut off at any time without entering the building.

**History:** 1-2-56; am (1), Register, September, 1978, No. 783, eff. 10-1-78.

**Ind 52.20 Electrical work.** All electrical work shall conform to the requirements of the Wisconsin state electrical code of the department of industry, labor and human relations.

**Note:** For the design requirements for transformer vaults, see chapter E 150 of the Wisconsin state electrical code.

**History:** 1-2-56; am Register, January, 1961, No. 51, eff. 2-1-61.

**Ind 52.21 Location and maintenance of exits.** Every exit mentioned in Wis. Adm. Code sections Ind 51.14 to 51.19, inclusive, shall lead to a street, alley or open court connected with a street. All such exits and all

---

*See Appendix A for further explanatory material.*

Register, December, 1978, No. 276

Building and heating, ventilation

and air conditioning code.
passageways leading to and from the same, shall be kept in good repair and unobstructed at all times.

Ind 52.22 Television and radio receiving antenna. History: 1-2-56; r. Register, December, 1978, No. 276, eff. 1-1-79.

SANITATION REQUIREMENTS

Ind 52.50 Toilet rooms. (1) Every place of employment and public building shall have toilet rooms as provided in the occupancy classifications of this code, completely enclosed and so arranged as to ensure privacy, unless otherwise exempted.

History: 1-2-56; am. Register, December, 1962, No. 84, eff. 1-1-58; am. Register, December, 1976, No. 282, eff. 1-1-77.

Ind 52.52 Sex designation. Where separate toilet rooms for each sex are required by this code, each toilet room shall be marked with regard to the sex which uses it; words such as MEN or WOMEN, in letters not less than one inch high, or symbols may be used.

History: 1-2-56; am. Register, September, 1977, No. 246, eff. 10-1-77; am. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 52.53 Location, light and ventilation. (1) Every toilet or bathroom shall be so located as to open to outside light and air, by windows or skylights opening directly upon a street, alley or court, except as provided in Wis. Adm. Code section Ind 52.64.

(2) The gross area for a toilet room containing one water closet or urinal shall be at least 4 square feet with at least 2 square feet openable.

(a) Bathrooms containing a water closet or urinal shall be considered as a toilet room.

(3) No toilet room shall have windows or ventilator openings in any elevator shaft or inner court that has windows of habitable rooms above.

(4) Every toilet room having more than one fixture (closets and urinals) shall be ventilated in accordance with the provisions of section Ind 64.69, except that this requirement shall not apply to chemical or septic toilets which are installed in accordance with the provisions of the chemical toilet code or the septic toilet code issued by the state department of health and social services.

(a) The size of gravity vent ducts, if surmounted with effective siphon type hoods, may be determined as follows: \( AX^2 = \text{net cross sectional area of vent duct in square feet} \) \( \leq 300 \)

Where \( A = \text{floor area in the toilet room in square feet} \).

History: 1-2-56; am. Register, December, 1962, No. 84, eff. 1-1-58; r. and rec. Register, October, 1967, No. 142, eff. 11-1-67; am. (3), Register, September, 1973, No. 213, eff. 10-1-73; am. (4) (intro.), Register, December, 1975, No. 240, eff. 1-1-76.

Ind 52.54 Location without outside windows; when permitted.

(1) SINGLE FIXTURE TOILET ROOMS AND BATHROOMS. Windows may be omitted in bathrooms or toilet rooms containing a single fixture (water closet or urinal) and lavatory or bathing facility where artificial light

*See Appendix A for further explanatory material.*
and either mechanical exhaust ventilation or an approved duct-less air circulating and treatment device is provided.

Note: The department will accept ductless air circulating and treatment devices conforming to standard C-10 as adopted by the National Sanitation Foundation (NSF).

Note #2. The department of health and social services prohibits the use of ductless air circulating and treatment devices in licensed hospital and nursing homes. (See Wis. Adm. Code section R 52.27 (2) (a) and Hill-Burton, “Minimum Requirements of Construction and Equipment for Hospital and Medical Facilities,” HRW publication no. (HRA 74-4051)

(2) MULTIPLE FIXTURE TOILET ROOMS. Toilet rooms with more than one fixture (water closet or urinal) will be permitted without windows if mechanical ventilation, in accordance with the requirements of section Ind 64.65, and artificial light are provided.

History: 1-2-66; r. and recr. Register, October, 1969, No. 46, eff. 11-1-67; am. Register, December, 1976, No. 146, eff. 1-1-77; r. and recr. Register, December, 1977, No. 204, eff. 1-1-78.

Ind 52.55 Artifical light. Every toilet room, except those within living units, shall be artificially lighted during the entire period that the building is occupied, wherever and whenever adequate natural light is not available, so that all parts of the room, especially the toilet compartments, shall be provided with artificial light intensity of not less than 2.5 footcandles at the floor level.

History: 1-2-66; am. Register, September, 1973, No. 211, eff. 10-1-73.

Ind 52.56 Size. Every toilet room shall have at least 14 square feet of floor area with a minimum width of 3 feet, and at least 100 cubic feet of air space for each water-closet and each urinal in addition to the space required for lavatories if installed within the toilet room.

Ind 52.57 Floor and base. Every toilet room, except those within living units of apartment buildings, shall have the entire floor and the side walls to a height of not less than 6 inches made waterproof with ceramic tile, terrazzo, painted concrete, marble slate, monolithic asphalt or other approved material impervious to water.

Note: This section is also intended to prohibit the use of wall registers within 6 inches of the floor, baseboard registers and floor registers.

History: 1-2-66; am. Register, September, 1973, No. 213, eff. 10-1-73.

Ind 52.58 Walls and ceilings. (1) The walls and ceilings of every toilet room shall be completely covered with smooth non-absorbent material.

(2) The interior surface of walls and partitions shall be of light color to improve illumination and facilitate cleaning.

History: 1-2-66; r. and recr. Register, September, 1969, No. 46, eff. 10-1-69; am. (1) Register, December, 1977, No. 204, eff. 1-1-78.

Ind 52.59 Enclosure of fixtures. (1) The fixtures (closets and urinals) in every toilet room shall be arranged to ensure privacy. Water-closets shall be enclosed with partitions. Urinals shall be placed against walls and arranged individually. Individual floor type urinals shall be placed against walls at least 7 feet 0 inches high.

*See Appendix A for further explanatory material.

Register, December, 1978, No. 278
Building and heating, ventilating
and air conditioning code
(a) Exception. The above requirements need not apply to toilet rooms accommodating only a single closet or urinal.

(2) A space of 6 to 12 inches shall be left between the floor and the bottom of each partition. The top of the partition shall be from 5½ to 6 feet above the floor. Doors with the top 6½ to 6 feet above the floor, and the bottom 6 to 12 inches above the floor, shall be provided for all water-closet compartments. All partitions and doors shall be of material and finish required for walls and ceilings under Wis. Adm. Code section Ind 52.58.

(3) The water closet compartments in toilet rooms shall be not less than 36 inches in width, and shall be not less than 54 inches in depth with a clearance of not less than 24 inches between the fixture and the compartment door when closed except as specified in subsection Ind 52.04 (8). Compartment doors which are hung to swing inward shall clear the fixture not less than 2 inches.

(4) No admission fee shall be charged for the use of any toilet facility in public buildings or place of employment. Key-locking of toilet rooms is prohibited in all buildings except service stations and filling stations having exterior toilet room access.

Note: Section 140.085, Wis. Stats., prohibits charging a fee for the use of toilet facilities and imposes a fine of $10 to $50 for violations.

History: 1-2-56; am. (3) and cr. (4), Register, November, 1968, No. 96, eff. 12-1-68; am. (2), Register, February, 1974, No. 218, eff. 3-1-74; cr. (4), Register, December, 1974, No. 229, eff. 1-1-75; am. (8), Register, December, 1975, No. 249, eff. 1-1-76; cr. (4), Register, December, 1976, No. 262, eff. 1-1-77; am. (1), Register, December, 1977, No. 284, eff. 1-1-78.

Ind 52.60 Fixtures. (1) WATER CLOSETS. Only water closets of porcelain, vitreous china, stainless steel or other nonabsorbent materials shall be used. All water closets in public buildings and places of employment shall have elongated bowls and hinged, open-front seats without cover. Water closets in apartments, day care centers, individual executive offices, and sleeping units of hotels and motels may be of the round bowl type, provided with a hinged, closed-front seat, with or without cover.

(2) URINALS. (a) Stall type. Stall-type urinals shall be set into the floor, and the floor shall be graded toward the fixture. Spaces between stall-type urinals, or urinals and sidewalls, shall be filled in flush with the front and top of the urinal with nonabsorbent material if the space is less than 12 inches.

(b) Wall type. Wall-hung urinals may be installed in all buildings except elementary schools (kindergarten through 8th grade).

Note #1: The definitions and general classifications for schools are found in section 115.01, Wis. Stats.

Note #2: The department recommends that wall-hung urinals be installed at a height between 22 inches to 24 inches above the floor.

(c) Flushing devices. The urinals shall be equipped with an effective flushing device.

*See Appendix A for further explanatory material.
(d) **Multiple urinals.** Batteries of urinals shall be spaced not less than 30 inches center-to-center. The center line of a single urinal shall be at least 16 inches from the nearest sidewall or partition.

(e) **Materials.** Only individual urinals of porcelain, vitreous china, stainless steel, or other nonabsorbent materials approved by the department shall be used.

(f) **Floor drain.** A stall-type urinal, or floor drain located not more than 12 inches from a wall supporting wall-hanging urinals, shall be provided for each group of 4, or less, urinals.

3) **HAND-WASHING AND DRYING FACILITIES.** Hand-washing facilities shall be provided in all places of employment and public buildings in accordance with the requirements of this subsection.

(a) **Lavatories.** Lavatories shall be of an approved type and shall be provided with hot and cold running water. The lavatories may be equipped with a hot and cold regulating device. If a multiple-use lavatory is installed, 24 linear inches of wash sink or 20 inches measured along the edge of a circular basin will be considered equivalent to one lavatory.

(b) **Hand-drying facilities.** Individual hand towels, sections of cloth or paper, or clean individual sections of continuous toweling, convenient to the lavatories, shall be provided. Hand-drying facilities shall be provided at the ratio of at least one unit for every 3 lavatories. Warm-air blowers may be substituted for up to one-half of the required hand-drying units. Warm-air blowers shall provide air at not less than 90° F, nor more than 140° F.

Note: The department will accept the qualified blowers listed by Underwriters' Laboratories, Inc.

(c) **Toilet soap.** Soap or similar cleansing agents shall be provided.

(d) **Receptacles.** Receptacles shall be provided for the disposal of used towels and other waste materials.

4) **DRINKING FACILITIES.** Drinking facilities shall be provided in all buildings except in areas where food and drinks are served. Drinking facilities shall not be installed in toilet rooms, except in residential occupancies. Drinking fountains, coolers or individual cups at a potable water source may be provided. Common drinking cups are prohibited.

Note: Where running water is not available, a covered drinking water container, equipped with a faucet or bubbler, may be provided. The container should be cleaned and sanitized at frequent intervals.

5) **BATHING FACILITIES.** Bathing facilities shall be provided for the specific occupancies outlined in the occupancy chapters of this code.

(a) **Showers.** Shower compartments shall have at least 1,024 square inches of floor area and shall be at least 30 inches in the minimum dimension. Each shower room or compartment shall be constructed of material impervious to moisture. The floor of the shower room or compartment shall be provided with a slip-resistant finish.

---

*See Appendix A for further explanatory material.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

(b) *Hot and cold water.* Bathing facilities shall be provided with hot and cold water and be equipped with a hot and cold water regulating device. The device shall be plainly marked. Supply or feed pipes to showers shall be placed overhead or protected to avoid the probability of a person coming in contact with the hot water pipes.

(c) *Toilet soap and towels.* Employees who use showers shall be provided with soap or other appropriate cleansing agents and clean individual towels.

Note: See chapter II 62, rules of the department of health and social services, for special fixture requirements.

History: 1-2-56; r. and recr., Register, September, 1969, No. 45, eff. 10-1-59; am. (1), Register, September, 1973, No. 213, eff. 10-1-73; r. and recr., Register, December, 1974, No. 228, eff. 1-1-76; am. (1) and (2) (d), r. and recr. (2) (b), or. (2) (f), (g), (4) and (6), Register, December, 1976, No. 259, eff. 1-1-77; am. (2) (e), Register, May, 1978, No. 259, eff. 6-1-78.

Ind 52.61 Protection from freezing. All water-closets and urinals and the pipes connecting therewith shall be properly protected against freezing, so that such water-closets and urinals will be in proper condition for use at all times.

Ind 52.62 Disposal of sewage. (1) Each water-closet and urinal, and each lavatory or slop sink, located in a toilet room shall be connected with a sewer and water system, where such systems are available. In locations where a sewer system is not available, or cannot be made available, the disposal of human waste may be accomplished as follows:

(a) Sewage treatment tank and disposal system.

Note: For detailed requirements on such systems see state plumbing code.

(b) Where the local conditions make it impractical to install such system, outdoor toilets, as described in Wis. Adm. Code section Ind 52.63, or other facilities, such as septic toilets installed in accordance with the provisions of the septic toilet code issued by the department of health and social services, may be used; provided that in the case of places of employment for more than 10 persons, schools larger than 2 rooms, and apartment houses, water-flush toilets as herein described shall be provided, unless outdoor toilets or other facilities are permitted in writing by the department of industry, labor and human relations or the department of health and social services. In every case where chemical or septic toilets are installed, the approval of plans and specifications therefore by the department of health and social services shall be secured before work is started.

Ind 52.63 Outdoor toilets. (1) Outdoor toilets shall comply with Wis. Adm. Code sections Ind 52.50 to Ind 52.59, inclusive, and in addition:

(a) No privy, with or without a leaching pit or other container, shall be erected or maintained within 50 feet of any well, 10 feet of the line of any street or other public thoroughfare, 5 feet of the property line between premises or 25 feet of the door or window of any building.

(b) Located on ground that is well drained, and where there is no possibility of contaminating any drinking water supply.

See Appendix A for further explanatory material.
(c) Provided with suitable approach, such as concrete, gravel or cinder walk.

(d) The foundations shall be of concrete or other masonry.

(e) The vault shall extend at least 6 inches above ground, be as dark as possible, and be proof against entrance by flies, rats, or other vermin. The upper portion shall be of concrete, or of brick or stone laid in cement mortar. If in poorly drained soil, the entire vault shall be of concrete, or brick, or stone, laid in cement mortar.

(f) All windows, ventilators and other openings shall be screened to prevent the entrance of flies, and all doors shall be self-closing. A separate ventilator shall be provided for the vault and shall extend from the vault to not less than one foot above the roof and be provided with an effective ventilating hood.

(g) The entire installation shall be kept clean and sanitary. Milk of lime (freshly slaked lime) or other equally effective disinfectant shall be used in the vault and in the urinal trough in sufficient quantities, and at frequent intervals. The floors, seats and urinals shall be scrubbed as often as necessary. The vault shall be cleaned out at proper intervals.

**Ind 52.64 Maintenance and housekeeping.**

(1) **Maintenance of toilets.** Every toilet room, and every part thereof, including walls, floor, ceiling and fixture therein, shall be kept clean, efficient, and in good repair.

(2) **Paper.** In every toilet room, sufficient toilet paper made of material which will not interfere with the operation of the system or obstruct the fixtures, shall be provided.

(3) **Defacement.** Indecent or suggestive marks, pictures, or words are forbidden in toilet rooms, and such defacement when found shall be removed at once.

(4) **Service closets.** In buildings having 5 or more fixtures (water closets and/or urinals) a service closet shall be provided conforming with the requirements for toilet rooms.

(a) The service closet shall be supplied with mop, broom, bucket, soap, toilet paper, toweling and other equipment for sanitary upkeep of toilet rooms.

**History:** 1-2-56; r. and recr. (4), Register, October, 1967, No. 142, eff. 11-1-67.

**History:** Chapter Ind 53 as it existed on December 31, 1974, was repealed and a new chapter Ind 53 was created Register, July, 1974, No. 226, effective January 1, 1976.

**Ind 53.01 Scope.** This chapter provides the minimum requirements for the structural design of all buildings, structures and foundations to provide safe support of all dead loads, superimposed live and special loads, without exceeding the prescribed allowable stresses or departing from accepted engineering practice.

**Note:** Wis. Adm. Code chapters Ind 1000-2000, Safety and Health, provides requirements for the safe assembly of materials at the construction site.

**Note:** All standards referred to in this chapter will be identified by the designation and the number of standard followed by a cross reference. The cross-reference will give full detail of the subject name and year of standard. Example: ASTM C-55 [Ind 51.25 (16)].

**History:** Cr. Register, July, 1974, No. 226, eff. 1-1-75.

---

**PART I**

## MINIMUM ALLOWABLE LOADS

**Ind 53.10 Dead loads.** All buildings and structures, and parts thereof, shall be designed and constructed to support the actual dead weight of all component members in addition to the weight of partitions, ceiling, building and heating, ventilating and air conditioning code.
finishes, floor finishes, stairways, safes and service equipment such as sprinkler systems, plumbing stacks, heating and air conditioning equipment, electrical equipment, elevators, fans and similar fixed equipment which become a part of the building.

**Note:** Unless the project owner submits a written application for waiver, the department will consider 3 pounds per square foot as minimum service equipment load.

**History:** Cr. Register, July, 1974, No. 223, eff. 1-75.

**Ind 53.11 Live loads.** (1) All buildings and structures, and parts thereof, shall be designed and constructed to support the superimposed live loads, specified in Table 53.1, uniformly distributed in pounds per square foot of horizontal area. These load requirements shall be considered only as a minimum. In every case where the loading is greater than this minimum, the design of the building or structure, or part thereof, shall be for the actual load and loading conditions. The most severe distribution, concentration and combination of design loads and forces shall be taken into consideration.

</tbody>
</table>

(2) Loads not specified in Table 53-I. See Ind 53.11 (1).

(3) Live load reductions.

(a) No reduction of live load shall be allowed in the design of any slab or joist.
(b) No reduction of live load shall be allowed in the occupancies mentioned in Table 53.1 subsection (d) storage and (e) assembly areas.

(e) For determining the total live load carried by foundations, columns, piers, and walls, the following reductions can be applied to the entire floor area tributary to these members:

<table>
<thead>
<tr>

</tr>
<tr>
<td>carrying 9 or more floors and roof</td>
<td>55%</td>
</tr>
</tbody>
</table>

(d) Except for roofs, a reduction in live load of one % per 20 square feet is allowed for beams and girders which have a tributary area in excess of 150 square feet. The maximum reduction should not exceed 15% and such reduction shall not be carried into the structural members supporting these beams and girders.

(4) Roof loads. Roof loads shall be as indicated in the zone map for roof loads. (The loads are to be applied to horizontal projections.)
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 103

(a) Special purpose roofs. Greenhouses shall be designed for not less than one-half the value specified for roof loads.

(b) * Increase in roof loads. When there are elevation differences on roof levels, parapets, canopies or valleys which may cause excess snow, ice and/or water accumulation, the designer shall make special provisions for increased loading at such locations.

Note: The department will accept special provisions such as outlined in, but not limited to, "Structural Information for Building Design in Canada," Supplement No. 3, National Building Code of Canada, or the recommendations of the Metal Building Manufacturers Association.

History: Or. Register, July, 1974, No. 223, eff. 1-1-75; am. (3) (d) (4) (a), Register, December, 1974, No. 228, eff. 1-1-75; am. (1) (d) 3 b, Register, December, 1977, No. 264, eff. 1-1-78.

Ind 53.12 Wind loads. (1) Loading. Every building (including all components of the exterior wall) and structure shall be designed to resist a minimum total wind load in accordance with the following table:

<table>
<thead>
<tr>

</table>

The wind pressure shall be taken on the gross area of the vertical projection of the building or structures facing the wind. No allowance shall be made for the shielding effect of other buildings and structures. For purposes of wind load design, the height shall be measured above the average level of the adjoining ground.

(2) Uplift and suction forces. Buildings and structures, including attachment of roof to building or structure and anchorage of building or structure to the foundation, shall be designed and constructed to withstand a wind pressure acting outward normal to the surface equal to the values set forth in Ind 53.12 (1). These suction and uplift forces need not be considered as additive to the design wind loads in the overall analysis of the building or structure. Roof overhangs, eaves, cornices, canopies and buildings open on one or more sides shall be designed and constructed to withstand an upward pressure of at least 30 PSF, unless a higher value is indicated in Ind 53.12 (1).

(3) Overturning moment. The overturning moment due to wind load shall not exceed ¾ of the moment of stability due to dead load only, unless the building or structure is anchored to foundations of sufficient weight to resist this force. The weight of earth superimposed over footings may be used to calculate the dead load resisting moment. Sufficient diaphragm bracing, diagonal bracing or rigid connections between uprights and horizontal members shall be provided to resist distortions.

(4) Shape factors. The following shape factors may be used for the design of structures such as chimneys, tanks and solid towers in conjunction with Ind 53.12 (1).

---

*See Appendix A for further explanatory material.

(5) Wind load analysis. More exact wind load analysis will be acceptable if a recognized procedure is used.

Note: The department will accept recognized procedures such as, but not limited to, Department of Navy, Bureau of Yards and Docks, NAVFAC DM 2 (Dec. 1961); or "Wind Forces on Structures," by the Structural Division of ASCE Test Committee on Wind Forces (ASCE Transactions, Vol. 128, Part II, Paper No. 5205).

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75; am. (2). Register. December, 1976, No. 252, eff. 1-1-77.

Ind 53.13 Impact loads. Structural elements carrying live loads which induce impact shall have the live loads increased by the following minimum percentages in the structural design consideration of such forces:

For supports of elevators ................................................................. 100
For traveling crane support girders, monorail supports, and their connections:
  Cab operated cranes ......................................................... 25
  Pendant operated cranes ............................................. 10
  Monorail cranes ............................................................. 25
For supports of light machinery .................................................. 20
For supports of vibrating machinery or power driven units .............. 50
For hangers supporting floors and balconies ............................... 33

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75; cr. and sect. (4), renum. (2) to be 53.14, Register, December, 1977, No. 264, eff. 1-1-78.

Ind 53.14 Horizontal and longitudinal crane forces. The lateral force on crane runways shall be equal to 20% of the sum of the crane capacity and the crane trolley (but exclusive of other parts of the crane). The force shall be assumed to be applied at the top of the rail, one-half on each side of the runway, and shall be considered acting in either direction normal to the runway rail. The longitudinal force (in the direction of rail) shall be taken as 10% of the maximum wheel loads of the crane applied at the top of the rail.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-76; renum. from 53.14 (2), Register, December, 1977, No. 264, eff. 1-1-78.

Ind 53.15 Load combinations. Allowable stresses may be increased 33 1/3% when wind loads are acting in combination with dead, live and impact (if any) loads. The section computed on this basis shall be not less than that required for the design dead, live and impact (if any) loads, computed without the 33 1/3% stress increase. The most severe distribution, concentration and combination of design loads and forces shall be taken into consideration, as specified in section Ind 53.14.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-76; am. Register, December, 1975, No. 249, eff. 1-1-76, renum. from 53.14, Register, December, 1977, No. 264, eff. 1-1-78.

*See Appendix A for further explanatory material.
PART II
FOUNDATIONS

Ind 53.20 General. All submittals for plan examination of new buildings or structures, and for the alteration of a permanent structure which requires changes in foundation loads and distribution, shall have the soil types and bearing capacities (indicating verified or presumptive) used in the design of footing and foundations shown on the plans. Sufficient records and data to establish the soil character, nature and load-bearing capacity shall be available to the department upon request.

History: Cr. Register, July, 1974, No. 228, eff. 1-1-76.

Ind 53.21 Soil bearing capacity. Bearing capacity of soils shall be determined by one of the following methods:

(1) VERIFIED. The soil shall be subjected to field or laboratory tests to determine its bearing capacity. A report, certified by a registered architect or registered professional engineer, shall be available to the department upon request.

(2) PRESumptive. (a) The type of soil under buildings shall be assigned a value not exceeding the bearing capacity, in pounds per square foot, as specified in Table 53-11. The type of soil shall be determined by explorations made at or adjacent to the site. The actual loading of the soil shall not exceed the specified bearing capacity unless verified by a written report (as explained in subsection (1) above).

<table>

(b) Where the bearing materials directly under a foundation overlie a stratum having smaller allowable bearing values, such smaller values shall not be exceeded at the level of such stratum.

History: Cr. Register, July, 1974, No. 228, eff. 1-1-76; am. (2) (h), Register, December, 1976, No. 222, eff. 1-1-77.

Ind 53.22 Unprepared fill material, organic material. No foundation of buildings or structures shall be placed upon unprepared fill material, organic soil, alluvial soil or mud unless evidence has been presented to the department showing that the proposed load will be adequately supported. This evidence shall be in the form of a written report.
and shall be based on soil analyses, load tests or other acceptable criteria.

**Note:** The decomposition of organic material in landfills used for the disposal of organic wastes may produce odorous, toxic and explosive concentrations of gas which may seep into buildings through storm sewers and similar underground utilities unless provisions are taken to release the gases to the atmosphere.

**History:** Cr. Register, July, 1974, No. 303, eff. 1-1-76.

**Ind 53.23 Frost penetration.** (1) Footings and foundations shall be placed below the frost penetration level, but in no case less than 42 inches below adjacent ground. Such footings shall not be placed over frozen material.

(2) Exceptions. (a) The edges of floating slabs constructed on grade need not be installed below the minimum frost penetration line provided adequate measures have been taken to prevent frost forces from damaging the structure.

(b) Grade beams need not be installed to the minimum frost penetration line, provided adequate measures are taken to prevent frost forces from damaging the structure.

**History:** Cr. Register, July, 1974, No. 303, eff. 1-1-76.

**Ind 53.24 Piling.** (1) **General requirement.** Pile foundations shall be designed and installed to adequately transfer the structure loads to underlying or adjacent soil bearing strata.

(2) **Installation.** Piles shall be handled and installed to the required penetration by methods which leave their strength unimpaired and that develop and retain the required load bearing capacity. Any damaged pile shall be satisfactorily repaired or the pile shall be rejected.

(3) **Allowable loads based on soil conditions.** (a) By driving formula. For individual pile design loads not exceeding 40 tons per pile, the safe working load may be determined by a recognized formula or by the following formula:

\[
P = \frac{2WH}{S+1}
\]

for drop hammer

\[
P = \frac{2E}{S+0.7}
\]

for double-acting hammer

in which:

- \(P\) = safe load (lbs.)
- \(W\) = weight of striking part of hammer (lbs.)
- \(H\) = fall of striking part of hammer (ft.)
- \(E\) = manufacturer's rated energy (ft. - lbs.)
- \(S\) = average penetration of pile under last 6 blows (inches/blow)

(b) **Substantiation of higher allowable loads.** Allowable loads greater than 40 tons will be permitted when substantiating data justifying such higher loads is submitted to the department by a foundation designer knowledgeable in the field of soil mechanics and pile foundations and familiar with the locale of the proposed project. Substantiating data
such as test borings, laboratory test results, soil profiles, and pile load tests may be required by the department. The load test shall be in accordance with the procedure outlined in ASTM D-1143 [Ind 51.25 (45)].

(c) Group pile action. When friction piles are placed in groups, consideration shall be given to the reduction of load per pile.

(d) Piles in subsiding areas. Where piles are driven through subsiding fills or other subsiding strata and derive support from underlying firmer material, consideration shall be given to the downward frictional forces which may be imposed on the piles by the subsiding upper strata.

(e) Lateral support. Water, air and fluid soils shall not be considered as offering lateral support to piles. In any other type of material the piles may be designed as a short column. Positive permanent lateral support shall be provided at or near the top of all piles.

(4) Allowable loads based on pile material strength. (a) The compressive stress in any cross-section of a pile shall not exceed the normal allowable compressive stress of the material used for the pile, except as given in Ind 53.24 (b). The piles may be designed as short columns except as stated in section Ind 53.24 (b) (c).

(b) End-bearing piles. For end-bearing piles more than 40 feet in length, it may be assumed that 75% of the load is carried by the tip, except for piles installed in a material referred to in section Ind 53.22.

(c) Friction piles. For friction piles, the full load shall be computed at the cross section located at two-thirds of the embedded length of the pile measured up from the tip.

(5) Type of piles. (a) Timber piles. Timber piles shall conform to National Design Specifications, Part X [Ind 51.27 (8)]. In addition, the tops of treated piles, at cutoff, shall be given 3 coats of hot croseote, followed by a coat of coal-tar pitch; and the cutoff shall be encased not less than 4 inches in concrete footing of the foundation.

(b) Precast concrete piles. Precast concrete piles shall be cast in one piece and shall attain a compressive strength of not less than 3,000 psi prior to driving. There shall be a minimum concrete covering of 2 inches over all reinforcing bars. Precast concrete piles shall be designed to resist stresses induced by handling, driving and superimposed loads.

(c) Cast-in-place concrete piles. All concrete for cast-in-place piles shall develop a compressive strength of not less than 3,000 psi. Reinforcement shall have a concrete cover of one inch in cased piles and 2 inches in uncased piles.

1. Uncased piles. Cast-in-place piles in contact with earth shall be limited in length to 30 times the average diameter of the pile. The allowable compressive stress in concrete shall not exceed 0.33 tef. The concrete shall be deposited in a shaft free of foreign matter in a continuous operation so as to insure a full sized pile without voids or segregation.

2. Metal formed piles. Cast-in-place piles in contact with a steel shell or casing shall have a minimum tip diameter of 8 inches and a minimum average diameter of 10 inches. The shell and casing shall be sufficiently
strong to resist collapse and sufficiently watertight to exclude water and foreign material during the placing of concrete. The shell or casing cannot be considered as a load carrying part of the pile. The allowable compressive stress in concrete shall be as stated for uncased piles, but it may be increased to a maximum value of 0.40 f'c if the following conditions are satisfied:

a. The thickness of casing is not less than 0.0747 inches (14 ga AISI).

b. The casing is seamless or is provided with seams of strength equal to that of the casing.

c. The pile diameter is not greater than 18 inches.

(d) Concrete-filled pipe and tapered tubular piles. Concrete-filled pipe and tapered tubular piles may be driven open-ended or closed-ended. Pipe or tapered tube piles driven with closed ends shall be treated as a cast-in-place concrete pile with metal casing and shall be governed by the same regulations applicable thereto with suitable load-bearing allowance made for the metal casing. When driven open-ended to rock, no concrete shall be deposited until the pipe is cleaned free of all soil or loose rock chips and satisfactory proof furnished of the condition of the rock. The allowable stress in steel is 35 Fy but shall not exceed 12,000 psi. The minimum wall thickness of all load-bearing pipe, tube and shells shall be 1/10 inch. When the soil surrounding the pile contains destructive chemical elements, the pile shall be provided with an approved protective jacket or coating which will not be rendered ineffective by driving.

(e) Structural steel piles. No section shall have a nominal thickness of metal less than 3/8 inch. When an H-shaped section is used, the flange projection shall not be more than 14 times the minimum thickness of metal. The steel stress shall not exceed 0.35 Fy.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.25 Settlement. Where footings or floating slabs are placed upon clay or other materials which are subject to settlement, an analysis for such buildings shall include consideration of total and differential settlements anticipated.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.26 Protection of adjoining property. (1) Any property owner (owner of an interest in land) making or causing an excavation to be made to a depth of 12 feet or less, below the grade, shall protect the excavation so that the soil of adjoining property will not cave in or settle, but shall not be liable for the expense of underpinning or extending the foundation of buildings on adjoining properties when the excavation is not in excess of 12 feet in depth. Before commencing the excavation the person making or causing the excavation to be made shall notify in writing the owners of adjoining buildings not less than 30 days before such excavation is to be made and that the adjoining buildings should be protected. The owners of the adjoining property shall be given access to the excavation for the purpose of protecting such adjoining buildings.

(a) Exception. The 30-day time limit for written notification may be waived if such waiver is signed by the owner(s) of adjoining properties.
(2) Property owners (owners of an interest in land) making or causing an excavation to be made exceeding 12 feet in depth below the grade shall protect the excavation so that the soil of adjoining property will not cave in or settle, and shall extend the foundation of any adjoining buildings below the depth of 12 feet below grade at their own expense. The owner(s) of the adjoining buildings shall extend the foundations of their buildings to a depth of 12 feet below grade at their own expense as provided in the preceding paragraph.

History: Cr. Register, February, 1976, No. 265, eff. 3-1-76.

Ind 53.27 Cut or fill slopes. (1) PERMANENT CUT OR FILL SLOPES. Cuts or fills adjacent to any building, structure or property line shall be so constructed or protected that they do not endanger life and/or property. Permanent cut slopes shall not be steeper than 1½ horizontal to one vertical and permanent fill slopes shall not be steeper than 2 horizontal to one vertical unless substantiating data justifying steeper slopes are submitted.

(2) TEMPORARY CUT OR FILL SLOPES. For temporary cuts and fills, refer to Wis. Adm. Codes chapter Ind 6—Trench, Excavation and Tunnel Construction, and chapter Ind 35 Safety in Construction.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.28 Pole foundations. Structures that use poles embedded in earth or embedded in concrete footings in the earth to resist axial and lateral loads shall have their depth of embedment determined as specified in this section.

(1) CONSTRUCTION BACKFILL REQUIREMENTS. The space around the pole shall be backfilled in accordance with one of the following methods:

(a) The hole shall be made 4 inches larger than the diameter or diagonal dimension of rectangular or square poles. It shall be backfilled with 2,000 psi concrete.

(b) The backfill shall be of thoroughly compacted clean sand.

(2) ALLOWABLE LATERAL SOIL PRESSURE. In the design of unrestrained and restrained poles, unless a more exact soil analysis method is used, the allowable passive soil pressure shall be determined in accordance with Table 53-III.

**Table 53-III**

<table>
<thead>
<tr>
<th>Soil Types (see Table 53-II)</th>
<th>Allowable Passive Soil Pressure (p) ( \text{psi per foot of depth below grade} )</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 and 2 ( \text{not well drained} )</td>
<td>100</td>
</tr>
<tr>
<td>2 ( \text{well drained} )</td>
<td>150</td>
</tr>
<tr>
<td>3 ( \text{well drained} )</td>
<td>200</td>
</tr>
<tr>
<td>4 ( \text{well drained} )</td>
<td>300</td>
</tr>
<tr>
<td>5 and 6 ( \text{well drained} )</td>
<td>400</td>
</tr>
</tbody>
</table>

\( S \) and \( S_p \) values shall not exceed 12 times the allowable passive soil pressure (p).

Values may be increased 32% for wind loads.

Where 1/4-inch horizontal movement of the pole at ground surface can be tolerated, the values shown in Table 53-III may be increased 100%, provided the individual poles are spaced a minimum distance of 6 times B center to center.

Register, December, 1976. No. 270

Building and heating, ventilating and air conditioning code
(3) **Design—Nonrestrained Poles.** The following formula shall be used in determining the depth of embedment required to resist lateral loads where no restraint is provided at the ground surface, unless other methods are approved by the department.

\[ d = \frac{A}{2} \left( 1 + \sqrt{1 + \frac{4.36 h}{A}} \right) \]

where:  
\( d \) = depth of embedment, ft.  
\( A = 2.34 P \)  
\( S_B \)  
\( P \) = applied horizontal force on pole, lb.  
\( S = \frac{pd}{3} \), see Table 53-III  

**Note:** For first approximation of "d", the following formula may be used:

\[ d = 3 \left( \frac{12 k_f P}{R} \right) \]

\( R \) = diameter of concrete casing, ft; when toenailed in concrete, diameter of diagonal dimension of square or rectangular pole, ft.  
\( h \) = height above the ground, in fact, at which the force "P" is applied. If the pole has fixity at the top, such as provided by a brace, the force "P" acts at the inflection point. The inflection point may be assumed at 1/4 of the distance from the ground to the knee brace for round poles, or 1/3 of the distance from the ground to the knee brace for square poles.  
\( p \) = allowable lateral passive soil pressure, psf.  

**Note 2:** When a frame analysis is used, \( h = M/P \), where \( M \) = bending moment on the pole at the ground surface.

(4) **Design—Restrained Poles.** Where restraint is provided at the ground surface, such as a rigid floor or pavement, the depth of embedment shall be in accordance with the following formula:

\[ d = \sqrt{\frac{4.25 h P}{N_B}} \]

where: \( S_B = \frac{pd}{3} \), see Table 53-III.

(5) **Moisture.** A preservative treatment shall be applied to poles subjected to moisture.

**Note:** The department will accept poles treated in accordance with the standards of the American Wood Preservers Association for preservative treatments.

**History:** Cr. Register, July, 1974, No. 223, eff. 1-1-75; am. (2) and (3), cr. (4), Register, December, 1976, No. 262, eff. 1-1-77; renum. (2), (3) and (4) to be (3) and (4) and (5), cr. (2), Register, December, 1977, No. 264, eff. 1-1-78.

**PART III**

**MASONRY**

**Ind 53.30 General.** (1) Scope. The requirements of Ind 53.30 through 53.36 herein shall apply to the design, construction and materials used in all masonry and similar work under this code.

(2) **Definition.** Masonry as used herein shall be considered as any built-up construction or combination of building units or materials of clay, shale, concrete, stone, gypsum, glass, metal or other approved units.

Register, December, 1978, No. 276

Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Structural

(3) Dimensions. Dimensions specified herein are nominal unless otherwise stated. The actual dimensions may vary from the nominal by the thickness of a mortar joint, but not more than one-half inch.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.31 Materials. (1) General requirements. Components used in the construction of masonry shall be as required in sections Ind 53.311 through Ind 53.316.

(2) Labeling. All packaged materials shall be clearly identified by name (portland cement, masonry cement, lime, gypsum, etc.) and applicable standards which are met.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.311 Masonry units. (1) General. (a) Solid and hollow units. A solid masonry unit is a unit whose net cross-sectional area in every plane parallel to the bearing surface is 75% or more of its gross cross-sectional area measured in the same plane. A hollow masonry unit has a net cross-sectional area less than 75% of its gross cross-sectional area.

(b) Quality. All masonry units shall be free from cracks, laminations and other defects or deficiencies, including admixtures and coatings, which may interfere with proper laying of the unit or impair the strength or permanence of the structure.

(c) Used masonry units. Masonry units may be reused when clean, whole and conforming to requirements for new masonry units.

(d) Marking requirements. Masonry units shall be of distinctive design or appearance, or marked so that the manufacturer is identified, as required by the department.

(e) Surface condition at time of use. Every masonry unit shall have all surfaces, to which mortar or grout is to be applied, capable of developing the required strength and bond. Coating or facings permitted and applied to masonry unit surfaces prior to their installation shall not supersede this requirement.

(f) Positioning in structure. Hollow masonry units shall be laid only in positions as tested for compliance.

(2) Clay and shale units. Clay and shale units shall be made of burned clay or shale or mixtures thereof with or without admixtures.

(a) Solid units (brick). Units shall conform to grade SW requirements of ASTM C-62 [Ind 51.25 (19)].

(b) Hollow units (tile and hollow brick).

1. Load-bearing units. Units for use in load-bearing and exterior walls shall conform to grade LBX requirements of ASTM C-84 [Ind 51.25 (11)], or grade SW requirements of ASTM C-652 [Ind 51.25 (41)].

2. Non-load-bearing units. Units for use in non-load-bearing partitions shall be specially marked and shall conform to the requirements of ASTM C-56 [Ind 51.25 (17)]. Such units may also be used for non-structural purposes in concrete floor construction.
3. Units for floor construction. Units for structural use in floor construction shall conform to grade FT 1 requirements of ASTM C-57 [Ind 51.25 (18)].

(3) Concrete units. Concrete units shall be made with portland cement, water and suitable mineral aggregates, with or without admixtures.

(a) Solid units. Small units (brick). Units shall conform to grade N requirements of ASTM C-55 [Ind 51.25 (16)].

2. Large units (solid block). Units shall conform to grade N requirements of ASTM C-145 [Ind 51.25 (30)].

(b) Hollow units (blocks). Units shall conform to grade N requirements of ASTM C-90 [Ind 51.25 (21)].

(4) Natural stone. All natural building stone for use in masonry shall be sound and free from loose or friable inclusions, and shall meet the strength and fire resistance requirements for the proposed use. Where the cleavage plane of stone units is pronounced, the stone shall be laid only on its natural bed. Stone exposed to soil, weather or frost action shall be such that the strength and structure of the stone will not be affected when so exposed.

(5) Cast stone. Units covered under this category are homogeneous or faced, dry cast concrete products other than conventional concrete masonry units (brick or block), but of similar size.

(a) Composition. Units shall be made with portland cement, water and suitable mineral aggregates, with or without admixtures, and reinforced if required.

(b) Standards. Units shall have a minimum compressive strength of 6500 psi and a maximum water absorption of 6% when tested as 2 x 2 inch cylinders or cubes.

(6) Architectural precast concrete. Units covered under this category are homogeneous or faced, wet cast non-load-bearing concrete products. Load-bearing precast concrete units shall conform to the requirements of Ind 53.40.

(a) Composition. Units shall be made with portland cement, water and suitable aggregates, with or without admixtures, and reinforced as required.

(b) Standards. Units shall conform to the requirements of Table 63-IV.
**DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS**

**Structural**

**TABLE 53-IV**

†Compressive strength shall be determined by procedures outlined in ASTM C 39 (Ind 81.25 (12)) or C 42 (Ind 61.25 (13)).

(7) **Gypsum units.** Units shall conform to the requirements of ASTM C-52 (Ind 51.25 (15)). Gypsum units shall not be used in exterior or load-bearing walls or locations exposed to frequent or continuous wetting.

(8) **Miscellaneous units.** See Ind 50.19 for all other potential masonry units.

**History:** Cr. Register, July, 1974, No. 223, eff. 1-1-75; am. (8). Register, December, 1978, No. 270, eff. 1-1-79.

**Ind 53.312 Mortar.** (1) **General.** Mortar as used herein shall be considered as a mixture containing cementitious materials used to permanently bond masonry or other structural elements.

(2) **Mortar for Unit Masonry.** (a) **Composition.** Conventional mortar shall be composed of cementitious materials, fine aggregates and water. Suitable admixtures are allowed.

(b) **Standards.** All materials used as ingredients in mortar when delivered to the mixer shall conform to the requirements outlined below:

2. Aggregates. Aggregates shall conform to the following requirements and to the requirements of ASTM C 144 (Ind 51.25 (29)).

   a. Aggregates shall be graded within the limits of Table 53-V.

b. The aggregate shall have not more than 50% retained between any 2 consecutive sieves of those listed in Table 53-V, nor more than 25% between the No. 50 and No. 100 sieves.

**Register, December, 1975, No. 278**

Building and heating, ventilating
and air conditioning code
c. If the fineness modulus varies by more than 0.20 from the value assumed in selecting proportions for the mortar, suitable adjustments shall be made in proportions to compensate for the change in grading.

4. Admixtures. Where metal ties, anchors or reinforcement are imbedded in masonry, chloride, nitrate and sulphate base salts or materials containing same shall not be used in masonry construction.

(c) Requirements. Mortar for masonry shall conform to the property requirements of Table 53-VI and to the requirements of ASTM C-270 [Ind 51.25 (34)] unless otherwise noted in this section. If approved laboratory testing is not conducted to indicate compliance with Table 53-VI, the mortar mix shall be restricted to the provisions of Table 53-VII.

(3) GYPSUM MORTAR. (a) Standards. Gypsum mortar shall be composed of one part of unfibered calcined neat gypsum to not more than 3 parts sand by weight, with sufficient water added for workability.

(b) Use restrictions. Gypsum mortar shall be used only with gypsum tile and block units or as fireproofing.

(4) MISCELLANEOUS MORTARS. (a) High bond mortars. See section Ind 50.19 for all such mortars, glues and special additives.

(b) Special use mortars. See Table 53-VIII.
(5) **Bond.** It is required that sufficient bond be developed to hold the masonry assemblage together and let it act as a single unit.

*Note:* Initial rate of absorption of masonry walls and quantity of entrained air in mortar are factors affecting bond strength.

(6) **Mortar use.** Masonry shall be laid in mortar of the types listed in Table 53-VIII.

**History:** Cr. Register, July, 1974, No. 228, eff. 1-1-75; am. (4) (a), Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 53.313 Masonry grout.** Masonry grout for non-engineered masonry shall be type M, S or N mortar, as used in the construction, to which water is added to produce a consistency for pouring without segregation.

*Note:* Masonry grout for reinforced masonry shall conform to the requirements of ASTM C 476 [Ind 51.25 (10)].

**History:** Cr. Register, July, 1974, No. 228, eff. 1-1-75.

**Ind 53.314 Cementitious materials.** (1) **Portland cement.** Portland cement shall conform to the requirements of ASTM C-150 [Ind 51.25 (31)].

(2) **Masonry cement.** Masonry cement shall conform to the requirements of ASTM C-91 [Ind 51.25 (22)].

(3) **Hydrated lime.** Hydrated lime shall conform to Type S requirements of ASTM C-207 [Ind 51.25 (33)].

(4) **Gypsum.** Gypsum shall conform to the requirements of ASTM C-22 [Ind 51.25 (9)].

**History:** Cr. Register, July, 1974, No. 233, eff. 1-1-76.

**Ind 53.315 Water.** Water shall be clean and free from injurious amounts of oil, acid, alkali, salt, organic matter and other deleterious substances.

**History:** Cr. Register, July, 1974, No. 229, eff. 1-1-75.
Ind 53.316 Reinforcing, ties and anchors. (1) Reinforcing bars. Reinforcing bars shall conform to the requirements of ASTM A-165 [Ind 51.25 (6)], A-616 [Ind 51.25 (7)], and A-617 [Ind 51.25 (8)].

(2) Continuous joint reinforcement. (a) Material. Ties shall be fabricated from the equivalent of cold drawn wire conforming to the requirements of ASTM A-82 [Ind 51.25 (3)].

(b) Coating. Ties in exterior walls and potentially wet areas shall have noncorrodible cross wires for the intended use. Conformance with Class 3 requirements of ASTM A-116 [Ind 51.25 (4)] is acceptable.

(c) Assembly. Ties shall consist of the equivalent of at least 2 No. 9 steel wire gage longitudinal wires or rods with No. 9 steel wire gage cross wires or rods spaced not over 16 inches apart along each longitudinal wire or rod electrically flush or butt welded to the outside wires or rods together and provide mechanical bond.

(d) Limitations. Ties shall be of such dimensions that they provide the following:

1. Overlap of at least 6 inches at splices.

2. Engagement of both adjacent wythes; out-to-out spacing of side rods to be approximately 2 inches less than the total wall thickness.

3. Minimum actual cover over all but the cross wires or rods of 5/8 inch clear from all masonry unit faces and their joint surfaces.

(3) Individual ties and anchors. (a) Material. Ties and anchors shall be fabricated from steel, brass, bronze or other approved material. See Ind 53.322 (5) (c) 1.b.

(b) Coating. Ties and anchors for use in exterior walls and potentially wet areas shall be noncorrodible for the intended use. Zinc coating (hot dip) conforming to the requirements of ASTM A-153 [Ind 51.25 (5)] is acceptable.

(c) Limitations. Ties and anchors shall be of such a dimension as to engage masonry units a minimum of 2 inches on each wythe in which the tie is placed and retain a minimum actual cover of 5/8 inch clear from all exposed masonry faces and joints.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.32 Design. (1) General requirements. Design of plain (non-reinforced) masonry shall be based either on the empirical method and limitations of section Ind 53.322 or on a detailed engineering analysis according to the provisions of section Ind 53.323. Design of reinforced masonry shall be based on the provisions of section Ind 53.323.

(2) Practice. All masonry shall be designed with adequate strength and proportions to support all intended superimposed loads, resist all vertical or horizontal loads as required by this code, and comply with the fire resistive construction requirements set forth in section Ind 51.04.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.
Ind 53.321 Types of masonry. (1) Veneer, furring and trim. Veneer, furring and trim comprise a facing of weather-resistant non-combustible materials securely attached to a backing, but not so bonded as to exert common action under load. See section Ind 53.36 for requirements.

(2) Panel wall. A panel wall is composed of weather resisting noncombustible large masonry units, or small masonry units prefabricated into larger assemblages, securely anchored to the framing of the structure.

(3) Single wythe wall. A single wythe wall is one masonry unit in thickness and is built of conventional size masonry units.

(4) Multi-wythe wall. A multi-wythe wall is composed of 2 or more wythes of conventional size masonry units of the same or different materials all tied or bonded together.

(a) Grouted wall. A grouted wall is a multi-wythe wall with all spaces between wythes solidly filled with masonry grout, as defined in section Ind 53.313.

(b) Slushed or parged wall. A slushed or parged wall is a multi-wythe wall with all spaces between wythes nominally filled with mortar.

(c) Hollow wall (includes conventional cavity wall). A hollow wall is a multi-wythe wall with an air space maintained between wythes. A water-repellent or water-resistant insulation may be placed between wythes. The description of a hollow wall is determined by its nominal out-to-out dimension.

(5) Special walls (a) Stack or chimney walls. See section Ind 64.46 and Table 53-VIII for general requirements.

(b) Special use walls. See section Ind 53.34 for special requirements.

History: Cr. Register, July, 1974, No. 222, eff. 7-1-74.

Ind 53.322 Empirical method of design. (1) Stresses. (a) General.

1. In determining the stresses in masonry, the effects of all loads and conditions of loading and the influence of all forces affecting the design and strength of the several parts shall be taken into account.

2. When the effects of eccentricity of vertical loads, including loads produced by the deflection of floor and roof units, are likely to cause tensile stresses in the masonry, the masonry shall be designed in accordance with the requirements of section Ind 53.323.

(b) Allowable stresses. 1. Compressive stresses. The compressive stresses in masonry shall not exceed the values given in Table 53-IX.

2. Bearing stresses. See Ind 53.34 (3) (b).

3. Composite masonry. In composite masonry with different kinds or grades of units or mortars, the maximum stress shall not exceed the allowable stress for the weakest combination of units and mortar of which the masonry is composed.

</tbody>
</table>

All allowable compressive stress values to be 20% less than those for equivalent types of single-wythe and grouted multi-wythe masonry.

Where a type of masonry unit, mortar or grout, is not provided for in Table 53-IX, it will be the practice of the department to use a maximum compressive stress in the masonry which is no more than 15% of the ultimate compressive strength of a masonry assemblage as determined by an approved test.

No individual masonry unit shall have a compressive strength less than 80% of the average ultimate compressive strength.

Stresses shall be calculated on actual dimensions rather than nominal dimensions, with consideration for reductions in net section areas and thickness.

Type O mortar is permitted only in certain non-load-bearing masonry. See Table 53 VIII.
4. Stone flexural members. The maximum allowable flexural stress for natural stone shall be 1/5 of its modulus of rupture.

5. Bolts and anchors. See Ind 53.34 (5).

(2) Thickness and height. (a) Height of masonry. The height of a wall is defined for purposes of limitation as the maximum vertical distance between structural members completely supporting the weight of the wall or between the upper such support and the top of the wall, whichever is greater.

(b) Thickness of load-bearing walls. The minimum thickness of load-bearing masonry walls shall be at least 12 inches for the upper 36 feet of their height, and shall be increased 4 inches for the lower 36 feet or fraction thereof. Where a masonry load-bearing wall is made up of 2 or more wythes, the thickness of the wall shall not include any wythe less than 4 inches thick.

(bm) Exceptions to thickness of load-bearing walls [Ind 53.322 (2) (b)]. (i) Stiffened walls. Where single wythe or grouted multi-wythe masonry load-bearing walls composed of units of the same material are laterally supported at distances not greater than 12 feet apart by masonry crosswalls or by reinforced concrete floors, they may be of 12-inch thickness for the whole 72 feet.

2. Top-story walls. Top-story walls may be of 8 inch thickness provided that they are not over 12 feet in height and the roof construction imparts no lateral thrust to the walls.

3. One-story walls. In one-story buildings not exceeding 9 feet in height, the walls may be of 6-inch thickness provided that the roof span does not exceed 18 feet.

4. Penthouses and roof structures. Masonry walls above the main roof level, 12 feet or less in height, enclosing stairways, machinery rooms, shafts or penthouses may be of 8-inch thickness, and may be considered as neither increasing the height nor requiring any increase in the thickness of the masonry below.

5. Walls of apartment buildings. In buildings defined as places of abode (Ind 57.001 (2) not including hospitals) not more than 3 stories in height, walls may be of 8-inch thickness when not over 36 feet in height and the roof imparts no horizontal thrust.

6. Walls below grade. Foundation walls shall be not less than 8 inches in thickness nor less than the thickness of the wall which it supports. When subject to lateral pressures, foundation walls shall be limited to a height over thickness (h/t) ratio of 9 and shall also have lateral support from vertical elements at a spacing required by Table 53-X.

7. Metal tied hollow walls. Hollow walls shall not exceed 36 feet in height. The space (cavity) between wythes shall be not more than 4 inches. The backing wythe shall be at least as thick as the facing wythe. When both the facing and backing wythes have a thickness of 4 inches, the height of such hollow walls shall not exceed 24 feet.

Notes: For definition of hollow walls, see Ind 53.322 (4) sec.
9. Rubble stone walls. All rubble stone walls shall be 4 inches thicker than required in (b) above, but in no case less than 16 inches in thickness. Other exceptions above do not apply to rubble stone walls.

(c) Thickness of exterior non-load-bearing walls and parapets. Non-load-bearing exterior masonry walls may be 4 inches less in thickness than required for load-bearing walls [including the exceptions under (bm)], but the thickness shall not be less than 8 inches except where 6-inch walls are specifically permitted.

(cm) Exceptions to thickness of exterior non-load-bearing walls and parapets (Ind 53.322 (2) (c)].

1. Panel walls. Panel walls shall be designed with sufficient strength and thickness and anchored to the structure so as to insure adequate support and resistance to wind or other lateral forces. Panel walls shall not be less than 2 inches in actual thickness and the maximum ratio of height to thickness shall not exceed 30.

2. Parapet walls. Parapet walls shall not exceed 3 times their thickness in clear height.

(d) Thickness of interior non-load-bearing walls (partitions). Non-load-bearing interior partitions shall be not less than 4 inches in thickness. Where partitions designed for lateral support at the top are not in tight contact with at least a 2-hour fire-resistive construction at the top, such partitions shall not be more than 24 times their thickness in clear height (see Ind 53.322 (3) (a) 3.).

(3) LATERAL SUPPORT. (a) Requirements. All masonry shall be laterally supported in conformance with the following:

1. Exterior walls. Exterior masonry walls, whether they be load-bearing or non-load-bearing, shall be laterally supported either horizontally or vertically at intervals not exceeding those indicated in Table 53-X.

<table>
<thead>
<tr>
<th>Type of Masonry</th>
<th>Mortar Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>M</td>
<td>S</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>Single wythe walls of solid units or grouted walls of solid units</td>
<td>22</td>
</tr>
<tr>
<td>Slushed or purged walls of solid units</td>
<td>20</td>
</tr>
<tr>
<td>Hollow wall or walls containing hollow units</td>
<td>16</td>
</tr>
</tbody>
</table>

In computing the ratio for hollow walls, the value for thickness shall be the sum of the nominal thickness of the inner and outer wythes.

2. Load-bearing interior walls. Load-bearing interior walls shall have lateral supports at either vertical or horizontal intervals not exceeding 24 times the wall thickness for solid masonry units and 20 times the wall thickness for hollow masonry units.
3. Non-load-bearing interior walls (partitions). Non-load-bearing partitions shall have lateral supports at either vertical or horizontal intervals not exceeding 70 times the thickness of the wall.

4. Special masonry walls. Exterior masonry walls having no lateral support at the top or at the ends (free standing), shall have their height limited to 4 times their thickness. (See Ind 53.322 (2) (c) 2. for parapet walls.) Similar interior walls (free standing), shall have their height limited to 6 times their thickness.

(b) Methods of lateral support. 1. General. Lateral support shall be provided by cross walls, pilasters or vertical structural members of sufficient strength to provide the required support when the limiting distance is measured horizontally; and/or by floors, roofs or horizontal structural elements which are of sufficient strength to provide the required support when the limiting distance is measured vertically. Provisions shall be made to transfer all lateral forces to the foundation.

2. Limitations. When horizontal structural elements are depended upon for lateral support, lateral support by vertical elements shall also be provided at intervals of not more than 72 times the wall thickness.

(c) Pilasters. A pilaster is a reinforced or nonreinforced masonry section which is thicker than and integrally bonded or mechanically keyed to the adjoining wall by alternate course bonding of masonry or by the use of pilaster blocks. A mechanically keyed control joint will be permitted on only one side of a pilaster which is used to provide lateral support. The projecting portion of the pilaster shall be bonded to the wall portion of the pilaster by lapping at least 50% of the units at the intersection or using special pilaster units.

1. All pilasters relied upon to provide lateral support shall not be less than 4 inches thicker than the wall supported nor less than 1/12 times the pilaster height. The width of pilasters shall be not less than 16 inches.

2. Where a pilaster is needed to carry a concentrated load from a flexural element, the least dimension shall be not less than 1/40 of the span of such an element and the height of the pilaster shall not exceed 12 times the least dimension of the pilaster. All voids, within and between masonry units, shall be fully grouted.

Notes: The intent of this rule is to permit the empirical method of design for masonry pilasters carrying concentrated loads provided the pilaster details eliminate the eccentricity and provided the actual stresses are less than or equal to the allowable stresses. Pilasters may also be designed through engineering analysis in accordance with section Ind 53.328.

(d) Piers. A pier is an isolated column of masonry. A load-bearing wall not bonded at the sides into associated masonry shall be considered a pier when its horizontal dimension measured at right angles to the thickness does not exceed 4 times its thickness.

1. All piers shall have lateral supports so that the vertical distance between such supports does not exceed 10 times their least dimension for single wythe or grouted masonry walls of solid masonry units, 8 times their least dimension for slushed or parged masonry walls of solid masonry units, and 6 times their least dimension for other masonry.
2. The least dimension of piers carrying flexural members shall be not less than \( \frac{1}{30} \) of the span of the flexural members.

3. Piers shall be laid in running bond unless reinforced as required for stock bond walls.

(4) Openings. Unless evidence is provided to show that openings do not cause lateral stability and stress requirements to be exceeded, the amount of openings in a masonry wall shall not exceed the limits set forth in Table 53-XI.

(5) Bonding. (a) General. All types of masonry shall be adequately bonded.

<table>
<thead>
<tr>
<th>Type of Masonry</th>
<th>Percent of Openings at any Horizontal Plane of Wall</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>20</td>
</tr>
<tr>
<td>Single wythe walls of solid units</td>
<td>20</td>
</tr>
<tr>
<td>or grouted walls of solid units...</td>
<td>18</td>
</tr>
<tr>
<td>All other masonry...</td>
<td></td>
</tr>
</tbody>
</table>

†The percentage of openings shall be calculated for each 100 linear feet of wall or portion thereof at any horizontal plane of wall. See Table 53-X for additional restrictions when type "N" or "O" mortar is used.

(b) Longitudinal bond. 1. Running bond. In each wythe of masonry, not less than 60% of the units in any transverse vertical plane shall lap the ends of units above and below a distance not less than 2 inches or \( \frac{3}{8} \) the height of the unit, whichever is greater. Masonry not lapped as required above will be considered as stack bond and shall be reinforced longitudinally as required in 2. below for masonry units laid in stack bond.

2. Stack bond. In each wythe of masonry with units laid in stack bond, the masonry shall be reinforced by a continuous tie assembly, as defined in Ind 53.316 (2), at vertical intervals not exceeding 16 inches. For interior non-load-bearing partitions this spacing may be increased to 24 inches. (For load-bearing walls, see also Ind 53.34 (3) (b) 4.)

3. Single wythe exterior concrete masonry walls. Where units are laid in running bond, such masonry wall shall be reinforced by a continuous tie assembly, as defined in Ind 53.316 (2), at vertical intervals not exceeding 24 inches. The requirement for tie assemblies is waived when the spacing of control joints is reduced to 80% of the values indicated in Table 53-XII, or if the spacing between control joints is 20 feet or less.

(c) Transverse bond. In multi-wythe masonry, adjacent wythes shall be bonded with either metal ties or headers in accordance with the following:

1. Bonding with metal ties. Adjacent wythes of masonry shall be bonded by embedment of reinforcement in the horizontal mortar joints with one of the following methods:
a. Continuous tie assemblies, as defined in Ind 53.316 (2), spaced at vertical intervals not exceeding 16 inches.

b. Individual ties, the equivalent of not less than 3/16 inch diameter steel rods, with one tie for not more than each 4 1/2 square feet of wall area. Ties in alternate courses shall be staggered. The maximum vertical distance shall not exceed 18 inches. The maximum horizontal distance shall not exceed 36 inches. Ties bent to rectangular shape shall be used with hollow masonry units. With solid masonry units, either rectangular ties or ties bent to 90 degree angles, Z shaped, to provide hooks not less than 2 inches long shall be used. In hollow walls, additional ties shall be provided at all openings, spaced not more than 3 feet apart around the perimeter and within 12 inches of the opening.

2. Bonding with masonry bond units (headers). a. Adjacent wythes of masonry shall be bonded by the equivalent of a full header course overlapping both wythes at least 3 inches and spaced at intervals not greater than every seventh course. The clear distance between bond courses shall not exceed 16 inches for solid units and 24 inches for hollow units. One-seventh of the wall surface shall be header or bond units.

b. In ashlar masonry, bond stones uniformly distributed shall be provided to the extent of not less than 10% of the area of exposed faces.

c. Rubble stone masonry shall have not less than one bond stone for each 6 square feet of wall surface on both sides. Such walls, 24 inches or less in thickness, shall have bond stones with a maximum spacing of 3 feet vertically and 3 feet horizontally.

d. Hollow walls shall not be bonded with headers.

Note: For definition of hollow walls, see Ind 53.321 (d) (e).

3. Interrupted bond. Where a structural member interrupts a backing wythe such that transverse bond otherwise required cannot be achieved, the facing wythe shall be bonded to that structural member as in 1 above.

(d) Bond at intersections and corners. Masonry that changes direction, or meets or intersects other masonry, where dependent for lateral support, shall be bonded by one of the following methods:

1. Walls laid separately. Provide joints with not less than the following:

a. For load-bearing elements, the equivalent of 1 1/4 inch by 1/2 inch anchors with ends turned up not less than 2 inches and not less than 24 inches between turned ends, embedded equally into each adjacent wall and spaced not more than 2 feet vertically. Where there is not sufficient thickness of masonry to embed such anchors properly, equivalent anchorage shall be provided by cross-pins or other means.

b. For non-load-bearing elements, the equivalent of 7/8 inch by 22 U.S. gage anchors, 8 inches or more in length, embedded equally into each adjacent wall and spaced not more than 16 inches vertically.

c. When regularly toothed or blocked, the vertical spacing of anchors required above may be doubled.
2. Walls laid simultaneously. Provide joints satisfying one of the following:

a. Lap at least 50% of the units at the intersection.

b. Use details which are designed to permit differential movement at the intersection of interior and exterior masonry, provided such details are consistent with the requirements for lateral stability of the masonry.

G) ANCHORAGE. (a) General. All masonry dependent upon structural elements for continuity or lateral support shall be securely anchored thereto in such a manner as to resist all forces, especially wind and all lateral forces acting either inward or outward.

(b) Load-bearing masonry. 1. Floor anchorage.

a. All types of concrete floor systems which bear continuously on masonry with concrete to masonry contact may be considered to provide adequate lateral support.

b. All other structural elements intended to provide lateral support shall be securely anchored to the masonry.

2. Roof anchorage. Roof structures shall be securely anchored to load-bearing masonry with the equivalent of at least 3/8-inch diameter bolts spaced not more than 6 feet on center and embedded in the masonry according to one of the following methods:

a. A steel plate having a minimum surface area of 6 square inches securely attached to the head of each bolt and completely embedded in the masonry at least 12 inches.

b. A continuous bond beam the equivalent of not less than 8-inch lintel (bond beam) blocks with 2 continuous No. 4 bars embedded in 2,500 psi concrete fill provided at the top of the masonry. The bolts shall be embedded at least 6 inches and hook beneath the longitudinal reinforcement.

c. Exterior non-load-bearing masonry. 1. Anchorage of masonry to the structural framework. Where masonry is dependent upon the structural framework for lateral support or transmission of lateral loads, the masonry shall be anchored to the framework on at least 2 opposite sides of the perimeter of the wall, with the equivalent of a one-inch wide by 3/4-inch thick anchor for each 18 square feet of wall surface, embedded at least 8 inches into the masonry, and spaced not more than 36 inches on center. Wedging will not be considered as an equivalent method.

2. Anchorage of panel walls suspended from the structural framework. Exterior prefabricated masonry assemblies and other elements, larger than conventional size masonry units shall be anchored to their weight supports with the equivalent of 3/4 inch minimum diameter stainless steel bolts or 3/4 inch minimum diameter corrosion resistant plated steel bolts.

d. Interior non-load-bearing masonry. Where masonry is dependent upon the structural framework for lateral support, such masonry shall be anchored with the equivalent of a flexible 3/16 inch diameter anchor for each 12 square feet of wall surface, embedded at least 4 inches.
into the masonry, and spaced not more than 48 inches on center. Wedging may be used to anchor the top of a masonry partition to its top horizontal support.

(7) Joints. Joints commensurate with lateral stability requirements shall be installed in all exterior masonry to allow for expected growth of clay products and shrinkage of concrete products.

(a) Vertical jointing. Vertical control joints shall be provided at a spacing in compliance with Table 53-XII.

**Table 53-XII**

**MAXIMUM SPACING OF EXTERIOR MASONRY CONTROL JOINTS BETWEEN UNRESTRAINED ENDS (FEET)**

</table>

Jointing required is a minimum and is not intended to prevent minor cracking. The distances given for maximum spacing of joints are for a single wall plane. For composite walls, the maximum spacing of joints shall be governed by the masonry material type used in the exterior walls.

**Note:** To accomplish the intended purpose, joints should be located at critical locations such as (but not limited to) changes in building heights, changes in framing systems, columns built into exterior walls, major wall openings and changes in materials.

(b) Horizontal jointing. Where supports such as shelf angles or plates are required to carry the weight of masonry above the foundation level [see Ind 53.322 (2) (a) and Ind 53.33 (4) (b)], a pressure-relieving joint shall be provided between the structural support and any masonry which occurs below this level. The joint width shall be such as to prevent any load being transmitted from the support to any element directly below. All mortar and rigid materials shall be kept out of this joint. This type of joint shall be provided at all such supports in a concrete frame structure where clay masonry is exposed to the weather.

**Ind 53.323 Engineered masonry.** (1) **Definition.** Engineered masonry means design of plain or reinforced masonry based on an engineering analysis.

(2) **Requirements.** Calculations or other substantiating data to justify a reduction in requirements shall be submitted for all items in conflict with sections Ind 53.322, 53.33 or 53.34.

**Note:** It will be the practice of the department to approve designs in conformance with the following: (1) clay and shale units—"Building Code Requirements for Engineered Brick Masonry." Structural Clay Products Institute (now known as Brick Institute of America), 1750 Old Meadow Road, McLean, Virginia 22101 (August 1989); (2) concrete units—"Specifications for the Design and Construction of Load-Bearing Concrete Masonry," National Concrete Masonry Association, P.O. Box 9185, Rosslyn Station, Arlington, Virginia 22209 (1976); (3) cast stone and architectural precast concrete units—"Design of Precast Concrete Wall Panels," Title No. 68-40, ACI Journal, July 1971 (also see section Ind 53.40); and (4) Register, December, 1976, No. 370

Building and heating, ventilating and air conditioning code
standards of accepted engineering practice, provided proposed materials are in successful similar use or proven by test to be adequate.

(3) LIMITATIONS. Where design by engineering analysis is based upon material of a higher grade or a superior workmanship than is generally provided in accepted practice, it must be clearly established to the satisfaction of the department by test or other evidence that such quality exists and will only be employed under special inspection or field testing.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.33 Construction. (1) COLD WEATHER WORK. Adequate cold weather construction and protection provisions shall be taken to prevent masonry from being damaged by freezing.

(2) WORKMANSHIP FOR LOAD-BEARING MASONRY. (a) The maximum thickness of a mortar joint shall be 3/8 inch.

(b) Except for head joints used for weep holes and ventilation, solid masonry units shall be laid so as to achieve full head and bed joints.

(c) Hollow masonry units shall be laid with full head joints and full bed joints under the full bearing areas of the face shells (and under webs where the adjacent cells are to be filled with grout).

(3) CLEANING. Chemical cleaning agents shall be prevented from harming the metal reinforcement of structural components.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75; r. (1) and renum., Register, December, 1974, No. 228, eff. 1-1-75.

Ind 53.34 Miscellaneous design-construction details. (1) SPECIAL USE WALLS. (a) Hollow walls. 1. In exterior hollow walls, suitable flashing shall be installed at the bottom of the cavity so as to drain any water outward.

2. Open vertical joints or weep holes of 3/4 inch minimum diameter shall be provided in the facing just above the flashing at a horizontal spacing not exceeding 3 feet.

(b) Parapet walls. 1. See Ind 51.02 (12) for requirements of parapet walls.

2. When roof drains are needed to remove precipitation and are the sole means of water escape, there shall be placed in all parapet walls scuppers or relief openings to prevent overloading of the roof.

(c) Retaining walls. The tops of exposed retaining walls shall be coped with noncombustible weatherproof material.

(d) Reuse of existing walls. Existing masonry may be used in the alteration or extension of a structure, provided that under the new conditions imposed it meets the requirements of this code or is made so by reasonable repairs.

and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 127

Structural

(2) **Changes in Thickness or Plane.** (a) **Nonvertical planes.** Details and techniques for all masonry to be installed in a nonvertical plane shall be submitted to the department for approval.

(b) **Thickness change requirements.** Where hollow walls or walls of hollow masonry units change in thickness, a course of solid masonry, concrete-filled hollow units or a continuous bearing element shall be interposed between the thicker and thinner sections.

(c) **Increase in thickness, including corbels.** The thickness of masonry shall not be increased (in the upward direction), except for corbels as follows:

1. The maximum horizontal projection of a corbel from the face of the wall from which it projects shall not exceed \( \frac{1}{2} \) the thickness of the wall.

2. The maximum projection of a masonry unit shall not exceed \( \frac{1}{2} \) the height of the unit nor \( \frac{1}{2} \) its bed depth.

(d) **Variation in thickness (chases and recesses).** Walls shall not be less than their required thickness between horizontal lateral supports except where permitted for chases and recesses as follows:

1. Chases or recesses shall not be made in load-bearing walls 3 inches or less in thickness. Pipes, ducts, conduits or similar noncombustible items may be installed in cores of hollow units.

2. Chases or recesses shall not be closer than 2 feet to any pilaster, buttress, cross wall, and wall or other stiffener that provides lateral support.

3. The maximum depth of any chase or recess shall not exceed \( \frac{1}{2} \) the thickness of the wall.

4. The length along the wall of any chase or recess shall not exceed 4 feet.

5. The clear distance between chases and recesses or each other shall not be less than 4 times the wall thickness.

6. Any chase or recess in conflict with the previous requirements shall be considered as an opening (see Ind 83.34 (3) (a) 4.).

7. No chase or recess shall reduce the thickness of material below the minimum required for fire walls, fire partitions or fire protective covering of structural members.

(e) **Protection.** In masonry exposed to the weather, pockets or crevices in which water may accumulate shall be avoided or protected to prevent damage.

(3) **Bearing.** (a) **Weight support of masonry.**

1. **General requirements.** The bearing support for all masonry shall be of noncombustible material and have lateral stability.

2. **Projections.** The projection of a wall beyond the edge of a supporting member other than masonry, such as a shelf angle or edge of a beam, shall not exceed \( 1\frac{1}{2} \) inches, unless at least \( \frac{3}{8} \) the mass of the wythe of masonry involved is located directly over the load-carrying member.

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
3. **Shelf angles.** See Ind 53.322 (7) (b).

4. **Openings.** The masonry above openings shall be adequately supported. The bearing length of structural elements which support the masonry above the opening shall be not less than 4 inches. The bearing stresses at these locations shall not exceed those allowed in Ind 53.322 (1).

   (b) **Bearing on masonry.** Bearing stresses in masonry shall not exceed those specified in Table 53-IX. Flexural members shall have bearing details that allow rotation at their supports without causing local failures.

   1. Concentrated loads. Beams, girders, trusses, joists and other members causing concentrated loads shall bear a minimum of 3 inches in length in the direction of span upon at least one of the following:

      a. Concrete beam. The equivalent of a nominally reinforced 2,500 psi concrete beam 8 inches in height.

      b. Solid masonry. At least 8 inches in height of masonry composed of solid masonry units with all voids and joints completely filled with mortar.

      c. Metal plate. A metal plate of sufficient thickness and size to safely distribute the load to masonry units. For piers and columns, the bearing plate shall not exceed 60% of the cross-sectional area of the pier or column and the resultant reaction of all vertical and horizontal loads shall fall within the middle third of the member.

      d. Bond beam. The bond beam shall be the equivalent of not less than 8-inch lintel (bond beam) blocks with 2 No. 4 bars embedded in 2,500 psi concrete fill. The loads shall bear on the concrete fill.

   2. Continuous loads. Joists, trusses and beams other than wood [for wood, see Ind 53.63 (4)], spaced 4 feet or less on center and 40 feet in span, slabs or other members causing continuous loads shall be transmitted to masonry with a minimum bearing length of 3 inches upon solid masonry at least 2½ inches in height, or as indicated for concentrated loads.

   3. Multi-wythe walls. Ties required for transverse bond shall be installed in the first horizontal mortar joint below the required beam, solid masonry or metal plate.

   4. Stack bond walls. Concentrated loads shall be distributed into masonry laid in stack bond by a concrete beam or bond beam (as defined in 1. above). For masonry of solid units, 2 additional rows of a continuous tie assembly [as defined in Ind 53.316 (2)] may be used instead of a concrete beam or bond beam.

   5. Support of wood floor members.

      a. Where a wood structural member is buried in masonry for support, it shall be firecut or a self releasing device shall be used.

      b. Where the end of a wood structural member is built into an exterior wall, a ½-inch air space shall be provided at the sides, top and end of such member.

†Bolts and anchors shall be solidly embedded in masonry or grout.

**History:** Cr. Register, July, 1974, No. 228, eff. 1-1-75; am. (1) (d), Register, December, 1974, No. 228, eff. 1-1-75; am. (3) (b) (intro.) and 1 b, Register, December, 1977, No. 281, eff. 1-1-78.

**Ind 53.35 Tests.**

(1) **GENERAL.** All masonry materials shall meet the requirements of section Ind 53.31, and the department may require submittal of test data, at any time, to show conformity.

(2) **SAMPLING AND TESTING.** The selection and construction of all test specimens shall conform to standard test procedures and shall be truly representative of the materials, workmanship and details to be normally applied in practice.

(3) **STANDARDS.** The testing of all masonry shall be in accordance with Table 53-XIV.

(4) **SPECIAL TESTS.**

(a) **Fire tests.** See section Ind 51.04.

(b) **Load tests.** Whenever there is reasonable doubt as to the stability or structural safety of a completed structure or part thereof, the department may require a load test on the building or portion of the structure in question.
and stability to adequately support the retractor. Provide shall be weather-resistant and shall provide sufficient strength.

(c) (4) LEARNING AND EXAMINATION SIMULATIONS (a) General, this section. The procedure, and learning and retractor shall:

\[ \text{AX} \]

(1) Learning: No materials used for retractor shall have a thickness

(2) Tie and test collar. Such shall not be less than 18 inches in area.

(3) For all materials of common retractor materials.

(4) Adequate strength of required thickness.

(5) Service shall not be assumed as supporting any load other than the

putting strength of required thickness.

(6) Adequate support may be considered as part of the retractor when

(b) Masonry veneer 1 1/4 inches or greater in thickness shall be supported by shelf angles or other equivalent weight supports. The spacing between such supports shall not exceed 18 feet vertically when the veneer is more than 30 feet above grade.

(5) ATTACHMENT. (a) General. All veneers, supports and attachments shall be capable of resisting a horizontal force equal to the wind loads specified in section Ind 53.12. Attachment shall be accomplished by mechanical methods or adhesion.

(b) Attachment by mechanical methods. All anchors shall be corrosion-resistant.

1. Veneer of conventional size masonry units (one square foot or less). Such veneer shall be securely attached to its backing by anchors the equivalent of 22 U.S. gage corrugated sheet steel 3/8 inch wide with at least one such tie located in every 2 square feet of wall.

2. Veneer of large size masonry units (greater than one square foot). Such veneer shall be securely attached with anchors the equivalent of not less than 3/8 inch diameter bolts in accordance with either of the following:

   a. Each unit individually anchored to the supporting framework with at least 3 anchors.

   b. Individual units dowelled to each other at all horizontal joints and anchored to the backing at all horizontal and vertical joints so that one anchor is provided for every 6 square feet of wall surface.

3. Veneer of metal. Exterior metal veneer shall be securely attached to its backing or supporting framework with the equivalent of wire of at least No. 9 steel wire gage spaced not more than 24 inches apart both horizontally and vertically. Wider spacing where proved adequate may be used when units exceed 4 square feet in area, provided there are at least 4 proper attachments per unit.
(c) **Attachment by adhesion.** Veneer one inch or less in thickness may be cemented to a masonry or concrete wall or to exterior portland cement plaster on high rib galvanized metal lath with an adhesive, provided that the bond is sufficient to withstand a shearing stress of 50 psi after curing for 28 days. Individual units so attached shall not exceed 30 inches in any one dimension nor have more than 540 square inches of face area.

(6) **Jointing.** Pressure-relieving joints commensurate with lateral stability requirements shall be provided both horizontally and vertically where needed to compensate for differential movement between veneer and backing or frame. See also Ind 53.322 (7).

(7) **Grounding.** Metal veneers fastened to supporting elements which are not a part of the grounded metal framing of a building shall be effectively grounded.

**History:** Cr. Register, July, 1974, No. 223, eff. 1-1-75.

**PART IV CONCRETE**

**Ind 53.40 Concrete requirements. (1) General.** The design and construction of structures in concrete of cast-in-place or precast construction, plain, reinforced or prestressed shall conform to the rules and principles of the following standards:

(a) **ACI Std. 318** [Ind 51.26 (1)], Building Code Requirements for Reinforced Concrete.

(b) **ACI Std. 512** [Ind 51.26 (2)], Recommended Practice for Manufactured Reinforced Concrete Floor and Roof Units.

(c) **ACI Std. 525** [Ind 51.26 (3)], Minimum Requirements for Thin Section Precast Concrete Construction.

**Note:** The following standards and recommendations (1) through (13) are recognized by the department as being good engineering practice: (1) "Commentary on Building Code Requirements for Reinforced Concrete," ACI Report 318; (2) "Recommended Practice for Selecting Proportions for Concrete," ACI Std. 211.1; (3) "Recommended Practice for Selecting Proportions for Structural Lightweight Concrete," ACI Std. 211.2; (4) "Recommended Practice for Hot Weather Concreting," ACI Std. 605; (5) "Recommended Practice for Cold Weather Concreting," ACI Std. 308; (6) "Manual of Standard Practice for Detailing Reinforced Concrete Structures," ACI Std. 318; (7) "Recommended Practice for Evaluation of Compression Test Results of Field Concrete," ACI Std. 214; (8) "Recommended Practice for Measuring, Mixing and Placing Concrete," ACI Std. 614; (9) "Recommended Practice for Concrete Formwork," ACI Std. 347; (10) "Specification for the Design and Construction of Reinforced Concrete Chimneys," ACI Std. 606; (11) "Suggested Design of Joints and Connections in Prestressed Structural Concrete," ACI Report 512; (12) "Guide for Cellular Concretes Above 50 pcf, and for Aggregate Concretes Above 60 pcf with Compressive Strengths Less than 2500 psi," ACI JOURNAL, February 1976 (Copies of above standards and recommendations may be obtained from American Concrete Institute, P.O. Box 19150, Redford Station, Detroit, Michigan 48219); (13) "Recommended Practices for Welding Reinforcing Steel, Metal Inserts and Connections in Reinforced Concrete Construction," AWS Std. 12.1 (American Welding Society, 2501 NW 7th St., Miami, Florida 33126).

**History:** Cr. Register, July, 1974, No. 223, eff. 1-1-75.

**Ind 53.41 Gypsum concrete requirements. (1) General.** The design and construction of gypsum concrete shall be in accordance with the following standards:

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 133

Structural

(a) ASTM C 317 [Ind 51.25 (35)], Standard Specifications for Gypsum Concrete.
(b) ANSI A 59.1 [Ind 51.27 (5)], Specifications for Reinforced Gypsum Concrete.

(2) LIMITATIONS. Gypsum concrete shall not be used where exposed directly to weather or where subject to wetting. Gypsum concrete shall be protected from freezing or coming in contact with moisture during shipment, storage, erection or pouring.

History: Cr. Register, July, 1974, No. 233, eff. 1-1-75.

Ind 53.42 Vermiculite concrete requirements. Vermiculite concrete, when used in roof systems and slabs-on-grade, shall be in accordance with: ANSI A 122.1 [Ind 51.27 (5)], "Specifications for Vermiculite Concrete Roofs and Slabs-on-Grade." Vermiculite concrete shall not be used where it can be subjected to moisture.

History: Cr. Register, July, 1974, No. 233, eff. 1-1-76.

PART V
METALS

Ind 53.50 Structural steel requirements. The design, fabrication and erection of structural steel for buildings and structures shall conform to: AISC [Ind 51.27 (2)], "Specification for Design, Fabrication and Erection of Structural Steel for Buildings," and the provisions of the accompanying commentary for this specification, with the following modifications:

(1) FABRICATOR SPLICES. Any shop or field connection or splice not specifically shown on the designer's drawings shall have been previously approved by the designer and a record shall be kept of this approval. This record shall be submitted to the department when requested.

(2) LATERAL BRACING MEMBERS. Individual bracing members providing lateral restraint to columns or to compression flanges of beams and girders or to compression chords of trusses shall be proportioned to resist at least 2 percent of the compression force at the brace location unless a suitable analysis is made to determine the appropriate strength and stiffness of the bracing member.

(3) CERTIFICATION AND IDENTIFICATION. (a) Certification. All structural steel shall have a mill certificate or a test report made in accordance with ASTM A-6 [Ind 51.25 (1)] from the steel supplier; the reports shall include the information on the minimum yield strength and chemistry of the steel furnished. Upon request by the department, the supplier or fabricator shall furnish certified mill reports, test reports, all-davits and/or other information about the steel for the specific project.

(b) Marking of steel. Steel used for main components in completed members or assemblies shall be marked. This marking shall be accomplished by color coding or other means of identification as to its type or grade prior to shipment from the mill. The marking shall be continued through the fabricator's plant to the construction site. Steel which conforms to ASTM A 36 [Ind 51.25 (2)] designation may be fabricated without marking.
(c) Acceptable steel types. Steel of structural quality shall conform to the standards specified in section 14.1.1 of the AISC [Ind 51.27 (2)]. Steel types not listed in the above mentioned section of the AISC may be used if approved by the designer. An approval letter indicating conformance with Ind 53.50 (3) (a) and (b) shall be sent to the department.

*Note: The type and grading may be indicated by the ASTM specification designation or a designation correlated to the information included on the certified mill or test report.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.51 Cold formed steel requirements. The design of cold-formed steel for buildings and structures shall conform to the AISI [Ind 51.27 (4)] "Specification for the Design of Cold-Formed Steel Structural Members," and the provisions of the accompanying commentary for this specification, with the following modifications:

(1) FABRICATOR SPICES. See Ind 53.50 (1)

(2) LATERAL BRACING MEMBERS. See Ind 53.50 (2).

(3) CERTIFICATION. See Ind 53.50 (3) (a).

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.52 Steel joist requirements. The design, fabrication and erection of steel joists shall conform to the "Standard Specifications for: Open Web Steel Joists, Longspan Steel Joists and Deep Longspan Steel Joists" adopted by the SJD [Ind 51.27 (5)].

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.53 Structural welding of steel. The requirements of this section shall apply to all welds on or between materials within the scope of Ind 53.50, Ind 53.51 and Ind 53.52.

(1) BASE METALS. Steels to be welded under this code are listed in AWS D 1.1, sections 8.2 and 10.2 [Ind 51.27 (6)].

(2) FILLER METALS. Filler metal requirements that are acceptable under this code are listed AWS D 1.1 section 4.1 [Ind 51.27 (6)].

(3) WELDING PROCESSES. (a) Manual shielded metal arc, submerged arc, gas metal arc and flux cored arc welding processes conforming with the procedures established in AWS D 1.1, sections 2, 3 or 4 [Ind 51.27 (6)] shall be considered as prequalified and are approved for use without performing procedure qualification tests.

(b) Electroslag and electrogas welding processes will not be considered as prequalified. They may be used provided a procedure is developed and provided it conforms to the applicable provisions of AWS D 1.1, sections 2, 3 or 4 [Ind 51.27 (6)].

(4) WELDING PROCEDURES. (a) Procedure specification. All welding procedures shall be prepared as a written procedure specification. This written procedure specification shall be prepared by the manufacturer, fabricator or contractor and shall be made available or submitted to the department when requested.

(b) Procedure qualification. All joint welding procedures shall be previously qualified by tests as prescribed in AWS D 1.1 section 5.6 [Ind
51.27 (6), except for the prequalified procedures exempted in Ind 53.53 (3) (a). The test shall be conducted under the supervision of an approved testing laboratory and the test results shall be submitted to the department for approval.

(5) **DESIGN OF WELDED CONNECTIONS AND JOINTS.** The details of all joints shall comply with the requirements of AWS D 1.1, section 2 and section 10, parts III and IV [Ind 51.27 (6)]. A joint form not specified in AWS D 1.1, section 2 and section 10, parts III and IV, shall not be used until it is qualified to the satisfaction of the department.

(a) **Stud welding.** Stud welding shall be done by a procedure qualified in accordance with the requirements of AWS D 1.1, section 4, part VI [Ind 51.27 (6)].

(6) **OPERATOR QUALIFICATIONS.** All structural welding work shall be done by certified [as defined in Ind 53.53 (7)] welders. The required qualification test shall be conducted under the supervision of an approved testing laboratory. The weld test report shall be submitted to the department for evaluation. Test specimens shall be submitted when requested by the department.

(a) The manual welders shall be tested and qualified in accordance with AWS D 1.1, section 5, part III [Ind 51.27 (6)].

(b) The manual tackers shall be tested and qualified in accordance with AWS D 1.1, section 5, part V [Ind 51.27 (6)].

(c) The welding machine operator shall be tested and qualified in accordance with AWS D 1.1, section 5, part IV [Ind 51.27 (6)].

(7) **OPERATOR CERTIFICATION.** The department will issue to the welder or welding machine operator who has successfully passed the prescribed qualification tests, a certificate bearing his name, social security number, identifying mark, the process, the procedure specification number and other pertinent information from his qualification test. This certificate will remain in effect for 3 years provided the operator is continuously engaged in welding operations without an interruption of more than 3 consecutive months. If the interruption exceeds 3 consecutive months, the certificate shall automatically become void.

(a) Each manual welder and tacker or welding machine operator shall be retested every 3 years in accordance with Ind 53.53 (6).

(b) Each manual welder and tacker or welding machine operator certificate which has become void due to welding operation interruption exceeding 3 consecutive months or having exceeded the 3-year certificate time limit can be renewed only by retesting at an approved testing laboratory.

(8) **WELD IDENTIFICATION.** Each structurally significant member shall have its welding identified by a distinguishing mark stamped on the member by the certified welders involved.

(9) **CRITERION OF FINAL ACCEPTANCE.** All structural welding is subject to examination by approved inspectors and such inspection shall be the final criterion for conformance and acceptability for the intended use.
(10) Structural welding done outside the state of Wisconsin. All welding shall conform with the requirements of section Ind 53.53 except the requirements of (7). In lieu of operator certification, manufacturers and suppliers of structural steel shall, prior to commencing any welded construction, submit evidence of procedure qualification, if not pre-qualified, and welder certification that has been approved by an independent testing laboratory which is acceptable to the department. Manufacturers and suppliers are required to keep the welder certification current.

Note: The welder certification requirement may be submitted and kept current by having the approved testing laboratory submit a list of certified welders to the department. The submitted may be a part of the materials approval information submitted for section Ind 50.19 or may be submitted separately for the manufacturers not having a materials approval.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75; am. (10), Register, December, 1977, No. 264, eff. 1-1-78.

Ind 53.54 Aluminum framing requirements. The design, fabrication and erection of aluminum structural framing members shall conform to "Specifications for Aluminum Structures," [Ind 51.27 (1)], published by The Aluminum Association.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.55 Stainless steel requirements. The design, fabrication and erection of light gage stainless steel framing members shall conform to AISI [Ind 51.27 (4)], "Specification for the Design of Light Gage, Cold-Formed Stainless Steel Structural Members."

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75.

Ind 53.56 Other metals. The design, fabrication and erection of other metals or metal alloys not specifically listed in this section shall be in accordance with the provisions of section Ind 50.18.

History: Cr. Register, July, 1974, No. 223, eff. 1-1-75; am. Register, December, 1976, No. 262, eff. 1-1-77.

PART VI
WOOD AND WOOD FIBER PRODUCTS

Ind 53.60 General. (1) Scope. The requirements of sections Ind 53.60 to 53.63, inclusive, shall apply to the materials, design, and construction procedures used in all wood and wood fiber products construction work under this code.

(2) Definition. Wood and wood fiber products include those structural elements derived from solid wood, structural glued-laminated timber, plywood, fiberboard, hardboard and other wood-fiber-based materials.

History: Cr. Register, July 1974, No. 223, eff. 1-1-75.

Ind 53.61 Materials and design of structural elements. (1) Sawn lumber. The material characteristics and the design provisions of load-bearing structural sawn lumber shall be in accordance with the following adopted standard and listed exceptions:

(a) "National Design Specification for Wood Construction" [Ind 51.27 (8)] and its supplement.

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code.
1. Exceptions:

a. Section 4.1.7. The provisions of this section shall also apply to re-used lumber. Reused lumber shall be considered to have a duration of load factor of 0.90.

b. Section 4.2.2. In addition to requiring grading in accordance with ASTM D 245 [Ind 51.25 (43)], lumber (including reused lumber) of species and grades not listed in the supplement to the NDS [Ind 51.27 (8)] shall be identified by the grade mark of, or certificate of inspection issued by, a lumber grading or inspection bureau or agency recognized as being competent.

c. Section 2.2.5.3. The cumulative effects of short-time loads, such as snow, shall be considered in determining duration of load. For snow load, no greater duration of load factor than 1.05 shall be used.

2. Structural Glued-Laminated Timber. Structural glued-laminated timber is an engineered, stress-rated product of a timber laminating plant comprising assemblies of specially selected and prepared wood laminations securely bonded together with adhesives. The grain of all laminations is approximately parallel longitudinally. The following standards are adopted as part of this building code for the design and production of structural glued-laminated timber, except that the modification of design stresses for duration of load shall be as specified in Ind 53.61 (1) (a) i.e.

(a) AITC 117 [Ind 51.27 (3)], "Standard Specifications for Structural Glued-Laminated Timber of Douglas Fir, Western Larch, Southern Pine and California Redwood."

(b) AITC 119 [Ind 51.27 (3)], "Standard Specifications for Hardwood Glued-Laminated Timber."

(c) AITC 120 [Ind 51.27 (3)], "Standard Specifications for Structural Glued-Laminated Timber Using 'E' Rated and Visually Graded Lumber of Douglas Fir, Southern Pine, Hem Fir and Lodgepole Pine."

3. Round Poles. Allowable unit stresses for nongraded round poles used as structural members other than piling shall be 80% of the allowable unit stresses for select structural grade beams and stringers (19% moisture content) of the appropriate species as listed in the supplement to the National Design Specification for Wood Construction [Ind 51.27 (8)]. No obviously unsound load-bearing poles are to be used. Higher allowable stresses will be permitted for round poles graded in accordance with a recognized standard.

Note: ASTM designation D 3200-73 "Standard Specification and Methods for Establishing Recommended Design Stresses for Round Timber Construction Poles" is acceptable for graded round poles. ANSI Standard 05.1-1872 may be used for poles subject to transverse loads only.

5. Plywood. (a) General. The quality and design of all plywood used in construction of all buildings and structures shall conform to the minimum standards under this section. All plywood when used structurally, including among others, use for siding, roof and wall sheathing, subflooring, diaphragms, and built-up members, shall conform to the
performance standards for its type in U.S. Product Standard PS 1 [Ind 51.27 (11)] for softwood plywood/construction and industrial. Each panel or member shall be identified for grade and glue type by the trademarks of an approved testing and grading agency. In addition, all plywood when permanently exposed in outdoor applications shall be of exterior type.

Note: It will be the policy of the department to approve designs in conformance with the following: (1) "Plywood Design Specification" including Supplement No. 1 "Design of Plywood Curved Panels"; Supplement No. 2 "Design of Plywood Beams"; Supplement No. 3, "Design of Flat Plywood Strengthen-Skin Panel"; and Supplement No. 4 "Design of Flat Plywood Sandwich Panels"; (2) "Plywood Diaphragm Construction"; (3) Laboratory Report 121, "Plywood Panel Plate Design and Details"; (4) Laboratory Report 87, "Load-Bearing Plywood Sandwich Panels"; and (5) "Fabrication Specifications Plywood-Joister Components: GP-8, BH-8, SS 8, SP 81, FP-82, PW-61" (above publications available from the American Plywood Association, 1119 A Street, Tacoma, Washington 98401); (6) Design Guide HFP-SG-71, "Structural Design Guide for Hardwood Plywood" (available from the Hardwood Plywood Manufacturers Association, 2310 South Walter Reed Drive, Arlington, Virginia 22206).

Note 2: The department will accept plywood treated in accordance with the standards of the American Wood Preservers Association.

(b) No part of any of the above referenced standards shall supersede the general live load requirements of section Ind 53.11.

(6) RECONSTITUTED WOOD BASE-FIBER AND PARTICLE PANEL MATERIALS. Materials of this type, when used structurally, shall be approved by the department in accordance with the requirements of section Ind 50.12. Evaluation will be based on ASTM D 1037 [Ind 51.25 (44)].

(7) SOLID WOOD FLOOR AND ROOF SHEATHING. Minimum thickness of nonstress rated lumber used for floor and roof sheathing shall be in accordance with Table 53-XVI.

†The above grades are taken from grading rules approved by the American Lumber Standards Committee.

(8) **Timber Fasteners.** The design and use of timber fasteners shall be in accordance with the requirements of National Design Specification for Wood Construction [Ind 51.27 (8)].

(9) **Wood Foundations and Walls Below Grade.** (a) **Design.** The design of wood foundations and walls below grade shall be in accordance with the following adopted standard and listed exceptions: “All-Weather Wood Foundation System, Basic Requirements,” Technical Report No. 7 [Ind 51.27 (8)].

1. Exceptions:

   a. Section 3.3.1. Fasteners for use in preservative treated wood shall meet the requirements of this article. Fasteners of silicon bronze or copper or stainless steel types 304 or 316, as defined by the American Iron and Steel Institute classification, shall be permitted in preservative treated wood above or below grade. Fasteners or fastener materials not otherwise permitted under this article shall be permitted if adequate comparative tests for durability, including the effects associated with wood treating chemicals, demonstrate performance equal to or greater than the specified fasteners or fastener materials.

   b. Section 6.7. Six-mil thick polyethylene sheathing shall be applied over the below-grade portion of exterior basement walls prior to backfilling. Joints in the polyethylene sheathing shall be lapped 6 inches and bonded. The top edge of the polyethylene sheathing shall be bonded to the plywood sheathing. A treated lumber or plywood strip shall be attached to the wall to cover the top edge of the polyethylene sheathing. The wood strip shall extend several inches above and below finish grade level, as required to protect the polyethylene from exposure to light and from mechanical damage at or near grade. The joint between the strip and the wall shall be caulked full length prior to fastening the strip to the wall. Alternatively, asbestos-cement board, brick, stucco or other covering appropriate to the architectural treatment may be used in place of the wood strip. The polyethylene sheathing shall extend down to the bottom of the wood footing plate but shall not overlap or extend into the gravel footing.

(b) **Materials.** All lumber and plywood shall be treated in accordance with the following adopted standard and shall be identified as to conformance with such standard by an approved inspection agency.
1. "Quality Control Program for Soft-Wood Lumber, Timber and Plywood Pressure Treated with Water-Borne Preservatives for Ground Contact Use in Residential and Light Commercial Foundations" [Ind 51.27 (6a)].

Ind 53.62 Special systems. (1) WOOD TRUSSES. Wood trusses shall be constructed in accordance with the following recommended standard and the listed exceptions:

(a) "Design Specification for Metal Plate Connected Wood Trusses" [Ind 51.27 (10)].

1. Exceptions and additions:

a. Section 302.2. Bending moments used in the design of top chord members shall be based on the assumption of no fixity at member ends or joints due to plate connectors.

b. Metal plate connectors shall be identifiable as stated in Ind 53.61 (8) (a).

c. The modification of design stresses for duration of load shall be as specified in Ind 53.61 (1) (a) 1. c.

(b) For trusses with nail-glued plywood gusset plates, calculations and design reference source shall be submitted to the department.

(c) Mechanically fastened trusses shall conform to section 8.4, "Timber Connector Joints," of National Design Specification [Ind 51.27 (8)].

Ind 53.63 Minimum construction requirements. The requirements of this section shall apply to all wood framing.

Note: Recognized wood framing and construction details indicated in "Wood Construction Data No. 1 and No. 5" of the National Forest Products Association, Technical Services Division (1619 Massachusetts Ave. NW, Washington, D.C. 20036) is recommended as good design and construction practice.

(1) FIRE STOPS. Fire stops shall be provided at all intersections of interior and exterior walls with floors, ceilings and roof in such manner as to effectively cut off communication by fire through hollow concealed spaces and prevent both vertical and horizontal drafts.

(a) Furred walls shall have fire stops placed immediately above and below the junction of any floor construction with the walls, or shall be fire stopped the full depth of the joist.

(b) All spaces between chimney and wood framing shall be solidly filled with noncombustible material at floor levels.

(c) All wood fire stops as required in this section shall be lumber not less than 2 inches in nominal thickness, or 3/4-inch thick plywood with joints backed, and not less in width than the enclosed space within the
partition except as provided for chimneys. Fire stops may also be of gypsum board, cement asbestos board, mineral wool or other approved noncombustible materials, securely fastened in place.

(2) **Wood Framing into Fire-Rated Masonry Walls.** See Ind 51.045 (1) (m).

(3) **Fire-cutting.** Wood members supported in masonry walls shall have the ends of such members splayed or firecut to allow free end rotation in the vertical plane of the member, out of the masonry wall. See also Ind 53.34 (3) (b) 5.b.

(4) **Bearing.** (a) **Joints and trusses.** The ends of each joist or truss shall have not less than 1 1/2-inch length of bearing on wood or metal nor less than 3-inch length on hollow or solid masonry units.

(b) **Beams and girders.** The ends of beams or girders supported on masonry or concrete shall have not less than 4-inch length of bearing. See also Ind 53.34 (3).

(5) **Notching and Drilling.** No notching of outer fibers of structural members is permitted unless substantiated by design calculations. Circular holes bored in joints and studs that are within the middle one-third of the depth of joist or studs are permitted without design calculations.

(6) **Decay Prevention.** Where wood is used in parts of a building exposed to moisture that causes the moisture content of wood to exceed 19%, the wood shall be adequately ventilated or treated with preservative.

**Note:** The department will accept wood products treated in accordance with the standards of the American Wood Preservers Association and the American Wood Preservers Bureau.

(a) All wood columns, posts and frame logs whose base is subject to deterioration due to moisture shall bear on concrete or other inorganic materials which extend at least 3 inches above the adjacent surface unless treated with preservative.

(b) The ends of wood structural members built into exterior masonry walls or into concrete shall be treated with preservative or a moisture-proof barrier shall be installed on the bearing surface.

**Note:** In areas subject to termite attack, refer to “Design of Wood Structures for Permanence” (published by the National Forest Products Association, 1019 Massachusetts Ave. NW, Washington, D.C. 20036) as suggested by National Design Specifications [Ind 51.27 (8) 1. Appendix F, section B.2.

(7) **Truss Bracing and Anchorage.** All wood trusses shall be securely fastened to the supports and each truss shall be secured in position in accordance with National Design Specification [Ind 51.27 (8)]. Appendix A, section A.10.

(8) **Anchorage.** Anchorage shall be in accordance with subsection Ind 53.12 (2).

(9) **Cross Bridging.** Cross bridging shall be furnished in accordance with section 4.4.1 of NDS [Ind 51.27 (8)]. When joists support floor or roof decks other than wood or wood decks which are not adequately attached, cross bridging shall be provided at 8-foot intervals.
(10) SOLID BLOCKING. All floor and roof joists shall be supported laterally at the ends and at each support by solid blocking except when the ends of joists are nailed to a header, band or rim joist or to an adjoining stud. Solid blocking shall be provided between floor joints where subjected to concentrated loads. Solid blocking shall be not less than 2 inches in nominal thickness and the full depth of the joist.

(11) JOIST SUPPORT. Floor or roof joists shall not be too nailed into the side of beams and girders for support. Such joists shall be supported by joist hangers, ledgers or metal plate connectors of adequate structural capacity.

(12) STUD WALLS. Unless evidence is provided to indicate otherwise, the maximum spacing and height of studs shall be in accordance with Table 53-XVIII. Notching and drilling of studs shall conform to subsection Ind 53.63 (5). Where load-bearing studs are spaced at 24-inch intervals, the roof trusses, rafters, and joists shall be centered over the studs or, in lieu thereof, solid blocking equal in size to the studs shall be installed to reinforce the double plate above.

(13) MINIMUM RECOMMENDED NAILING SCHEDULE. Unless evidence of design for the connection is provided, the connection shall have a minimum nailing in accordance with Table 53-XIX or its equivalent.

**History:** Cr. Register, July, 1974, No. 222, eff. 1-1-75; am. (6) intra., Register, December, 1976, No. 252, eff. 1-1-77; am. (7) and (8), Register, February, 1978, No. 278, eff. 3-1-79.

**Ind 53.64 Wood foundations.** Foundations for 2-story buildings of type 7 and 8 construction may be constructed of treated wood when the design is based upon the soil bearing values contained in section Ind 53.21 and the structural design is in accordance with the standards listed in section Ind 53.61. All pressure-treated wood and plywood shall be treated and identified in accordance with adopted standards of the American Wood Preservers Bureau [Ind 51.27 (6a)].

**Note:** Section Ind 51.02 (4) (b) 2. b. states that exterior walls below the first floor structural system be counted in a story when constructed of materials other than masonry or concrete. Therefore, buildings utilizing wood foundations will be limited to 2 levels (one-story and basement, one story and ground floor, or 2-story with wood load wall).

**History:** Cr. Register, December, 1978, No. 276, eff. 1-1-79.
Chapter Ind 54

FACTORIES, OFFICE AND MERCANTILE BUILDINGS

Ind 54.001 Scope (p. 145)
Ind 54.01 Construction, height and allowable area (p. 145)
Ind 54.02 Number and location of exits (p. 147)
Ind 54.03 Type of exits (p. 148)
Ind 54.04 Required exit width (p. 149)
Ind 54.06 Capacity of buildings (p. 149)
Ind 54.08 Entrance of stairways and shafts (p. 150)
Ind 54.10 Trap doors and floor openings (p. 150)
Ind 54.11 Lighting (p. 150)
Ind 54.12 Sanitary facilities (p. 151)
Ind 54.13 Change rooms and lunchrooms (p. 156)

Ind 54.13 Isolation of hazards (p. 155)
Ind 54.16 Stairtypes (p. 155)
Ind 54.16 Automatic sprinklers (p. 156)
Ind 54.17 Fire alarms (p. 156)
Ind 54.18 Floor level signs (p. 156)
Ind 54.19 Signs indicating number of persons (p. 156)
Ind 54.20 No smoking signs (p. 156)
Ind 54.21 Tests (p. 157)
Ind 54.22 Mini-warehouses and mini-garages (p. 157)
Ind 54.50 Garages (p. 157)
Ind 54.51 Filling stations; buildings and structures (p. 161)
Ind 54.52 Automobile tire or battery shops (p. 161)

Ind 54.001 Scope. This classification includes all factories and workshops (including all places where manual labor is employed), office buildings, telegraph and telephone offices, mercantile establishments where commodities are bought or sold, taverns, warehouses, railroad stations, exhibition buildings, and places where not more than 100 persons assemble for recreation, entertainment, worship, or dining purposes.

Ind 54.01 Construction, height and allowable area. (1) Buildings in this classification shall be of the type of construction and shall not exceed the number of stories as specified in this section. The floor area of any such building shall not exceed the permitted for the corresponding type of construction and number of stories shown in table 54.01.

Note: See section Ind 51.03 for standards of classes of construction.

(2) ALLOWABLE INCREASE OF FLOOR AREAS. (a) When the entire building is protected by an approved automatic sprinkler system, the areas in Table 54.01 may be increased by 150% for one-story buildings and 75% for buildings of more than one story. (See example below.)

Note 1: See section Ind 51.23 for approved automatic sprinkler system.

Note 2: Example

<table>
<thead>
<tr>
<th></th>
<th>(from table 54.01)</th>
<th>(if sprinklered)</th>
<th>(total allowable)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. One story</td>
<td>10,000 sq. ft.</td>
<td>(1.5 X 10,000) = 25,000 sq. ft.</td>

<tr>
<td>2. Two or more stories</td>
<td>10,000 sq. ft.</td>
<td>(1.75 X 10,000) = 17,500 sq. ft.</td>
<td></td>
</tr>
</tbody>
</table>

(b) There shall be no area restriction in one-story buildings satisfying one of the following conditions:

1. Construction meets the requirements for Type No. 3 or Type No. 4 and is protected by an approved automatic sprinkler system.

2. Construction meets the requirements for Type No. 5 or 6 of totally noncombustible construction and is protected by an approved automatic sprinkler system.

</tbody>
</table>

**Note:** N.P. means "not permitted."
a. Exception. Nonbearing partitions may be of fire-retardant treated wood or combustible one-hour rated materials. Openings need not be protected by rated fire door or rated fire window assemblies.

3. Construction of floors, walls, roof and structural framing is of noncombustible material and the contents of building are noncombustible.

(2) (c) Buildings with no area limitations shall have a continuous all-weather, hard-surfaced area 30 feet or more in width for a distance of not less than 50% of the perimeter of the building. These buildings shall have at least one wall facing a street for its entire length. At least 2 of the remaining building walls shall face streets for at least 50% of their respective lengths.

(3) No building shall be limited in area when divided into sections which do not exceed the maximum areas tabulated in this section by fire division walls. Such fire division walls shall be as specified in section Ind 51.02 (13). All openings in such walls shall be protected by fire-resistant doors as specified in section Ind 51.047. Such doors may normally remain open if held in that position by fusible links.

(4) Street location. Streets shall be within 50 feet of the adjacent building side with no obstructions between the street and the building which will impede fire-fighting efforts. (See section Ind 51.01 (1.24) for definition of street.)

History: 1-2-56; am. (2) and (3), Register, September, 1959, No. 4h, eff. 10-1-58; am. (3), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (3), eff. 8-1-74 and exp. 1-1-72; cr. (3) eff. 1-1-72, Register, July, 1971, No. 187; r. and recr. (1) and (2), Register, June, 1972, No. 198, eff. 1-1-73; r. and recr. (2) and (3), Register, September, 1973, No. 213, eff. 10-1-73; cr. (2) (a) 2 a, Register, December, 1977, No. 254, eff. 1-1-78; am. (2) (b) 2 a and (9) (c), cr. (4), Register, November, 1978, No. 276, eff. 1-1-79.

Ind 54.42 Number and location of exits. (1) NUMBER OF EXITS. Every building and every floor level thereof shall have at least 2 exits.

(2) EXCEPTIONS. One exit will be permitted in the following conditions:

(a) Floor levels used entirely for storage in buildings 2 stories or less in height and not over 3,000 square feet gross area per floor.

(b) Interior balconies or mezzanine floors not over 3,000 square feet gross area used entirely for storage.

(c) Open interior balconies or open mezzanine floors not over 750 square feet gross area used for purposes other than nonoccupied storage.

(d) One-story office buildings, without a basement or mezzanine, having a gross floor area, per floor, of not more than 1,800 square feet. Only one office operation per floor level shall be permitted. The single exit from the first floor or ground floor(s) shall be an outside exit serving only that floor level.

(e) Retail establishments not over 750 square feet net area, provided there are 2 directions for exiting from the entrance door of the store.
(3) **Office Suite Exiting.** One exit will be permitted from office suites having a floor area of not more than 1,800 square feet net area, provided there are 2 directions for exiting from the entrance door of the suite.

(4) **Exit Distance.** Additional exits shall be provided so that no part of any factory, office, mercantile or other building within the scope of this chapter will be more than 100 feet distant from an exit. Where approved automatic sprinklers are provided throughout the building, an increase in exit distance to 150 feet will be permitted. Hazardous occupancies, as specified in sections Ind 54.50-54.52, and buildings having contents which are liable to burn with extreme rapidity or from which poisonous fumes may be liberated or explosions occur in case of fire, shall have exits provided so that the maximum distance to exit is limited to 75 feet.

Note: The department uses the "triangulation method" to determine exit distance. The use of area to determine exit distance does not satisfy the intent of the rule.

(5) **Exit Distribution.** Exits in all buildings of this classification shall be so located and distributed so as to afford the best possible egress.

**History:** 1-2-56; cr. (1) (a), Register, September, 1959, No. 45, eff. 10-1-58; am. (1) (b), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (1) (b) eff. 3-1-71 and exp. 1-1-72, and cr. (1) (b) eff. 1-1-72, Register, July, 1971, No. 187; am. (1), Register, September, 1973, No. 213, eff. 10-1-73; r. and recr. Register, December, 1976, No. 276, eff. 1-1-79.

**Ind 54.03** Type of exits. (1) At least one-half of the exits required in accordance with section Ind 54.02 shall be stairways or standard exits to grade as specified in sections Ind 51.15-51.18. The other exits shall be either stairways, standard exits, or horizontal exits as specified in section Ind 51.19, or fire escapes as specified in section Ind 51.20. A fire escape will not be accepted as a required exit for any building level more than 5 stories or 55 feet above grade. An outside wooden stairway may be used as an exit for a 2-story building.

(a) **Exception.** The width of required exit stairways serving unoccupied areas (i.e., storage areas, equipment mezzanines and similar areas) not exceeding 750 square feet may be reduced to 3 feet 0 inches.

(b) **Exception.** Less than 3 risers may be used to elevated work stations (such as pharmacy floors, computer floors and similar areas) or to altars, podiums and similar areas, not in a required exit passageway.

(c) **Exception.** A spiral stairway may be used as a nonrequired convenience stairway in addition to all other required exit stairways in places of employment.

(d) **Exception.** A rescue platform (exterior balcony) of combustible construction may be used as a required second exit for 2-story buildings of Type 7 and Type 8 construction, provided the following conditions are satisfied:

1. The exit serves 8 or less people;
2. The exit platform is located not more than 10 feet above the adjacent exit discharge grade;

*See Appendix A for further explanatory material.*

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code
3. The platform area is at least 14 square feet, with a minimum dimension of 3 feet;

4. The platform is designed for 80 pounds per square foot live load plus dead load;

5. Railings are provided in accordance with the provisions of section Ind 51.16 (5);

6. Platforms having solid floors are provided with a roof equal in area to that of the platform.

(2) Every building which will accommodate more than 50 persons above the second story shall have at least 2 stairways.

(3) Wherever stairways are required under this classification, ramps with a slope not greater than one foot in 6 feet may be substituted. Ramps shall comply with all the requirements for stairways as to construction, enclosures, width, landing and lighting, and shall be surfaced with an approved non-slip material. Handrails shall not be required where the slope of the ramp is less than one foot in 10 feet.

History: 1-2-66; am. (1), Register, December, 1974, No. 229, eff. 1-1-75; cr. (1) (a) to (d), Register, December, 1977, No. 254, eff. 1-1-78; am. (1) (b), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 54.04 Required exit width. (1) The total required exit width from a building level shall be in accordance with the requirements of sections Ind 51.15 (6) and Ind 51.16 (3).

(2) Standard fire escapes (section Ind 51.20) may be substituted for stairways to the extent of not more than 1/2 of the required total width, subject to the provision of section Ind 54.02.

(3) Horizontal exits in accordance with the requirements of section Ind 51.19 may provide up to one-half of the required exit widths for any floor, subject to the provisions of section Ind 54.02.

History: 1-2-66; am. (1) (a) and (b) and (3) (a) and (b), Register, June, 1972, No. 198, eff. 1-1-73; z. and recr. (1) and (3), c. (4), Register, December, 1974, No. 226, eff. 1-1-75.

Ind 54.05 Capacity of buildings. (1) In calculating the aggregate width of exits, the capacity of the buildings shall be established as follows:

(a) Stores, first floor and basement ------------ 30 sq. ft. per person
(b) Stores, second floor and above ------------ 60 sq. ft. per person
(c) Dining rooms, cafes, taverns, etc. -------- 10 sq. ft. per person
(d) Places of seated assemblage -------------- 7 sq. ft. per person
(e) Warehouses ----------------------------- 300 sq. ft. per person
(f) Factories and offices ---------------------- 75 sq. ft. per person

(2) The above figures are based on the net area of each occupied space. Where dining rooms, cafes, dance halls and places of seated assemblage accommodate more than 100 persons, see section Ind 55.01.
(3) In other occupancies not specified above, the capacity shall be determined by the actual number of persons liable to be accommodated therein and no greater number of persons will be permitted therein.

**Ind 54.06 Exit doors.** (1) Every door which serves as an exit from a room or space accommodating more than 25 persons, or is an exit from a public passageway or stairway shall be a standard exit door as specified in section Ind 51.15.

(2) Every exit doorway from each floor, other than the principal entrance on the first floor, shall be indicated by an approved illuminated sign over the door bearing the word EXIT or OUT in plain letters not less than 6 inches in height.

*History: 1-2-58; am. (1), Register, December, 1978, No. 276, eff. 1-1-79.*

**Ind 54.07 Passageways.** Where there is not direct access to outside exit doors, safe and continuous passageways, aisles or corridors leading directly to every exit shall be maintained at all times on all floors of all buildings. Every passageway, aisle or corridor shall conform in width to the rule for width of stairways as specified in section Ind 54.04. Widths shall be measured in the clear, at their narrowest points produced by any projection, radiator, pipe or other object and the required width shall be maintained clear and unobstructed at all times.

**Ind 54.08 Enclosure of stairways and shafts. (1)** All stairways including landings, ramps and elevator shafts, shall be enclosed as shown in table 51.03-A.

(2) All doors opening into such enclosures shall be as specified in section Ind 51.047, and all windows shall be of wired glass and metal frames and sash.

*Note: Elevators and elevator enclosures: For requirements governing the installation and operation of elevators, and the construction and protection of elevator stairways, see the elevator code issued by the department of industry, labor and human relations, which code applies to all public buildings and places of employment.*

*Note: Monumental stairs: see section Ind 51.02 (11) (c).*

*History: 1-2-58; am. (1) (a), (b), (c), (d) and (2), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (1) (a), (b), (c), (d) and (2) eff. 1-1-72; cr. (1) (a), (b), (c), (d) and (2) eff. 1-1-72, Register, July, 1971, No. 187; r. and recr. (1), Register, June, 1972, No. 198, eff. 1-1-73; am. (3), Register, December, 1977, No. 204, eff. 1-1-78; r. (3), Register, December, 1978, No. 276, eff. 1-1-79.*

**Ind 54.10 Trap doors and floor openings.** Every opening through any floor or through any roof used by the public or by employees shall be guarded by a substantial enclosure or rail not less than 3 feet 6 inches high. Floor openings in buildings of more than 2 stories, unless enclosed with fire-resistive enclosures as specified in section Ind 54.09 shall be protected by fire-resistive doors as specified in section Ind 51.047.

*History: 1-2-58; am. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. eff. 1-1-72; cr. 1-1-72, Register, July, 1971, No. 187.*

**Ind 54.11 Lighting.** (1) All stairways, fire escapes and exits and the passageways leading thereto when used at night shall be properly illuminated to facilitate egress. The intensity of illumination shall be not less than 2.5 foot candles.

(e) Garages, service stations and filling stations. Toilet rooms shall be provided in accordance with the requirements of this subsection.

1. Garages. Separate toilet rooms for each sex shall be provided in all service and repair garages, body shops, automobile tire and battery shops, and buildings of similar use, except that a single toilet room, shared in common, may be provided in buildings which accommodate not more than 10 employees or 25 patrons. Separate toilet rooms for employees and patrons need not be provided if toilet rooms are accessible to both employees and patrons.

2. Service stations and filling stations. Separate toilet rooms for each sex shall be provided in service stations and filling stations, including self-service stations. Separate toilet rooms for employees and patrons need not be provided if toilet rooms are accessible to both employees and patrons.

(2) Sanitary fixtures. In public buildings and places of employment, except taverns, restaurants, filling stations and service stations, the total number of sanitary fixtures required in the building shall be based upon the total number of occupants of the building and shall be determined from the ratios established in Table 54.12-A, but in no case shall the ratio of the number of fixtures to the number of employees be less than those specified in Table 54.12-B. The total number of occupants will be considered equally divided between men and women unless a different ratio is approved by the department. The requirements of this section do not apply to the buildings exempt from toilet rooms under Ind 54.12 (1).

(a) Exceptions: 1. Taverns and restaurants shall provide at least one toilet room for each sex.

a. Taverns and restaurants accommodating 50 or less total occupants shall provide at least one water closet (WC) and one lavatory (L) for each sex.

b. Taverns and restaurants accommodating more than 50 occupants in total shall provide at least 2 water closets (WC) and one lavatory (L) for the females and at least one water closet (WC), one urinal (U) and one lavatory (L) for the males.

2. Filling stations and service stations shall provide at least one toilet room for each sex. A minimum of one water closet (WC) and one lavatory (L) shall be provided for each sex, but in no case shall the ratio of number of fixtures to number of employees be less than those specified in Table 54.12-B.

History: 1-2-56, am. (3) (a) and (b), and (6), Register, September, 1959, No. 46, eff. 10-1-59; 7, and recr. Register, December, 1976, No. 202, eff. 1-1-77; am. (1) (a) 1, (11) (b) and (c) 1, r. </tr>
</tbody>
</table>

Note 1: Showers shall be provided in public pool facilities and for employees exposed to occupational hazards such as poisons, infectious or irritating materials.

Example 41: Mercantile building with 300 patrons and 50 employees = 350 total occupants; equally divided between sexes = 175 males, 175 females. From Table 54.12-A, 201-400 total occupants: males require one water closet, one urinal, one lavatory; females require 2 water closets, one lavatory. Check for compliance with Table 54.12-B for employees: 50 employees, equally divided between sexes = 25 males, 25 females; 16-35 employees of each sex, males require one water closet, one urinal, one lavatory; females require 2 water closets, one lavatory. Therefore, the number of fixtures required by Table 54.12-A also satisfies the requirements of Table 54.12-B for employees and governs.

Example 42: Office building with 300 employees and 50 patrons = 350 total occupants; equally divided between sexes = 175 males, 175 females. From Table 54.12-A, 201-400 total occupants: males require one water closet, one urinal, one lavatory; females require 2 water closets, one lavatory. Check for compliance with Table 54.12-B for employees: 300 employees, equally divided between sexes = 150 males, 150 females; 111-150 employees of each sex, males require 4 water closets, 2 urinals, 3 lavatories; females require 6 water closets, 3 lavatories. Therefore, the number of fixtures required by Table 54.12-B for employees is more restrictive and governs.

Note 2: The ratios established in Table 54.12-B for employees are taken directly from the U.S. Department of Labor, Occupational Safety and Health Act (OSHA) regulations. Therefore, section Ind 50.25, petitions for modification, is not applicable to the requirements of this table.

Note 3: See also rules of the department of health and social services for sanitary fixtures for public swimming places, mobile home parks, camping grounds, camping resorts, recreational camps and educational camps.

Note 4: See Wis. Adm. Code Ch. Ind 1000-2000—Wis. Safety and Health Code, for additional washing facilities required in places of employment where environmental hazards are present.
Ind 54.13 Change rooms and lunchrooms. (1) Change rooms. Change rooms equipped with storage facilities for street clothes shall be provided where employees are required to wear protective clothing due to the nature of the employment and where employees are exposed to toxic materials and industrial poisons. Separate storage facilities for street clothes and work clothes shall be provided for employees who work with industrial poisons.

Note: See also chapter H 96, rules of the department of health and social services, for requirements for dressing rooms and lockers in restaurants.

(2) Lunchrooms. A space for eating lunch shall be provided in all places of employment where there is exposure to injurious dusts, toxic material and industrial poisons. Such space shall be physically separate from any location where there is exposure to toxic materials. Toilet rooms shall not be permitted to serve as lunchrooms.

History: Cr. Register, December, 1976, No. 358, eff. 1-1-77.

Ind 54.14 Isolation of hazards. (1) All heating boilers and furnaces, power boilers, fuel rooms, storage vaults for paints, oils, and similar combustibles and other similar hazards in a building shall be isolated from the rest of the building by at least a 2-hour fire-resistant enclosure as specified in section Ind 51.04; except that in buildings not more than 2 stories in height and having a floor area of not more than 3,000 square feet per floor, a 1-hour fire-resistant enclosure as specified in section Ind 51.04, or better, shall be provided.

(2) All openings shall be protected with self-closing fire-resistant doors as specified in section Ind 51.047.

(3) Fuel-fired space heaters, suspended furnaces, and vented and unvented unit heaters may be used without an enclosure where approved by the department. Where suspended furnaces and vented and unvented unit heaters are used without an enclosure, all such units shall be located at least 7 feet above the floor.

(a) Exception. The rated enclosure for heating equipment in factories may be omitted if the burner of the equipment is located at least 7 feet off the floor and the equipment is protected from physical damage (see Table 64.21).

History: 1-2-56; am. (1) and (2), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (1) and (2) eff. 8-1-71 and exp. 1-1-72; cr. (1) and (2) eff. 1-1-72, Register, July, 1971, No. 281; renum. from 64.13, Register, December, 1976, No. 252, eff. 1-1-77; am. (3), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 54.15 Standpipes. (1) Fire department standpipes. Fire department standpipes shall be provided in all buildings exceeding 60 feet in height.

(2) First-aid standpipes. First-aid standpipes shall be provided in all buildings 3 stories or more in height in which the floor area of each story is more than 3,000 square feet, unless the floor area is divided with noncombustible 0-hour or 3/4-hour or better rated partitions into areas of 3,000 square feet or less, or unless an approved automatic sprinkler system is installed.

History: 1-2-56; renum. from 54.14 and r. and recr. Register, December, 1976, No. 252, eff. 1-1-77; am. (2), Register, December, 1977, No. 264, eff. 1-1-78.
Ind 54.16 Automatic sprinklers. (1) A complete automatic sprinkler system, as specified in section Ind 51.23, shall be provided in every building of this classification where more than 50 persons are employed or accommodated above the third story except as provided below:

(a) Office buildings.

(b) In 3 story buildings other than office buildings with more than 50 persons on the third floor, only basements and sub-basements must be sprinklered.

(c) An office building in which one or more floors are used for mercantile purposes, only the mercantile portion must be sprinklered.

(d) Buildings of Type No. 1 and No. 2 construction whose contents are not readily combustible.

History: 1-2-56; r. and rec., Register, December, 1970, No. 150, eff. 1-1-71; am. (1) (a) Register, June, 1972, No. 196, eff. 1-1-73; return from 54.15, Register, December, 1976, No. 262, eff. 1-1-77.

Ind 54.17 Fire alarm. A fire alarm system complying with section Ind 51.24 shall be provided in every factory or workshop where more than 10 persons are employed above the second story except buildings which are provided with a complete automatic sprinkler system and except Type No. 1 and No. 2 buildings whose contents are practically noncombustible.

History: 1-2-56; r. and rec., Register, June, 1972, No. 196, eff. 1-1-73; return from 54.18, Register, December, 1976, No. 252, eff. 1-1-77.

Ind 54.18 Floor load signs. (1) In every factory, workshop, warehouse, or other building where material is piled, notices of a permanent character shall be painted or otherwise prominently displayed, stating the live load in pounds per square foot which the floor is designed to carry. Such notices shall be placed in full view, on each floor.

(2) Where floors are always used for the storage of some particular material, the walls shall be marked to the height to which the material shall be piled without exceeding the safe load.

History: 1-2-49; return from 54.17, Register, December, 1976, No. 262, eff. 1-1-77.

Ind 54.19 Signs indicating number of persons. In all buildings of this classification where 50 or more persons are accommodated on any floor above the second, notices shall be prominently displayed stating the maximum number of persons on each floor for whom stairways and other exits have been provided according to sections Ind 54.02—Ind 54.06. Such notices shall be placed in full view, on each floor.

History: 1-2-56; return from 54.18, Register, December, 1976, No. 262, eff. 1-1-77.

Ind 54.20 No smoking signs. Smoking shall not be permitted in retail establishments where flammable materials are handled or sold. Suitable signs bearing the words "No Smoking" shall be erected in all places where such hazard exists.

History: 1-2-56; return from 54.19, Register, December, 1976, No. 262, eff. 1-1-77.
Ind 54.21 Tents. All tents used for sales or storage purposes shall conform to the requirements specified for tents in sections Ind 55.68—Ind 55.63, inclusive of this code.

History: Cr. Register, September, 1969, No. 46, eff. 10-1-59; renum. from 54.20, Register, December, 1970, No. 252, eff. 1-1-77.

Ind 54.22 Mini-warehouses and mini-garages. (1) Scope. The rules of this section shall apply to mini-warehouse and mini-garage buildings as defined in (2).

(2) Definitions. (a) Mini-warehouse. Mini-warehouses are unoccupied compartmentalized warehouse buildings having one or more overhead doors serving each compartment.

(b) Mini-garage. Mini-garages are unoccupied compartmentalized storage buildings having one or more overhead doors serving each compartment. The compartments may be used for the storage of equipment having internal combustion engines. (Also see section Ind 54.50.)

(3) Class of Construction. (a) Mini-warehouses shall be of type B, wood-frame unprotected construction, or better.

2. Storage of hazardous materials or vehicles is prohibited. The owner shall submit an affidavit to the department to the effect that the building will not be used for this purpose.

(b) Mini-garages. Hazardous storage or vehicle storage mini-garages shall be of type B, metal frame unprotected construction, or better.

1. Exception. Type B wood frame unprotected construction may be used if the storage space is compartmentalized into areas of 500 square feet or less by one-hour rated walls and ceilings, including exterior walls. One-hour rated ceilings are not required provided the one-hour rated walls are extended up to and make tight contact with the roof deck.

Note: The department will accept one layer of 5/8-inch type X gypsum wallboard on the inside of the exterior walls.

(4) Number of exits. Two exits shall be required from each storage compartment.

(a) Exception. One exit is permitted from compartments of 3,000 square feet or less.

(5) Type of exits. (a) Standard exit doors shall be required for compartments with the capacity of 25 persons or more, using the ratios established in section Ind 54.05.

(b) Nonstandard exit doors (i.e., overhead, sliding, and similar doors) may be used for compartments with a capacity of less than 25 persons.

(6) General. Mini-warehouses and mini-garages shall comply with the applicable sections of this code except as otherwise specified in this section.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.
HAZARDOUS OCCUPANCIES

Ind 54.50 Garages. (1) Definitions. (a) A garage is a building, or part of a building, which accommodates or houses self-propelled vehicles. For the purpose of this code the term vehicle includes land, air and water vehicles.

(b) A private garage is one used in connection with a private residence for the purpose of housing self-propelled vehicles owned by the occupant of the residence and used only for personal or family service.

(2) Construction requirements. (a) All garages, except private garages, which are more than 500 square feet in area, shall have walls and roof of types No. 1 through No. 6 construction as specified in section Ind 51.03, and all floors of vehicle storage rooms, salesrooms and repair shops shall be of not less than 4-hour fire-resistant construction as specified in section Ind 51.04.

Exception: 1. A garage not more than one story in height and 2,000 square feet in area may have walls and roof of type No. 7 or No. 8 construction if located at least 100 feet from any other building or boundary line between premises.

2. A hangar for the storage of not more than one airplane, or a boat-house for the storage of not more than one motor boat, may be of type No. 7 or No. 8 construction if located at least 15 feet from any property line or other building.

Note: Section 187.19, State., permits retail dealer’s buildings for the storage of farm tractors, trucks and motorized farm machinery to be metal-covered, pole type or frame construction. Buildings constructed of other than metal or concrete may not be located closer than 30 feet to any other building. Buildings in excess of 50 feet in length require more than one door. The statute requires that motor fuel and storage batteries be removed from the vehicles and prohibits vehicle overhaul or repair in the building.

(b) All walls, or parts of walls, nearer than 5 feet to a boundary line between premises or to any other building shall be unperierced. All walls, or parts of walls, nearer than 10 feet, but not nearer than 5 feet, to a boundary line between premises or to any other building shall have all openings therein protected by means of fire-resistant doors and windows as specified in sections Ind 51.047 and 51.048.

(c) Where a garage which is more than 500 square feet in area is built in connection with a building used for other purposes, it shall be separated therefrom by means of 4-hour fire-resistant walls as specified in section Ind 51.04 and unperierced 4-hour fire-resistant floors above and below as specified in section Ind 51.04. All openings in the walls to adjoining parts of the building shall be protected by means of self-closing fire-resistant doors as specified in section Ind 51.047. Stairways from garages leading to upper stories shall be separated from the garage area with walls of 4-hour fire-resistant construction as specified in section Ind 51.04 with all openings protected by means of self-closing fire-resistant doors as specified in section Ind 51.047.

(d) Where a garage which is less than 500 square feet in area is built in connection with a public building or place of employment under this code, the garage shall have walls and ceilings of not less than 1-hour fire-resistant construction as specified in section Ind 51.04, and the openings...
to adjoining parts of the building shall be protected by means of fire-resistant doors as specified in section Ind 51.047.

(3) FIRE PROTECTION. Boilers, furnaces and all open flame equipment within garages and service stations shall be effectively separated from other areas by not less than 2-hour fire-resistive walls, floors and ceilings as specified in section Ind 51.04. Such enclosures in basements shall have no openings into other basement areas. All stairways leading to such basement enclosures from the first floor shall be enclosed on the first floor with not less than 2-hour fire-resistive construction as specified in section Ind 51.04, and the opening therefrom protected with a fire-resistant door as specified in section Ind 51.047.

(a) Suspended furnaces and direct fired unit heaters fired with liquid fuel or gas may be used without an enclosure where approved by the department of industry, labor and human relations. Where approved, the equipment and installation shall satisfy requirements of section Ind 64.22.

(b) In garages or service stations which are heated by a suspended furnace located in a utility room or storage room, the enclosing walls, floor and ceiling shall be of 2-hour fire-resistive construction unless one side of the room is left open.

(4) FLOOR PITS. There shall be no pits or other depressions in the floor of any garage area, except that this requirement shall not apply to the shallow depressions formed to secure floor drainage, nor to catch basins installed in compliance with the provisions of the plumbing code issued by the department of health and social services nor to floor openings for access to regular basements.

(a) This will permit service openings in the floors of garages or service stations provided that the area below can be classed as regular basements and are ventilated in accordance with the requirements of the building, heating, ventilating and air conditioning code.

History: 1-2-36 ind recr. (2) (c). Register. September, 1939, No. 45, eff. 10-1-39; am. Register, January, 1931, No. 91, eff. 2-1-31; am. (3) (a), Register, December, 1975, No. 144, eff. 1-1-76; am. (2) (a) intro. par., (b), (c), (d) and (e) intrapar., Register, February, 1971, No. 162, eff. 2-1-71; and recr. (2) (a) intro. par., (2) (b), (c), (d) and (3) intrapar., eff. 1-1-71, apd. 1-1-72; cr. (2) (a) intro. par., (2) (b), (c), (d) and (3) intrapar., eff. 1-1-72, Register, July, 1971, No. 187; am. (2) (a), Register, June, 1972, No. 188, eff. 1-1-73; am. (2) (b) and (3) (a), Register, December, 1975, No. 240, eff. 1-1-76; renum. from 57.50 and am. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 54.51 Filling stations; buildings and structures. (1) DEFINITIONS. (a) By filling station is meant one or more pumps, tanks, and other pieces of equipment used in the storage and dispensing of liquid fuels and arranged for the sale of such liquid fuels to the public.

(b) By dispensing area is meant any area within 15 feet of any pump or other dispensing equipment.

(c) By basement or open space under a floor or dispensing area is meant any space that does not have an outlet at its lowest level, at or above grade.

(2) CONSTRUCTION. (a) All buildings having a service space of not more than 500 square feet in area, designed to accommodate motor-
driven vehicles, and all other buildings erected within 15 feet of the dispensing equipment, shall be of types No. 1 through No. 6 construction as specified in section 51.043, except where canopies are provided over the dispensing equipment such canopies shall be of noncombustible construction throughout.

1. Pumps or other dispensing equipment serving liquid fuel to the public, which are located within or under any occupied part of any building or structure, shall be installed in compliance with the provisions of the flammable liquids code.

(b) Buildings not more than one story in height and not exceeding 500 square feet in area may be of type No. 7 or No. 8 construction if located at least 15 feet from dispensing equipment and 10 feet from the boundary lines between premises and from other buildings on the same premises.

(c) Buildings more than 500 square feet in area used as office buildings exclusively, or in connection with other nonhazardous occupancies, may be of type No. 7 or No. 8 construction if not more than one story in height and located at least 30 feet from boundary lines between premises, from other buildings on the same premises and from the dispensing equipment.

(d) All walls, or parts of walls, in buildings under paragraph (a) which are nearer than 6 feet to a boundary line between premises or to any other building shall be unperforated. All walls, or parts of walls nearer than 10 feet, but not nearer than 5 feet, to a boundary line between premises or to any other building shall have all openings therein protected by means of fire-resistant doors and windows as specified in sections 51.047 and 51.048.

(c) The main floor level of any building erected within 15 feet of equipment used to dispense liquid fuel shall not be below the level of the driveway or grade at such equipment.

(f) There shall be no basement or other open space under the floor of the dispensing area outside of the building. There shall be no basement or other open space under the floor of any filling station building, unless:

1. The main floor level is at least 6 inches above the driveway or grade at the dispensing equipment, and

2. There is no outside door, window or other wall opening to such under floor space, except fuel chutes or other vertical openings having a tight-fitting cover, with the bottom of such opening at least 6 inches above the driveway or grade at the dispensing equipment.

3. The floor and enclosure of the underfloor space is of 4-hour fire-resistant construction as specified in section 51.04.

4. The under floor space is effectively vented by gravity means.

Notes: For requirements applying to floor pits, see section 51.05.

History: 1-2-48; am. (2) (a); cr. (2) (a), Register, September, 1950, No. 45, eff. 10-1-50; am. (2) (a) and (2) (b) (3) a., Register, February, 1951, No. 107, eff. 7-1-51; r. and re enr. (3) (d).
Ind 54.52 Automobile tire or battery shops. (1) Any building, or part of a building, in which tires are repaired or fitted to vehicles shall be constructed, equipped and maintained as a garage under section Ind 54.50.

(2) Any building or part of a building, in which electric storage batteries are charged, repaired, or are installed in vehicles shall be constructed, equipped and maintained as a garage under section Ind 54.50.

Ind 55.61 Illumination: exit lights and signs (p. 182)
Ind 55.62 Boiler and furnace room (p. 182)
Ind 55.63 Toilet facilities (p. 183)
Ind 55.64 Outdoor theaters (p. 183)

Ind 55.001 Theaters. In the theater classification, are included all buildings or parts of buildings, containing an assembly hall, having a stage which may be equipped with curtains or permanent or movable scenery, or which is otherwise adaptable to the showing of plays, operas, motion pictures or similar forms of entertainment.

Ind 55.01 Assembly halls. (1) In the assembly hall classification are included all buildings, or parts of buildings, other than theaters, which will accommodate more than 100 persons for entertainment, recreation, worship or dining purposes.

Note: For assembly areas in connection with schools and other places of instruction, refer to Wis. Adm. Code chapter Ind 66.

(a) Every assembly hall which will accommodate not more than 100 persons shall conform to the requirements of Wis. Adm. Code chapter Ind 61, covering factories, office and mercantile buildings.

History: 1-2-08; am. (1) (Intro. par.), Register, March, 1972, No. 105, eff. 4-1-72.
Ind §5.02 Class of construction. (1) The capacities of buildings or parts of buildings in this classification for the various types of construction shall not exceed, and shall comply with, the following requirements:

**MAXIMUM CAPACITIES**

<table>
<thead>
<tr>
<th>Type of Construction</th>
<th>With Stair</th>
<th>Without Stair</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type No. 1 and No. 2</td>
<td>No Limit</td>
<td>No Limit</td>
</tr>
<tr>
<td>Type No. 3 and No. 4</td>
<td>750</td>
<td>1,500</td>
</tr>
<tr>
<td>Type No. 5 and No. 6</td>
<td>500</td>
<td>1,000</td>
</tr>
<tr>
<td>Type No. 7 and No. 8</td>
<td>300</td>
<td>750</td>
</tr>
</tbody>
</table>

(a) Exception. For unlimited capacity, the fire protection of structural steel supporting the roof may be omitted for one-story buildings meeting type No. 1, 2 and 3 construction provided the building has no ground or basement floors. Heavy timber columns and roof framing may be substituted for structural steel framing. The roof decking shall be of noncombustible or heavy timber construction.

(2) Type No. 7 and No. 8 construction. (See Ind 51.03.) Where buildings of these classifications are erected of Type No. 7 or No. 8 construction, the following restrictions shall apply:

(a) Not more than one story in height without a balcony, and with no ground floor or basement except a heating and fuel room enclosed with fire-resistant construction as specified in section Ind 55.29, with all interior openings protected with self-closing fire-resistant doors as specified in section Ind 51.047.

1. Exception. Places of worship are permitted to have a full basement and a balcony seating not more than 30 persons.

2. Exception. One-story and ground-floor assembly halls of type 7 or 8 construction will be permitted providing the following conditions are satisfied:

a. Both levels shall exit directly to grade. One exit stair from the lower level up to the exit discharge grade is permitted providing the stair is enclosed to the outside by 2-hour fire-resistant rated construction.

b. The ground story exterior walls shall be of masonry or concrete.

c. The lower level shall be separated from the upper level by 2-hour fire-resistant rated construction or better. The first floor supports shall also be of 2-hour fire-resistant rated construction.

d. All stairways shall be enclosed by at least 2-hour fire-resistant rated enclosures.

e. The maximum capacity of the building is limited to 750 occupants.

f. All other requirements of chapter Ind 55 are satisfied.

3. Exception. Additions to existing buildings of type 7 or 8 construction having a basement or second floor, or both, will be permitted under the scope of chapter Ind 54 providing the following conditions are satisfied:

a. The building contains no other occupancy except the owner's private residence.
b. Public occupancy is prohibited in the basement and second floor.

c. The addition does not contain a basement or second floor.

d. The public occupancy areas are divided by partitions, dividers and similar objects into definable areas having a maximum capacity of 100 occupants each. Each definable area shall have 2 independent, remote exits to the outside.

e. The total capacity of the building is limited to 750 occupants.

f. All other requirements of chapter Ind 54 are satisfied.

g. This exception does not apply to buildings originally constructed within 5 years of submissions of plans for the addition.

(b) Located at least 20 feet from any other building or adjoining property line.

c. Is not built in connection with a building used for any other purpose.

(3) Balconies accommodating more than 100. In any theater or assembly hall, balconies which accommodate more than 100 persons shall be of Type No. 1 or No. 2 construction as specified in section Ind 51.03.

History: 1-2-66; (1); (1) (a); (3); (2) (a); (2) (b); (2) (c); (2) (d); (2) (e); (2) (f); (3); am. Register, June, 1952, No. 6, eff. 7-1-52; am. (1) (a), Register, August, 1957, No. 20, eff. 9-1-57; am. Register, January, 1961, No. 61, eff. 2-1-61; am. (2) (a), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (2) (a) eff. 8-1-71 and exp. 1-1-72; cr. (2) (a) eff. 1-1-72, Register, July, 1971, No. 187; r. and recr. (1), am. (2) intro. par. and (3), Register, June, 1972, No. 198, eff. 1-1-73; cr. (2) (d) and (e), Register, December, 1977, No. 264, eff. 1-1-78; am. (1) (a), cr. (2) (a) 1 to 3, Register, December, 1978, No. 276, eff. 1-1-79.

Ind 55.03 Height above grade. (1) Theatres. The height of the sills of the principal entrance doors to any theater, as defined in section Ind 55.001, shall be not more than 10 inches above the outside grade at that point. The floor level at the highest row of seats on the main floor shall not be more than 6 feet above the outside grade at the main entrance; the floor level at the lowest row of seats on the main floor shall be not more than 6 feet below, or above, the grade at the nearest exit.

(2) Assembly halls and roof gardens above first story. Where assembly halls are provided above the first story, the following limitation of occupancy, type of construction and exit facilities shall apply:

<table>

[One smokeproof stair tower from the level of the assembly hall leading directly to the exterior at street grade shall be provided for every 7000 persons capacity, or fraction thereof. These stairways shall be at least 44 inches wide and shall be in addition to other required stairways in the building.

Register, December, 1978, No. 276]

Building and heating, ventilating and air conditioning code
(3) Basement assembly hall. An assembly hall may be placed in the basement of a Type No. 1 or No. 2 building if the capacity does not exceed 2,500 persons, or in the basement of a building of Type No. 3 through No. 6 construction if the capacity does not exceed 400 persons.

History: 1-2-56; r. and recr. Register, September, 1973, No. 190, eff. 1-1-74; r. and recr. (2) and (3), Register, June, 1972, No. 196, eff. 1-1-73; r. and recr. (2), Register, September, 1973, No. 213, eff. 10-1-73.

Ind 55.04 Exposure and courts. (1) Every theater or assembly hall which accommodates more than 600 persons shall have at least 3 walls shutting on streets, alleys, or open courts.

(2) The wall containing the main entrance to any theater or assembly hall shall shut on a street. The lobby or passageway leading from the main entrance doors to the foyer or auditorium shall be direct and unobstructed and of a minimum width equal to the sum of the widths of the main entrance doors. There shall be no openings from other occupancies to such a corridor or passageway.

(3) The width of every exit court shall be at least 6 feet for an occupancy not exceeding 500 persons, and shall be increased at the rate of one foot per each 500 persons additional. Every such court shall lead to a public thoroughfare, either directly, or through a passageway of equal width, not less than 8 feet high enclosed with unpierced 4-hour fire-resistive walls, ceiling and floor as specified in section Ind 51.04. The floor and ceiling shall be designed for a live load of not less than 150 pounds per square foot. No such court, or passageway shall be used for storage or any other purpose whatsoever.

History: 1-2-56; r. and recr. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (3) eff. 8-1-71 and exp. 1-1-72; r. (3) eff. 1-1-72, Register, July, 1971, No. 187.

Ind 55.05 Separation from other occupancies. (1) Every theater and assembly hall shall be separated from any other occupancy by an absolute occupancy separation as specified in section Ind 51.08, except that a special occupancy separation as specified in section Ind 51.08 may be used between an assembly hall accommodating not more than 750 persons and any other non-hazardous occupancy. Where a special occupancy separation is permitted in this section, a single fire-resistive door may be used for the protection of openings.

(2) For assembly halls of unlimited capacity located on upper floors of Type No. 1 and No. 2 buildings which are served by elevators, the elevator openings may be permitted under the requirements for special occupancy separation specified in section Ind 51.08, but otherwise absolute occupancy separation is required.

(3) Where a garage which is more than 500 square feet in area, chemical laboratory or other occupancy where flammable or explosive liquids or gases are used or stored is built in connection with a building used for a theater or assembly hall, it shall be separated therefrom by means of 4-hour fire-resistive walls and unpierced 4-hour fire-resistive floors above and below as specified in section Ind 51.04. All openings in the wall to adjoining parts of the building shall be protected by means of self-closing fire-resistive doors as specified in section Ind 51.047.

Register, December, 1978, No. 576
Building and heating, ventilating and air conditioning code
(4) An occupancy separation is not required between a church and a
day school operated by the church, providing the building complies with
the requirements of chapters Ind 55 and Ind 56. Where these 2 chapters
differ, the more stringent requirement shall apply.

**Ind 55.06 Capacity.** (1) The following table includes various types of
occupancy within the scope of this section, together with the method to
be used in determining the capacity.

(2) No greater number of persons than the number thus established
shall be permitted in any theater or assembly hall.

(3) The capacity of theaters and theater lobbies must be combined to
determine the theater capacity.

(4) (a) Every theater or assembly hall having movable seats shall dis-
play a sign stating the maximum number of persons permitted by code.

1. The sign shall be placed in a conspicuous place at the main entrance
to each theater or assembly hall.

2. The sign shall have the following wording: "Limit. (Number) Per-
sone." The maximum number of persons shall be determined by the ca-
cacity as permitted by subsection (2) and section Ind 55.12. The letter-
ing shall be white on a dark background. The letters shall be not less
than 1 1/2 inches in height and the number shall be not less than 3 inches
in height.

Register, December, 1977, No. 276

Building and heating, ventilating
and air conditioning code
Ind 55.07 Number and location of exits. (1) Every floor and balcony of a theater and assembly hall shall be provided with not less than 2 exits, placed as far apart as practicable and so located that if any exit is blocked, some other exit will still be available from every part.

Exception: In places of worship, only one exit will be required from a balcony seating not more than 30 persons.

(2) Where more than 600 persons are accommodated, there shall be at least 3 exits and where more than 1,000 persons are accommodated, there shall be at least 4 exits.

(3) Exits shall be distributed on all sides which adjoin streets, alleys or open courts.

Ind 55.08 Type of exits. (1) The required exits from any part of a theater or assembly hall shall be exit doorways, stairways or ramps.

(2) All exits to grade from a higher or lower level shall be stairways or approved ramps. In all theaters and in assembly halls having a capacity of more than 400 persons, where the exit rise is not more than 3 feet approved ramps shall be used. By approved ramp is meant an incline located inside the building and having a slope of not more than one foot of rise in 8 feet.

(3) Stairway exits shall be interior stairways, or smokeproof towers as specified in section Ind 51.17; except that “B” type fire escapes may be used as exits from balconies for not more than one-half the required exit width, if located against blank walls.

Ind 55.09 Stairways. (1) Every stairway in a theater or assembly hall shall be enclosed as specified in section Ind 51.18 with the following exceptions:

(a) Stairways from the main floor to the first balcony need not be enclosed.

(b) Stairways from the basement to the first floor of a single story place of worship need not be enclosed if they lead directly to the exits.

(2) A room may be placed under a stairway platform landing of 2-hour fire-resistive construction or better provided such room does not have combustible materials or hazardous equipment stored or operated therein. The partitions shall be constructed of noncombustible materials. All openings shall be protected with 20-minute fire door assemblies, or equivalent.

(3) Stairways and steps which have more than 3 risers shall have handrails on both sides.

(4) Every stairway used by the public in a theater or assembly hall shall have a uniform rise of not more than 7½ inches and a uniform tread of not less than 10 inches, measuring from tread to tread and from riser to riser. No winders shall be used and there shall be not less than 3 nor more than 16 risers in any run.

Register, December, 1978, No. 278
Building and heating, ventilating
and air conditioning codes
Theatres, assembly halls

(a) Exception. Less than 3 risers may be used to elevated altars, podiums and similar areas in churches provided the elevated area is not part of a required exit passageway.

Note. See section Ind 51.16 for general stairway requirements.

History: 1-2-46; am. Register, January, 1961, No. 01, eff. 2-1-61; r. and rev. Register, February, 1968, No. 146, eff. 3-1-68; am. (4), Register, February, 1971, No. 132, eff. 7-1-71; am. (2), Register, December, 1974, No. 228, eff. 1-1-78; am. (1) (intex.) and cr. (4) (a), Register, December, 1978, No. 278, eff. 1-1-79.

Ind 55.10 Exit doorways and doors. (1) Every required single exit doorway shall contain a standard exit door as specified in section Ind 51.16. For double doors, with or without Mullions, the width of each door may be reduced to 2 feet 6 inches.

(2) No single door or leaf of a double door, shall be more than 3 feet 6 inches wide, and no 2 doors shall be hinged together.

(3) No rolling, sliding or revolving door shall be counted as an exit from any theater or assembly hall, nor shall any such door be permitted where it would be liable to be used by the public as an exit.

(4) Sills at all exit doorways shall be level and flush with adjacent inside floors and ramps. Where an aisle or passageway leads to an exit from either side of the exit doorway there shall be a level floor space at the doorway subtending the width of the aisle and the doorway.

Ind 55.11 Exit lights. (1) In every theater and assembly hall, except church auditoriums, exit lights shall be provided immediately over all exit doorways, and in such other places as may be necessary to direct the occupants to exit doorways and to a street, alley or exit court. The installation of such exit lights shall comply in all respects with the provisions of the Wisconsin state electrical code.

(2) Every light over an exit doorway shall be a red illuminated sign bearing the word EXIT or OUT in plain letters not less than 5 inches in height.

(3) All exit lights shall remain lighted during each occupancy and until the occupants have left the building.

Ind 55.12 Required exit width. (1) The total required exit width from a building level shall be in accordance with the requirements of sections Ind 51.15 (6) and Ind 51.16 (3).

(2) In theaters, the width of the front entrance shall be not less than $\frac{1}{2}$ of the total required exit width.

History: 1-2-56; am. (1), Register, June, 1972, No. 188, eff. 1-1-78; am. (1), Register, December, 1974, No. 228, eff. 1-1-78.

Ind 55.13 Seating. (1) All seats, chairs and benches shall be placed not less than 32 inches back to back measured horizontally, except that for grandstands and bleachers without back rests this dimension may be reduced to 22 inches. For benches without arms, grandstands, and bleacher seats, the seating capacity shall be established by allowing one sitting or seat to each 18 inches of length. (See section Ind 55.54.)

(2) All seats, chairs, and benches, except chairs in boxes or loggias, shall be securely fastened to the floor; or if the floor is level, the seats or
chairs may be fastened together in groups of 3 or more. Loose chairs or seats shall not be used unless a special permit is secured from the department of industry, labor and human relations.

(3) There shall not be more than 12 seats in a row between aisles, nor more than 6 seats in a row which has an aisle on one side only except that for grandstands or bleachers without back rests and with a railing along the front, these figures may be doubled. No aisles will be required for such grandstands or bleachers where the seats extend to the floor or ground without a railing along the front.

(a) The number of seats in a row may be increased to 100 where self-raising seats are provided which leave an unobstructed passageway between rows of not less than 18 inches in width leading to a side aisle on each side of the auditorium in which exit doorways are located at not more than 20 feet intervals to an exit corridor or exit court.

(4) No seat bench or platform on which seats are placed shall be more than 22 inches in height of riser.

(5) No seat bench, or other platform or floor area on which seats are placed, or the top seat of any bleachers shall be nearer to the ceiling than 8 feet, nor nearer to the bottom of any truss or girder than 6 feet 4 inches.

(6) The requirements of this section do not apply to restaurants, dining or dance halls.

History: 1-2-58; am. Register, January, 1961, No. 81, eff. 2-1-61.

Ind 55.14 Width of aisles. (1) Aisles having seats on both sides shall not be less than 2 feet 10 inches wide at the beginning and shall increase in width toward the exits at the rate of ½ inch per foot of run; or the aisle may have a uniform width not less than the average width of the foregoing calculation. No wall aisle shall be less than 3 feet wide and no other straight aisle shall be less than 3 feet 6 inches wide.

(2) There shall be a cross aisle leading to each required side exit. Cross aisles shall not be less than 6 feet 8 inches back to back of adjacent rows of seats.

Ind 55.15 Lobbies and foyers. The width of lobbies and foyers shall be determined on the same basis as required for exits in section Ind 55.12, but shall in no case be less than 5 feet wide, and shall be so designed and apportioned as to prevent congestion and confusion. Lobbies and foyers which serve as means of egress shall be at least equal in combined width to the required width of the stairways, passageways, aisles or exit doorways leading to them.

Ind 55.16 Inclines and aisle steps. (1) To overcome any difference in level between courts, corridors, lobbies, passageways or aisles required, or used, in egress from a theater or an assembly hall, approved ramps as specified in section Ind 55.08 shall be employed where the difference in elevation does not exceed 3 feet, except that this requirement need not apply to balconies.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Theaters, assembly halls

(2) Steps in balcony aisles shall extend the full width of the aisle and shall have a uniform rise and run as specified in section Ind 55.08. No handrails will be required.

Ind 55.17 Obstruction. (1) All lobbies, aisles, passageways and doorways shall be kept free from furniture, drapes, display equipment, merchandise, vending machines and other obstructions, and no person except an employee shall be allowed to stand in or occupy, any of the aisles, passageways, corridors or lobbies during any performance or public gathering. Except that patrons may be allowed to wait in a lobby or similar space if such use does not encroach upon the required clear width of the exits. Such waiting shall be restricted to areas separated from the required exit ways by fixed railings not less than 42 inches high. In entrance lobbies only, the exit space may be divided by railings not less than 36 inches high set up in the direction of travel in an approved manner for the regulation of ingress and egress.

(2) A booth or counter for the sale of package merchandise may be placed in the lobby or foyer of a theater where there is sufficient excess space so that the front of the booth or counter can be located not less than 5 feet back of the line marking the width of the lobby or foyer required for exit purposes.

Ind 55.18 Mirrors and false openings. (1) No mirror shall be placed in any part of a theater or assembly hall used by the public for exit purposes, including lobbies, corridors, stairways, ramps or any other exit facility. Where a mirror is used in an auditorium, it shall be placed flush with the wall and with the bottom at least 7 feet above any floor, balcony, gallery or platform.

(2) No false opening or decorative device giving the appearance of a door or window, where none exists, shall be placed in any part of a theater or assembly hall used by the public.

Ind 55.19 Decorations. Fabric decorations used in theaters and assembly halls shall be flame proof.

Ind 55.20 Elevator and vent shafts. Enclosures for elevator and vent shafts shall be of 2-hour fire-resistive construction as specified in section Ind 51.04 and all openings therein protected by fire-resistive doors or windows as specified in section Ind 51.04.

History: 1-2-56; am. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. eff. 8-1-71 and exp. 1-1-72; cr. eff. 1-1-72. Register, July, 1971, No. 187.

Ind 55.21 Stage separation. (1) In every theater and assembly hall the stage shall be completely separated from the auditorium by a proscenium wall of 4-hour fire-resistive construction as specified in section Ind 51.04, except as follows:

(a) In theaters and assembly halls having a capacity not exceeding 500 persons, the proscenium wall shall be of 2-hour fire-resistive construction as specified in section Ind 51.04, or better.

(b) In theaters and assembly halls an open stage or platform will be permitted without the proscenium wall separation from the auditorium.

Register, December, 1973, No. 278
Building and heating, ventilating and air conditioning code
provided the stage or platform is not more than 6 feet higher or wider than the proscenium opening.

History: 1-2-58; am. (1) intro par. and (1) (a). Register, February, 1971, No. 182, eff. 7-1-71; r. and re enr. (1) intro. par. and (a), eff. 8-1-71 and exp. 1-1-72, and r. (a) intro. par. and (a), eff. 1-1-72, Register, July, 1971, No. 187.

Ind 55.22 Proscenium wall. (1) The proscenium wall shall extend from an incombustible foundation, or from the lowest fireproof floor below the stage floor, to the highest adjoining roof, except that where a 4-hour fire-resistive wall is required it shall extend at least 2 feet above the highest adjoining roof.

(2) There shall be not more than 2 openings in the proscenium wall below the level of the auditorium floor, and not more than 2 openings other than the proscenium opening, in the proscenium wall above the level of the auditorium floor, except that in addition to the above openings there may be one opening to provide access through the proscenium wall to the orchestra pit.

(3) Each such opening shall not exceed 21 square feet in area and shall be protected by a fire-resistant door as specified in section Ind 51.047.

History: 1-2-58; am. (3), Register, March, 1972, No. 134h, eff. 4-1-72.

Ind 55.23 Proscenium curtain. Where a proscenium wall is required for the separation of a stage from an auditorium, the proscenium opening shall be provided with a curtain as approved by the department.

Note: The department will accept standards for the design and installation of “Proscenium Curtains” as specified in the 1970 edition of the “Uniform Building Code” published by the International Conference of Building Officials.

History: 1-2-61; r. and re enr. Register, May, 1971, No. 165, eff. 9-1-71.

Ind 55.24 Automatic smoke outlet. Where a fireproof proscenium curtain is required, or provided, the stage shall be provided with one or more automatic smoke outlets, constructed of metal or other incombustible material, placed near the center and above the highest part of the stage, and having a combined area equal to not less than 8% of the area of the stage floor. Vertical louver openings shall be placed not less than 3 feet above the roof and shall be not less than twice the area of the shaft. The smoke outlet shall be designed and constructed so as to open by gravity, and so as to effectively overcome the effects of neglect, rust, dirt, frost, snow, heat, twisting, or warping of the frame work. The louvers, or dampers in the openings shall be held closed by cotton or hemp cords running to the stage floor close to each stage door. Fusible links, or other approved heat release devices, shall be inserted in each cord near the outlets.

Ind 55.25 Stage vestibules. All entrances to the stage shall be vestibuled in such manner as to protect the curtain, scenery, and auditorium from drafts of air.

Ind 55.26 Footlight trough. The footlight trough shall be made of, or lined with, incombustible material.

Register, December, 1972, No. 273
Building and heating, ventilating and air conditioning code
**DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS**

Theaters, assembly halls

**Ind 55.27 Fireproof paint.** All stage scenery, properties, curtains, and decorations made of combustible material, and all woodwork in or about the stage, shall be effectively flame-proofed.

**Ind 55.28 Stage accessory rooms.** (1) All dressing rooms, property rooms, and other storage or workrooms shall be built of incombustible material throughout, and shall be separated from the stage by a special occupancy separation as specified in Wis. Adm. Code section Ind 51.08.

(2) No dressing room or employees' room shall be placed more than one story below the grade line, and no dressing room shall be placed above or below the auditorium unless separated therefrom by a special occupancy separation as specified in section Ind 51.08.

**Ind 55.29 Boiler and furnace rooms.** (1) Every boiler or furnace room, including the breeching and fuel room, shall be enclosed with a 3-hour fire-resistive enclosure as specified in section Ind 51.04, except that in case of an assembly hall accommodating not more than 300 persons, a 2-hour fire-resistive enclosure as specified in section Ind 51.04 may be used. All openings shall be protected with self-closing fire-resistive doors as specified in section Ind 51.047.

(2) All appliances used for heating water which are fired with solid fuel, liquid fuel or gas shall be located in a boiler or furnace room except that gas fired booster water heaters used exclusively for sanitizing dishes and cooking utensils need not be installed in a fire-resistive enclosure.

**History:** 1-2-00; r. and recr. (2), Register, August, 1937, No. 20, eff. 9-1-57; am. (1), Register, September, 1939, No. 40, eff. 10-1-68; am. (1), Register, February, 1971, No. 152, eff. 7-1-71; r. and recr. (1), eff. 8-1-71, and exp. 1-1-72; cr. (1) eff. 1-1-72, Register, July, 1971, No. 187.

**Ind 55.30 Lights and lighting.** (1) Electric lights shall be used for lighting where electric current is available. No oil lamps or other open lights shall be used in or about any stage containing scenery.

(2) No gas lighting of any kind shall be used on any stage containing scenery, nor in any property room, storage room, scene dock, or fly gallery, except in localities where electricity is not available.

(3) In all theaters and assembly halls, all stairways, passageways, and exit doors shall be properly lighted and shall remain lighted throughout every performance or entertainment and until the audience has left the building.

**55.32 Sanitary facilities.** (1) TOILET ROOMS. All occupancies included under the scope of this chapter shall be provided with separate toilet rooms for each sex. Separate toilet rooms for the employees and the general public need not be provided if the toilet rooms are accessible to both the employees and the general public.

(a) **Toilet rooms in connection with stage.** In theaters and assembly halls which are equipped for the showing of stage productions, separate toilet rooms for each sex, furnished with at least one water closet and one lavatory, shall be provided in connection with the stage.

(b) **Toilet room in connection with motion picture booth.** In theaters where motion picture machines are run continuously for a period of
en face to each other.

Wisconsin Administrative Code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Theaters, assembly halls

an approved automatic sprinkler system is installed. First-aid stand-pipes shall also be provided on the stage of every theater and assembly hall where a fire curtain is required.

History: 1-2-56; r. and reg. Register, December, 1976, No. 262, eff. 1-1-77; r. and rev. eff. 1-1-79.

Ind 55.34 Fire extinguishers. (1) Standard fire extinguishers of an appropriate type as specified in section Ind 51.22 shall be provided for all theaters and assembly halls as follows:

(a) Two on stage, if scenery is used.

(b) One on stage, if no scenery is used.

(c) One in motion picture booth, or in ticket office if there is no booth.

(d) One in dressing room section.

(2) Extinguishers shall be properly exposed to view and always accessible.

Ind 55.35 Automatic sprinklers. In every theater and assembly hall where a proscenium curtain is required, approved automatic sprinklers, as specified in section Ind 51.23, shall be provided under the stage, under the stage roof, and in the dressing rooms, but not in the automatic smoke outlet.

Ind 55.39 Use of "safety-base" film. (1) The requirements of sections Ind 55.40 through 55.49 will not apply in buildings in which motion projectors are used with "safety-base" film provided the conditions of (a) and (b) in this subsection are met.

(a) The owner shall submit an affidavit to the department of industry, labor and human relations stating that "safety-base" film only will be used in all movie projectors.

(b) The affidavit shall be signed by the owner and the signature notarized.

Note: For definition of "owner," see s. 104.01 (2) 60, Stats.

History: cr. Register, April, 1971, No. 104, eff. 5-1-71.

Ind 55.40 Motion picture machine booths, general. Every motion picture machine using nitro-cellulose film, together with all auxiliary and associated equipment, shall be enclosed in a booth so arranged as to permit the operator to walk freely on either side and in back of the machine. At least 48 square feet in area shall be provided for one machine, and 24 square feet additional for each machine over one. The ceiling height shall be not less than 7 feet.

Ind 55.41 Construction of booth. The floor of each motion picture booth shall be constructed of masonry or reinforced concrete, or shall be covered with not less than 2 inches of fire-resistant material. The walls and ceilings shall be not less than 2-hour fire-resistive construction as specified in section Ind 51.04.

History: 1-2-56; r. and reg. Register, February, 1971, No. 182, eff. 7-1-71; r. and rev. eff. 8-1-71 and exp. 1-1-72; cr. eff. 1-1-72. Register, July, 1971, No. 187.
Ind 55.42 Doors. (1) The door to the booth shall be not larger than necessary for the safe and proper use and maintenance of the booth and equipment, but in no case shall its dimensions be smaller than 2 feet by 5 feet or larger than 3 feet by 7 feet. The top of the door shall be not less than 12 inches below the ceiling of the booth.

(2) The door shall be a tight-fitting self-closing fire door as specified in section Ind 61.047, shall open outwardly, and shall not be equipped with any latch.

History: 1-2-66; r. and recr. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (2) eff. 8-1-71 and exp. 1-1-72; r. (2) eff. 1-1-72, Register, July, 1971, No. 187.

Ind 55.43 Openings. (1) Two openings for each motion picture machine may be provided: The one for the operator's view shall not be larger than 200 square inches and the one for projection not larger than 120 square inches. Where separate stereopticon, spot, or floodlight machines are installed, not more than one opening shall be provided for each such machine for both the operator's view and the projection of light. All such openings shall be as small as practicable.

(2) Each opening shall be provided with an approved gravity shutter set into guides not less than one inch at sides and bottom, and overlapping the top of the opening by at least one inch when closed. Shutters shall be not less than No. 10 U.S. Standard gauge iron or equivalent, arranged to move freely in guides of like material and thickness bolted to the wall. Each shutter shall be suspended by a cord and shall be so arranged that closing is by gravity action. A fusible link shall be provided in the cord over each shutter. A link shall also be provided over each magazine, which on operating will close all shutters. A manual release shall be provided near each exit door by which all shutters can be closed simultaneously. Shutters shall not be blocked open nor held open in any manner except by the harness of cords and links as herein described.

Ind 55.44 Ventilation of booths. Every booth or room housing projection, sound or any other equipment which vitiated good air conditions or requires the attention of an attendant shall be ventilated as required by section Ind 64.05. Fresh air intakes in booth walls, except for outside air, shall not exceed 72 square inches in area, nor be more than 3 inches above the floor. They shall be equipped with automatic shutters as described for projection openings.

History: 1-2-66; r. and recr. Register, October, 1967, No. 142, eff. 11-1-67; r. and recr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 55.45 Relief outlets. Every booth or room housing projection, sound or other equipment which constitutes a fire, smoke, explosion or fuming hazard shall be equipped with one or more gravity outlets extending upward from the ceiling through the roof. The net area of such gravity relief outlets shall be equal to one per cent of the room or booth floor area, but not less than 12 inches in diameter. Such outlets shall be constructed as sheet metal ducts having double walls with |/ inch air space between, or better construction. Where a relief outlet passes through, or is within 18 inches of any combustible construction, or passes through any other occupancy, approved masonry flues as specified for chimneys, section Ind 64.46, shall be used. The relief outlets shall be equipped, at the booth or room outlets, with a gravity shutter.
which will open automatically under excessive heat conditions. The automatic shutter shall normally be tightly closed where mechanical exhaust ventilation is required in the same room.

**Ind 55.46 Electric wiring.** All lights and electric wiring, also motors, arc lamps, rheostats, and associated electrical equipment shall conform in type and arrangement to the requirements of the Wisconsin state electrical code.

**Ind 55.47 Motion picture machine.** Every projection machine shall be securely fastened to the floor, and together with sound head and other associated equipment, shall be of safe design. No part of the film shall be outside of a tight metal enclosure during projection, and the feed and take-up reels shall have riveted, flanged, or welded joints. A shutter shall be placed in front of the condenser, arranged so as to be closed except when held open by the operator, or by some mechanical device which will assure immediate closure when operation of the machine is stopped.

**Ind 55.48 Fire protection in booth; care and use of film**

(1) All shelves, furniture and fixtures shall be incombustible. No combustible material shall be permitted to be within such booth, except films and film cement not exceeding one pint. Smoking is prohibited. Heating equipment in booths shall be limited to steam, warm air, hot water or electric convection heaters with low surface temperature elements. Radiators shall be protected by 1/4 inch mesh screen with the top sloped at least 45 degrees to the horizontal.

(2) Films not in process of rewinding, examination or projection shall be kept in metal containers. Up to 40 pounds of film may be kept in the projection booth in interstate commerce commission shipping containers. Excess over 40 pounds shall be kept in an approved film cabinet, but the total quantity of film in any booth shall not exceed 125 pounds.

(3) Rewinding in the projection booth is prohibited unless done in an approved enclosed type rewind machine. An approved can with self-closing hinged cover shall be provided for scrap film.

(4) Up to 125 pounds of film in addition to that permitted in a projection booth, may be kept in containers as specified above, providing this excess is in a rewind room of not less than 80 square feet area, and of the construction specified in sections Ind 55.41 and Ind 55.42. Such room shall have a vent of at least 60 square inches area extending upward to the outside of the building, with a clearance to combustible material conforming to section Ind 55.45. Furniture and heating shall be as for the projection booth, and smoking is prohibited.

*Note: In the foregoing section the weight of a 1000 foot roll of 35 millimeter film is assumed as 5 pounds.*

**Ind 55.49 Portable booths.**

(1) Every portable booth used to confine the fire hazards of a motion picture machine shall be of approved design conforming to the requirements for permanent booths.

(2) Every booth used for more than 3 consecutive performances in one location will be considered a permanent booth.
Ind 55.50 Maintenance. All theaters and assembly halls, and all parts thereof, shall be kept clean, sanitary and in good repair.

Ind 55.51 Grandstands. (1) Grandstands erected of frame construction shall be located at least 20 feet from any other building or adjoining property line unless the exterior walls of such adjacent building are of 2-hour fire-resistant construction or better and all openings therein are protected with fire-resistant doors and windows as specified in section Ind 51.047.

(2) No wood grandstand unit shall exceed 10,000 square feet in ground area or 200 feet in length.

(3) Wood grandstand units shall be placed not less than 20 feet apart or shall be separated by walls of not less than 2-hour fire-resistant construction.

(4) The highest level of seat platforms of any wood grandstands shall not be more than 20 feet. Portable grandstands or bleachers within tents shall not be more than 12 feet above the ground or surface at the front of the grandstand.

(5) All grandstands shall be designed and constructed to conform with the structural requirements of chapter Ind 53 of this code.

(6) Seat boards and foot boards shall be designed to safely support a live load of not less than 120 pounds per linear foot. The width of foot boards shall not be less than 7½ inches.

(7) The space under a grandstand shall be kept free from extraneous flammable materials and shall not be occupied for other than exit purposes except that such space, if enclosed with one-hour fire-resistant construction or better, may be used for non-hazardous purposes if approved in writing by the department of industry, labor and human relations.

Ind 55.52 Exits. (1) Every grandstand, balcony or tier considered separately shall be provided with at least 2 exits located as remotely from each other as practicable and leading directly to the outside at grade. If the capacity of any such structure, balcony or tier exceeds 1,000 persons, there shall be at least 3 exits and where the capacity exceeds 4,000 persons, there shall be at least 4 exits.

(2) Exits shall be distributed uniformly to prevent congestion and shall be so located that the line of travel to an exit or to the entrance to an exit passageway is not greater than 150 feet.

(3) The total width of exits from any grandstand, balcony or tier shall not be less than 22 inches per 100 persons, except that for grandstands which are constructed of incombustible material throughout and have a closed incombustible deck under the seats, the total width of exits may be not less than 22 inches for each 500 persons or fraction.

Ind 55.53 Aisles and passageways. (1) All ramps, stairs, doorways and doors used for exit purposes shall conform to the requirements of sections Ind 55.08, 55.09 and 55.10 of this code.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 179
Theaters, assembly halls

(2) Aisles having seats on both sides shall not be less than 3 feet 6 inches in width and aisles having seats on one side only shall not be less than 24 inches wide. Cross aisles shall not be less than 48 inches in width. No aisles will be required for grandstands or bleachers where the seats extend to the floor or to the ground without a railing along the front.

(3) Trailer seating mounted on incombustible decking not exceeding 300 capacity each shall be provided with aisles or stairways not less than 36 inches in width.

Ind 55.54 Seating. (1) The seating arrangement shall comply with the requirements of section Ind 55.13 except that for seats without backs the horizontal distance from back to back of seats shall not be less than 22 inches. There shall be a space of not less than 12 inches between the back of each seat and the front of the seat immediately behind it. All measurement is to be taken between plumb lines.

(2) Where the same level is not used for both seat bench and foot rest, independent foot rests shall be provided.

(3) All seat boards and foot boards shall be securely fastened in place in such a manner that they cannot be accidentally displaced.

(4) Where the rise of a seat bench or platform exceeds 11 inches, intermediate steps shall be provided the full width of the aisles. Such steps shall have a rise of not more than 11 inches and a tread of not less than 10 inches nominal width. In no case shall the angle of seating exceed 45°.

Ind 55.55 Guard rails. A substantial guard rail not less than 42 inches in height and having 2 intermediate rails shall be provided along the back and ends of all grandstands where the seats are more than 4 feet above the ground. Where the front foot rest of any grandstand is more than 2 feet above the ground, a guard rail extending not less than 36 inches above such front foot rest shall be provided.

Ind 55.56 Portable grandstands or bleachers. (1) Portable grandstands or bleachers shall be self-contained units having all necessary parts to withstand and restrain all forces which may be developed during occupancy. They shall be so designed and constructed that if any structural member essential to the strength and stability of the structure is omitted during erection, the presence of unused connections or fittings will make the omission self-evident.

(2) A portable grandstand shall not be used for public occupancy until it has been securely assembled in accordance with this requirement.

(3) Portable grandstands shall be provided with base plates, sills, floor runners, or sleepers of sufficient area and strength to support safely the total live and dead loads.

(4) Where portable grandstands rest directly on the ground, mud sills of suitable material and having sufficient area to prevent dangerous settlement shall be provided under the base plates or sleepers. All mud sills shall be properly anchored to the ground and all bearing surfaces shall be in contact.
(5) A-frames or other supports and seat stringers for portable grandstands or bleachers shall be secured to prevent accidental displacement during occupancy.

(6) Field connections to wood members shall be by means of rivets, bolts, connectors, lag screws, friction or other approved devices. Lag screws shall not be used for direct tension. The use of nails and wood screws is permissible for holding wood posts together except that they shall not be used for demountable connections.

(7) Wood members in tension shall be connected at each end by not less than 2 bolts or lag screws or by approved connectors or other approved devices. Adequate provision shall be made to prevent the splitting or shearing of wood at such connections.

(8) The following requirements shall apply to folding and movable bleachers used in places of assembly in addition to the other requirements of sections Ind 56.55 and Ind 56.57.

(a) Shop drawings, specifications and calculations or a test report made by a recognized testing agency covering each bleacher model shall be submitted to the department of industry, labor and human relations by an architect or professional engineer registered in Wisconsin, for approval.

(b) No required exit doors or exit passageways shall be obstructed by any bleacher installation. Floor plans, elevations, and typical structural information showing the location of bleachers, exit doors, and exit passageways, for each installation shall be submitted to the department of industry, labor and human relations in triplicate for approval before work on the installation is commenced. The plans shall be made by and bear the seal of an architect or professional engineer registered in Wisconsin.

(c) All bleachers shall be designed to resist a horizontal swaying force applied to the seats in a direction parallel to the length of the seats of at least 24 pounds per linear foot of seats and in a direction perpendicular to the seats of not less than 10 pounds per linear foot of seats.

(d) Seat board and foot boards shall be designed to safely support a live load of not less than 120 pounds per linear foot.

(e) All bleachers shall be equipped with sockets or holders along the back and ends to support guard rails. A guard rail not less than 42 inches in height and having 2 intermediate rails shall be provided along the back of the top row of seats. Guard rails not less than 42 inches in height above foot boards and having an intermediate rail at mid-height shall be provided at the open end of all bleachers where the seats are more than 4 feet above the floor.

(f) The highest level of seat platforms of any forward folding or movable bleachers shall not be more than 12 rows or 11 feet above the floor.

(g) Forward folding bleachers shall be securely anchored to the floor with bolts, lag screws, or other approved devices.

**History:** 1-2-66; cr. (9), Register, November, 1968, No. 96, eff. 12-1-66.

Register, December, 1973, No. 378
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Théaters, assembly halls

Ind 55.57 Inspection. Every portable grandstand or bleacher shall be carefully inspected by a building official before each period of public occupancy and any loose connections, defective or broken members or loose supports shall be properly repaired before the structure is used. In cities or towns which do not have a building official, such inspections shall be made by the chief of the fire department or other public official designated by the department of industry, labor and human relations.

Ind 55.58 Tents. (1) For the purpose of this section a tent is a portable, temporary shelter or a structure, the covering of which is made of pliable material.

(2) No tent shall be erected to cover more than 75% of the premises on which it is located.

(3) Tents used for assembly purposes which cover 1500 square feet or more of ground area shall be located at least 20 feet from any other structure or adjoining property lines.

(4) Stake lines of adjacent tents used for assembly purposes shall be sufficient distance from each other to provide an emergency exit passageway not less than 6 feet in width between stake lines. Proper protection shall be provided along such stake lines to eliminate tripping hazards.

(5) Concession and other tents not used for assembly purposes need not be separated from each other and may be located less than 20 feet from other structures.

(6) This section does not apply to tents or shelters used exclusively for construction purposes.

Ind 55.59 Structural requirements. (1) Poles and other members supporting tents shall be of sufficient size and strength to support the structure safely without exceeding the stresses specified in chapter Ind 53 of this code.

(2) All tents shall be adequately guyed, supported and braced to withstand a wind pressure or suction of not less than 10 pounds per square foot.

(3) The poles, guys, stakes, fastening, etc., shall be of sufficient strength and so attached as to resist a wind pressure of at least 20 pounds per square foot of projected area of the tent.

Ind 55.60 Flame resistance. All tents used for assembly purposes or in which animals are stabled and all other tents used by the public in places of outdoor assembly shall be effectively flame-proofed. The owner shall furnish a certificate or a test report by a recognized testing engineer or laboratory as evidence that such tents have the required flame resistance.

Ind 55.61 Fire hazards. (1) The ground enclosed by any tent used in connection with a place of outdoor assembly and for a distance of not less than 10 feet outside such structure on all sides shall be cleared of all flammable material or vegetation which will transmit fire. The premises shall be kept free from such flammable material during the period the premises are used by the public.
(2) No hay, straw, shavings or similar combustible materials other than that necessary for the current feeding and care of animals shall be permitted within any tents used for public assembly except that saw-dust and shavings be used if kept damp.

(3) No smoking or unapproved open flame of any kind shall be permitted in any tent while occupied by the public. "No Smoking" signs shall be conspicuously posted in all tents open to the public.

(4) Tents shall not be used for motion picture performances unless safety film is used.

**Ind 55.62 Exits.** (1) Every tent occupied by the public shall have at least 2 standard exits located at or near opposite ends of the structure.

(2) In tents used for assembly purposes, exits shall be provided on 3 sides if the capacity exceeds 600 persons and on 4 sides where the capacity exceeds 1,000 persons. Exits shall be uniformly distributed but in no case shall the line of travel to an exit be greater than 150 feet.

(3) The total width of exits from a tent used for assembly purposes shall not be less than 44 inches per 100 persons. Exit openings shall comply in all respects with the requirements of Wis. Adm. Code sections Ind 55.10 and Ind 51.15 of this code.

**Ind 55.63 Electrical Installations.** (1) Electrical systems in all places of outdoor assembly shall be installed in accordance with the requirements of the Wisconsin state electrical code. All such systems shall be maintained and operated in a safe and workmanlike manner.

(2) The electrical system and equipment shall be isolated from the public by proper elevation and guarding. All electrical fuses and switches shall be installed in approved enclosures. Cables laid on the ground or in areas traversed by the public shall be placed in trenches or protected by approved covers.

**Ind 55.64 Fire extinguishing equipment.** One or more fire extinguishers of approved type and size shall be provided in connection with every wood grandstand and in all tents used for assembly purposes. Such extinguishers shall be maintained in proper working order and shall be located where they are easily accessible, preferably in or near the ticket office. In large installations, additional fire extinguishing equipment shall be provided as directed by the building official.

**Ind 55.65 Illumination; exit lights and signs.** (1) All exits, aisles and passageways leading to exits in grandstands and other places of outdoor assembly shall be kept adequately lighted at all times when the structure is occupied by the public. Artificial illumination having an intensity of not less than 2.5 foot candles at the floor line shall be provided when natural light is inadequate.

(2) Exit lights and signs complying with the requirements of section Ind 55.11 shall be provided in all places of outdoor assembly where more than 100 persons can be accommodated.

**Ind 55.66 Boiler and furnace room.** Every boiler or furnace room, including the breeching and fuel room, in places of outdoor assembly, shall be enclosed with a 2-hour fire-resistive enclosure or better and all
interior openings in walls forming such enclosures shall be protected by self closing fire resistive doors. Gas-fired appliances for heating water shall be installed in a boiler or furnace room. Chimneys shall be constructed in conformity with the requirements of section Ind 64.46 of this code.

Ind 55.67 Toilet facilities. Separate toilets shall be provided for each sex in connection with all places of outdoor assembly. Toilet rooms and equipment shall comply in all respects with the requirements of sections Ind 52.50-Ind 52.64, inclusive, of this code.

Ind 55.68 Outdoor theaters. (1) Definition and scope. For the purpose of this code, an outdoor theater is a place of outdoor assembly used for the showing of plays, operas, motion pictures and similar forms of entertainment in which the audience views the performance from self-propelled vehicles parked within the theater enclosure. The requirements of this section shall apply to outdoor theaters now in existence and to outdoor theaters hereafter constructed, except as provided in subsection (5).

(2) Entrances and exits. All entrances and exits for outdoor theaters shall comply with the regulations of the state highway commission for driveways from property abutting state highways and the following additional requirements:

(a) Not more than one entrance shall be provided for each access road but each such entrance may be divided into 2 roadways and channelized to properly provide for vehicles turning right or left from the highway.

(b) That portion of an entrance or exit lying within the highway right-of-way shall comply with the regulations of the authority in charge of the maintenance of the highway or in the event this authority has no regulation, it shall comply with regulations prescribed by the state highway commission.

(c) Not more than one exit shall be provided for each access highway but such exit may be suitably channelized to provide for right and left turns to the highway, and not more than one traffic lane shall be permitted for each traffic lane on the highway available to vehicles leaving the theater.

(3) Vehicle storage. (a) Sufficient area shall be provided between the highway and the ticket booth to provide storage space for vehicles equal to not less than 10% of the theater capacity. In all cases, sufficient storage space shall be provided so the vehicles will not back up on the traveled way of the highway. Storage area shall be calculated on the basis of 162 square feet per vehicle.

(b) A hold-over storage area having sufficient capacity to accommodate not less than 15% of the theater capacity shall be provided between the ticket booth and the ramp area.

(4) Tower construction. The tower supporting the motion picture screen shall be designed to resist a horizontal wind pressure of not less than 30 pounds for every square foot of exposed surface.
(5) LOCATION OF TOWER. The screen shall be so oriented that the picture is not visible from any major highway. This requirement does not apply to towers erected prior to January 1, 1952.

(6) CONCESSION AND MOTION PICTURE MACHINE BOOTH. The motion picture booth and equipment shall comply in all respects with the requirements of sections Ind 55.40-55.49, inclusive, of this code.

(a) Concession buildings in connection with outdoor theaters shall comply with the requirements of chapter Ind 54 of this code.

(7) SANITARY EQUIPMENT. Separate toilet rooms shall be provided for males and females in connection with all outdoor theaters as required by section Ind 55.32. Toilet rooms and equipment shall comply in all respects with the requirements of sections Ind 52.50-52.64 of this code.

(a) In determining the number of fixtures required for toilet rooms in connection with outdoor theaters, the capacity of the theater is established by allowing 2½ persons for each vehicle accommodated, exclusive of vehicles parked in the waiting or hold-over area.

(b) Where the public toilet rooms are so located that the patrons must cross the ramp area in order to reach the toilet rooms, a suitable approach or passageway leading thereto shall be maintained. Such passageways shall be properly lighted and they shall be kept free from obstructions.

(8) RAMPS AND SPEAKER EQUIPMENT. (a) Ramps shall be spaced not less than 38 feet apart. The ramps shall be so designed that any vehicle can move from its parked position to the exit driveway without being required to back up.

(b) All ramps, parking areas, entrance and exit driveways shall be properly surfaced with a gravel surfacing or better, adequate to withstand the weight of the vehicles accommodated.

(c) Where additional seating space is provided in the theater enclosure for patrons using public transportation facilities, the speaker arrangement shall be such that the sound will be confined to the immediate seating area and not broadcast beyond the theater enclosure.

(d) There shall not be less than 18 feet distance between speaker posts, measured parallel to the ramps, except in seated areas for patrons using public transportation. All electrical wiring and electrical equipment shall be installed in accordance with the provisions of the Wisconsin state electrical code. Each speaker post shall be wired with wire approved for underground use laid in trenches not less than 12 inches in depth.

(9) LIGHTING. All entrance and exit driveways shall be adequately lighted and properly marked to avoid congestion and confusion and shall remain lighted throughout the performance and until the audience has left the area.

(10) SPEED LIMIT. In every outdoor theater, notices of a permanent character shall be prominently displayed designating the maximum speed limit permitted for cars driven within the area. Parking lights shall be used when cars are moving in the theater enclosure.
(11) Running of Engines. At each performance, an instructive trailer shall be shown on the screen informing the patrons of the danger of carbon monoxide poisoning when the engine is running and stating that when it becomes necessary to run the engine, the windows of the vehicle should be opened at least one inch.

Ind 56.001 Scope. The requirements of this chapter, sections Ind 56.001 to Ind 56.20 inclusive, shall apply to all public and private schools, universities, colleges, academies, seminaries, libraries, museums and art galleries, including all buildings or parts of buildings used primarily for instructional purposes.

History: 1-2-56; am. Register, May, 1971, No. 185, eff. 6-1-71; am. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 56.01 Maximum height. (1) Buildings occupied primarily by pupils up to and including grade 12 shall not exceed 4 stories or 48 feet in height.

(a) Exception. Buildings provided with complete automatic sprinkler or automatic smoke detection systems, occupied primarily by students of grades 9 through 12, shall be no more than 6 stories or 72 feet in height.

Note: Also see requirements for classes of construction.

History: 1-2-56; r. Register, May, 1971, No. 185, eff. 6-1-71; r. Register, September, 1973, No. 413, eff. 10-1-73.

Ind 56.02 Classes of construction. (1) Every building not more than one story in height may be of type No. 7 or No. 8 construction as specified in section Ind 51.03.

(2) Every 2-story building shall be not less than type No. 6 construction as specified in section Ind 51.03 with the exception that all floors and their supports shall be at least noncombustible one-hour fire-resistant.
(3) Every building 3 or more stories in height shall be of type No. 1 or No. 2 construction as specified in section Ind 51.04.

(4) Auditoriums, gymnasiums or field houses, or those parts of buildings similarly used, shall comply with the following:

(a) Limitations when occupancy is restricted to first story or ground floor only.

(4), Register, September, 1973, No. 213, eff. 10-1-73; r. and recr. (4) 1) Register, May, 1974, No. 221, eff. 6-1-74; am. (4) (a) 1) Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.04 Subdivisions and fire stops. Every building of this classification which is built in connection with a building of a lower grade of construction shall be separated from such other building by walls of 4-hour fire-resistive construction as specified in section Ind 51.04, and all communicating openings shall be protected by fire-resistive doors as specified in section Ind 51.047 or equal. If such openings are used as a means of egress, they shall be kept normally open during the occupancy of the building.

History: 1-2-58; am. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. eff. 8-1-73 and exp. 1-1-72; cr. eff. 1-1-72, Register, July, 1971, No. 187.

Ind 56.05 Exterior wall openings. (1) One-story buildings with no floor levels below the first floor need not be provided with exterior wall openings other than required exits.

Register, December, 1978, No. 276
Building and heating; ventilating and air conditioning code
(2) Buildings with basements shall at such levels be protected with an approved automatic sprinkler system (Ind 51.23) or an approved automatic smoke detection system, either of which shall be connected to the required fire alarm (Ind 56.19).

Note: See section Ind 51.01 for definitions of "automatic" and "basement."

(3) Buildings more than one story shall be provided with wall openings for emergency purposes above the first story as specified in section Ind 52.02(2) except as follows:

(a) The requirements for wall openings is waived in buildings provided throughout with an approved automatic sprinkler system (Ind 51.23) or an approved automatic smoke detection system, either of which shall be connected to the required fire alarm (Ind 56.19).

History: 1-4-66; am. Register, January, 1961, No. 61, eff. 2-1-61; r. and rev., Register, May, 1971, No. 185, eff. 6-1-71; r. and rev., Register, September, 1973, No. 213, eff. 10-1-73.

Ind 56.06 Exits. (1) TOTAL NUMBER OF EXITS. The total number of exits from each floor level and each building shall be determined on the basis of total aggregate exit width and distances to exit. Each building and each floor level shall be provided with at least 2 exits.

(2) TYPES OF EXITS. At least 2 exits from all floor levels shall lead directly to grade through standard exit doors, stairs, interior enclosed stairs, smokeproof stair towers, fire-rated exit corridors, passageways, or ramps. One-half of the remaining required exits may be horizontal exits or fire escapes. Fire escapes are prohibited as required exits in preschool, elementary, middle, and high schools. In no case will fire escapes be permitted above the second story.

(a) Standard exit doors. Standard exit doors shall be provided in accordance with the requirements of sections Ind 51.15 and Ind 56.08.

(b) Exit stairs. Stairs shall conform to the requirements of section Ind 51.16, except that the stairs shall have a uniform rise of not more than 7 1/2 inches, measured from tread to tread, and a uniform tread of not less than 10 inches, measured from nosing to nosing of tread. Handrails shall be provided on both sides. All stairs serving basements shall be in accordance with the requirements of subsection Ind 51.02(11). No closets or rooms may be placed under a stairway or landing.

(c) Interior enclosed stairs and smokeproof stair towers. Interior stairs and smokeproof stair towers shall be constructed in accordance with the requirements of sections Ind 51.17 and Ind 51.18.

(d) Fire-rated exit corridors. All rated exit corridors required to satisfy limitations on exit distance shall be of not less than one-hour fire-resistive construction, unless the fire-resistive ratings indicated in Table 51.03-A for required exit corridor enclosures are more restrictive.

(e) Exit ramps. The minimum width of exit ramps shall be determined in accordance with the requirements of section Ind 56.07. The minimum width shall be not less than 3 feet 6 inches. Exit ramps, other than those required for the physically disabled, shall have a slope not exceeding 1:8. Ramp slopes exceeding 1:12 shall be provided with handrails. Ramps shall be provided with a slip-resistant finish. Ramps shall be provided from areas noted under section Ind 56.06 (3) (c) involving a
change of elevation between floor levels or platforms not exceeding 3 feet.

(f) Fire escapes. Fire escapes shall be constructed in accordance with the requirements of section 51.20.

(g) Horizontal exits. Horizontal exits shall be constructed in accordance with the requirements of section 51.19 and shall be of at least 4-hour rated construction.

(3) Location of exits. (a) Exit distance. Travel distance to an exterior exit door, a required fire-resistive rated exit corridor, interior enclosed stairs, smokeproof stair tower, horizontal exit, or fire escape, from any point in a building accessible to the public, shall not exceed 150 feet. Building service areas, including pipe chase and tunnels, catwalks, ducts or similar spaces not accessible to the public, shall not exceed 300 feet from an exit.

(b) Distribution of exits. All exits shall be distributed to provide the best possible means of egress. The exits shall be located so that in case any exit is blocked at any point some other exit is accessible through public passageways at all times. Locked security gates and doors shall not be placed so as to block required exit passageways or create dead-end corridors.

(c) Auditorium, gymnasium and field house exits. This rule shall apply only to auditoriums, gymnasiums and field houses which have a capacity exceeding 600 persons. One-half of the required exits shall discharge directly to a street(s), alley(s) or open court(s) connected with a street(s), unless a 2-hour rated exit corridor(s) is provided, wide enough to accommodate one-half of the occupants, which extends from the interior wall of the auditorium, gymnasium or field house to an exterior exit. The remaining required exits shall discharge directly to the exterior or to a public passageway which permits 2 directions of travel to the exits at the exterior of the building. The exiting shall be direct and unobstructed.

(4) Classroom exits. (a) Exits serving 50 persons or less. At least one exit shall be provided from all rooms serving a capacity of 50 persons or less. The exit shall discharge directly to the exterior of the building or to a public passageway which permits 2 directions of travel to the exterior.

(b) Exits serving 51-100 persons. At least 2 exits shall be provided from all rooms serving a capacity of 51-100 persons. One exit shall discharge directly to the exterior of the building or to a public passageway which permits 2 directions of travel to the exterior. One exit may discharge through an adjacent room provided a clear passageway is maintained from the connecting door to a required exit(s) serving the adjacent room.

(c) Exits serving more than 100 persons. At least 2 exits shall be provided from all rooms serving a capacity of more than 100 persons. The exits shall discharge directly to grade or to a public passageway which permits 2 directions of travel to the exterior.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Schools, places of instruction

(5) WIDTH OF EXITS. The total required exit width shall be provided in accordance with the requirements of section Ind 56.07.

(6) EXIT LIGHTS. All required exits indicated in section Ind 56.06 (2), and exits from areas serving a capacity of more than 100 persons, shall be identified by an approved exit light. Directional exit lights shall be provided to direct occupants to an exit. Exit lights and directional exit lights shall be in accordance with the requirements of section Ind 51.15 (5).

History: 1-2-56; am. (1), cr. (1) (a), Register, September, 1959, No. 45, eff. 10-1-59; am. Register, January, 1961, No. 61, eff. 2-1-61; r. and recr. (1) (a), return. Ind 56.07 Required exit width. (1) The total required exit width from a building level shall be in accordance with the requirements of sections Ind 51.15 (6) and Ind 51.16 (3).

(2) The capacity of educational buildings or any individual story or section thereof for the purpose of determining exits shall be the maximum capacity designated on approved plans.

(a) The maximum capacity shall not exceed the requirements of paragraph (b).

(b) The maximum capacities of all rooms and spaces as listed below shall be determined on the basis of the minimum net square feet area per person shown for that occupancy unless otherwise designated on the plans.

History: 1-2-56; r. and recr. (8), Register, May, 1971, No. 185, eff. 6-1-71; am. (1), Register, June, 1972, No. 198, eff. 1-1-73; r. and recr., Register, September, 1973, No. 212, eff. 10-1-73; r. and recr. (1) (a), return. (3), (3) to be (4), (4) to be (5), (5) to be (6) and (6) to be (7), and cr. (2) and (6), Register, December, 1974, No. 226, eff. 1-1-76.
Ind 56.08 Exit doors. (1) Standard exit doors. Exit doors shall comply with the requirements of section Ind 51.15, except that in elementary schools the width may be reduced to 3 feet. The aggregate width of exit doors shall be as required in section Ind 56.07. No single door or leaf of a double door shall be more than 42 inches wide.

(2) Classroom exit door width and swing. (a) Classroom doors serving 50 persons or less. Classroom doors serving classrooms with a capacity of 60 persons or less shall be not less than 3 feet 0 inches in width. The doors may swing into the classroom.

(b) Classroom doors serving a capacity of 51-100 persons. Classroom doors serving classrooms with a capacity of 51 to 100 persons shall be not less than 3 feet 0 inches in width and shall swing outward toward the means of egress.

c) Classroom doors serving more than 100 persons. Classroom doors serving classrooms with a capacity of more than 100 persons shall be standard exit doors and shall swing outward toward the means of egress.

(3) All other exit doors. Doors serving areas other than classrooms shall comply with section Ind 54.06.

Ind 56.09 Passageways. (1) The minimum unobstructed width of corridors and passageways which are used by the public or by the occupants generally, shall be determined in the same manner as specified for stairways in section Ind 56.07, but in no case shall this width be less than 4 feet. Corridors and passageways serving as means of egress shall be at least equal in combined width to the required width of the stairways or passageways leading to them.

Ind 58.13 Auditoriums, gymnasiums and field houses. (1) Auditoriums, gymnasiums, field houses and other large group occupancy areas shall comply with the requirements of chapter 56. Where any area of building in this category has a stage loft in excess of 25° 0" in height above the stage floor and is equipped with permanent or movable scenery, it shall comply with sections Ind 55.21 to 55.24 inclusive.

Note: It is the intent to differentiate between a theatre and an auditorium, gymnasium, field house or other large group occupancy area.

(2) Seating. (a) All seats, chairs and benches shall be placed so as to provide a minimum unobstructed passage of 12 inches measured horizontally between plumb lines at the farthest projection of the back of one seat and the front of seat immediately behind.

Note: 1. Above measurements are relative to the furthest projection when seat is in its normal unseated position such as self-rising seat. 2. See allowable occupant space capacity under section Ind 56.07 (2) (b). For exception see Ind 50.15 (2) (b) 3.

(b) The maximum number of seats in a row. 1. With aisles on both sides of row the maximum number of seats shall be 14.

2. With an aisle on only one end of row the maximum number of seats shall be 7.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Schools, places of instruction

3. The number of seats in a row may be increased to 100 where:

a. A minimum unobstructed passage of 18 inches between rows of seats measured horizontally between plumb lines at the farthest projection of the back of one seat and the front of seat immediately behind.

Note: For measurements see "Note No. 1" under Ind 56.12 (2) (a).

b. The unobstructed passage between rows leads to a side aisle on each end of row where exit doors are located at no more than 20 feet intervals leading to an exit corridor or exit court.

c. No platform on which seats are placed shall be more than 22 inches in height of riser.

d. The highest level of any floor or platform whether level, tiered or sloped, shall provide no less than 7 feet vertical clearance between floor and any ceiling construction or projection beneath the ceiling.

3) Width of aisles. (a) Aisles having seats on both sides shall not be less than 2 feet 10 inches wide at the beginning and shall increase in width toward the exits at the rate of 1/4 inch per foot of run; or the aisle may have a uniform width not less than the average width of the foregoing calculation. No wall aisle shall be less than 3 feet wide and no other straight aisle shall be less than 3 feet 6 inches wide.

(b) There shall be a cross aisle leading to each required side exit. Cross aisles shall not be less than 6 feet 8 inches back to back of adjacent rows of seats.

History: 1-2-56; c. and recr., Register, May, 1971, No. 185, eff. 6-1-71.

Ind 56.14 Seats, desks and aisles. (1) Seats, desks, tables and other loose equipment need not be fastened to the floor or to each other provided that any seating arrangement used, will maintain during occupancy, free and unobstructed intermediate, cross and wall aisles leading to the exit.

(a) Stepped floors or tiered platforms shall be no less than 48 inches in width to permit the above arrangement.

(b) Seats, desks, tables and other loose equipment used in instructional occupancies shall be of a durable type of construction to assure safety and stability.

History: 1-2-60; c. and recr., Register, May, 1971, No. 165, eff. 6-1-71.

Ind 56.15 Heating plants. (1) In every building more than one story in height, all heating plants and fuel rooms shall be enclosed with not less than 4-hour fire-resistive construction as specified in Wis. Adm. Code section Ind 51.04. All openings shall be protected with self-closing fire-resistive doors as specified in section Ind 51.047.

(2) In one story buildings all heating plants and fuel rooms shall be enclosed with not less than 2-hour fire-resistive construction as specified in section Ind 51.04, except that this requirement shall not apply to buildings where jacketed stoves or school room heaters are permitted.

Register, December, 1978, No. 378
Building and heating, ventilating and air conditioning code
All openings shall be protected by self-closing fire-resistive doors as specified in section Ind 51.047.

History: 1-2-58; am. Register, February, 1971, No. 132, eff. 7-1-71; r. and recr. eff. 8-1-71 and exp. 1-1-79; cr. eff. 1-1-72, Register, July, 1971, No. 147.

Ind 56.16 Sanitary facilities. (1) TOILET ROOMS. Separate toilet rooms for each sex shall be provided for all occupancies included under the scope of this chapter. The toilet rooms shall be completely enclosed and arranged to ensure privacy, except that in elementary schools (kindergarten through grade 8) the doors to the toilet rooms may be eliminated if the entrance to the toilet room is located in the wall of a public corridor.

(2) SANITARY FIXTURES. The following tabulated groups or combinations thereof shall be provided with one fixture of each type in accordance with the ratio given in chart to serve the total number of persons designated on the plans.

Drinking Fountains ............................................. 1 per 6,000 sq. ft. floor area and/or 1 per floor

(a) When fixtures required for a designated group are not available to another designated group the number of fixtures shall be provided according to the ratio indicated in the chart and independent of other group requirements.

(b) Where a theatre is a part of an educational facility the requirements listed under "large group occupancies" shall apply.

History: 1-2-58; am. (2), (3), (4) and (5) (a). Register, September, 1958, No. 45, eff. 10-1-59; r. and recr. (4), inter. par., Register, December, 1967, No. 144, eff. 1-1-68; r. and recr. Register, May 1971, No. 130, eff. 6-1-71; am. (1) (intro.), r. and recr. (4) (a), cr. (41) (b). Register, September, 1973, No. 233, eff. 10-1-73; r. renum. (4) to ho (2) and cr. (1). Register, December, 1976, No. 302, eff. 1-1-77.

Ind 56.17 Lighting. (1) ELECTRIC LIGHTING. Every class, study or recitation room shall be equipped with sufficient electrical lighting units to maintain the illumination required in Wis. Adm. Code chapter Ind 19, Illumination Code.

(2) GENERAL. All other rooms and spaces in school buildings shall be equipped with means for supplying electric illumination in the quantity required for the purpose for which the room or space is used. All electrical work shall be installed to conform to the requirements of the Wisconsin State Electrical Code.

History: 1-2-58; am. Register, January, 1964, No. 81, eff. 2-1-61; cr. (3). Register, November, 1967, No. 95, eff. 12-1-68; am. (3) (c). Register, February, 1971, No. 184, eff. 7-1-71; r. and recr. Register, May, 1971, No. 185, eff. 6-1-71.

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 195

Schools, places of instruction

Ind 56.18 Fire extinguishers. In every building, standard fire extinguishers, as specified in Wis. Adm. Code section Ind 51.22, shall be provided in the proportion of one extinguisher to each 2,500 square feet, or fraction, of floor area, but there shall be at least one fire extinguisher on each floor including basement. In addition to the fire extinguishers for general protection there shall be, at least one extinguisher of appropriate type and size in each laboratory, art, shop or other vocational room. Every fire extinguisher shall be prominently exposed to view and always accessible.

History: 1-2-56; am. Register, May, 1971, No. 185, eff. 6-1-71; am. Register, December, 1975, No. 282, eff. 1-1-77.

Ind 56.19 Fire alarms. Every building shall be provided with a proper alarm system complying with Wis. Adm. Code section Ind 51.24.

History: 1-2-56; am. Register, May, 1971, No. 185, eff. 6-1-71.

Ind 56.20 Standpipes. (1) FIRE DEPARTMENT STANDPIPES. Fire department standpipes shall be provided in all buildings exceeding 60 feet in height.

(2) FIRST-AID STANDPIPES. First-aid standpipes shall be provided in all buildings 3 stories or more in height, unless an approved automatic sprinkler system is installed.

History: Cr. Register, December, 1976, No. 262, eff. 1-1-77.

PART II
RELOCATABLE CLASSROOMS

Ind 56.30 Scope. This part provides the minimum requirements for the design and construction of relocatable classrooms as defined in section Ind 56.31.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.31 Definitions. (1) RELOCATABLE CLASSROOMS. Relocatable classrooms are mobile home type structures located on permanent foundations and equipped and used for educational instruction.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.32 General. Relocatable classrooms shall comply with the applicable sections of this code except as otherwise specified in this part.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.33 Anchoring requirements. Provisions acceptable to the department for the prevention of overturning of the relocatable classroom as a result of wind pressure shall be made.

Note: The department accepts provisions such as ground anchors installed in accordance with ANSI standard A 119.1.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.34 Exit doors and exit lights. (1) EXIT DOORS. Exit doors shall be at least 3 feet 0 inches in width.
(2) Exit lights. Illuminated exit lights are not required in relocatable classrooms.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.35 Subdivisions and fire stops. Relocatable classrooms connected to another building shall be provided with subdivisions and fire stops as specified in section Ind 56.04.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79

Ind 56.36 Barrier-free requirements. Access to, interior circulation and toilet facilities for the physically disabled need not be provided for the relocatable classroom if the course(s) taught in the relocatable classroom are available in accessible facilities at the same school site.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.37 Sanitary fixtures. (1) Sanitary fixtures for relocatable classrooms shall be provided in accordance with the requirements of sections Ind 52.50 through Ind 52.64 and section Ind 56.16.

(a) Exception. Sanitary fixtures within the relocatable classroom structure need not be provided if the sanitary fixtures in the main school building are available for use and the relocatable classroom structure is connected to the main school building with an enclosed passageway.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.38 Fire alarms. Relocatable classroom structures containing more than 2 classrooms or connected to another building shall be provided with a fire alarm system as specified in section Ind 51.24.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

PART III
MOBILE TRAINING UNITS

Ind 56.40 Scope. This part provides the minimum requirements for mobile training units as defined in section Ind 56.41.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.41 Definitions. (1) MOBILE TRAINING UNITS. Mobile training units are trailer type units constructed and left on wheels. Mobile training units are used for education purposes at one site for a period of time no greater than 9 weeks per year.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.42 General. Mobile training units shall comply with the applicable sections of this code except as otherwise specified in this part.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.43 Exit doors and exit lights. (1) EXIT DOORS. Exit doors shall be at least 3 feet 0 inches wide.

(2) EXIT LIGHTS. Illuminated exit lights are not required for mobile training units.

History: Cr. Register, December, 1978, No. 276.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 197
Schools, places of instruction

Ind 56.44 Barrier-free requirements. Access to, interior circulation and toilet facilities for the physically disabled need not be provided for the mobile training units if the course(s) taught in the mobile training units are available in accessible facilities at the same school site.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 56.45 Sanitary fixtures. (1) General exemption. Sanitary fixtures are not required in the mobile training units provided the sanitary fixtures in the main school building are available for use.

(2) General requirements. Toilet rooms within the mobile training unit shall comply with the requirements of sections Ind 52.50 through Ind 52.64 and section Ind 56.16.

(a) Exceptions. 1. The requirements specified in section Ind 52.59 are not applicable provided the toilet room door is equipped with a privacy lock.

2. Accessible toilet facilities for the physically disabled need not be provided if accessible toilet facilities in the main school building are made available.

Ind 56.46 Fire alarms. Mobile training units used individually are exempt from the provisions of section Ind 56.19.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 57.001 Scope.** (1) The requirements of this chapter shall apply to all apartment buildings, row houses, boarding houses, hotels, dormitories, convents, monasteries, hospitals, children's homes, homes for the aged and infirm, nursing homes, convalescent hospitals, convalescent homes, asylums, mental hospitals, jails, and other places of abode or detention, except as provided in section Ind 57.25 (2).

(2) By place of abode is meant a building or part of a building, such as an apartment building, row house, boarding house, hotel, dormitory, convent, hospital, as follows:

(a) Occupied as a residence of 3 or more families living independently or occupied by 2 such families and used also for business purposes, or

(b) Occupied for sleeping or lodging purposes by 3 or more persons not members of the same family.

(3) By place of detention is meant a building or part of a building used as a place of abode and wherein persons are forcibly confined, such as asylums, mental hospitals, and jails.

Note 1: The Attorney General has ruled that all persons committed to an insane asylum by court order come within the meaning of the words "forcibly confined." Also that the words "forcibly confined" apply to all persons confined without their consent.

Note 2: For requirements regarding migrant labor camps see Wis. Adm. Code chapter Ind 40.

**Ind 57.01 Class of construction.** (1) All places of abode which are more than 3 stories in height shall be of type No. 1 or No. 2 construction as specified as in section Ind 51.03.

(2) All 3-story places of abode, other than hospitals and places of detention, shall be at least type No. 3 construction as specified in section Ind 51.03.
(3) All places of detention shall be of type No. 1 or No. 2 construction as specified in section Ind 51.03. All hospitals, convalescent hospitals, and nursing homes 3 or more stories in height shall be of type No. 1 or No. 2 construction as specified in section Ind 51.03.

History: 1-2-56; am. (3), Register, September, 1969, No. 45, eff. 10-1-69; am. (1), (2) and (3), Register, June, 1972, No. 108, eff. 1-1-73.

Ind 57.02 First floor fire-resistive. (1) In 3 story buildings, except those having not more than one family on each floor, the first floor and its supports shall be of not less than 3-hour fire-resistive construction as specified in section Ind 51.04, except that in a 3 story apartment house which will accommodate not more than four families, or a 3 story hotel or rooming house which will accommodate not more than 30 persons, above the first story, the basement ceiling shall be of not less than 1-hour fire-resistive construction as specified in section Ind 51.04 or shall be protected by automatic sprinklers as specified in section Ind 51.23.

(2) Spaces between floor joists, below or above stud partitions where the studs extend through one or more stories, shall be fire-stopped.

History: 1-2-56; am. (1), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. eff. 8-1-71 and exp. 1-1-72, and cr. (1) eff. 1-1-73, Register, July, 1974, No. 187.

Ind 57.03 Garage and business separation. (1) In every building in which a lower story is used for garage purposes, the ceiling over the garage shall be of unperforated 4-hour fire-resistive construction as specified in section Ind 51.043. All stairways and shafts from garages leading to the upper stories shall be separated from the garage area with walls of 4-hour fire-resistive construction as specified in section Ind 51.043, with openings protected as specified for special occupancy separation, section Ind 51.08.

(2) In a building more than 2 stories in height where the lower story is used for business purposes, other than the hazards listed in chapter Ind 57 of this code, the ceiling over the lower story shall be of not less than 1-hour fire-resistive construction as specified in section Ind 51.04.

History: 1-2-56; am. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. eff. 8-1-71 and exp. 1-1-72; cr. eff. 1-1-72, Register, July, 1971, No. 187; am. (1), Register, December, 1976, No. 240, eff. 1-1-78.

Ind 57.04 Corridor and dividing partitions—3-story places of abode. (1) The public passageways shall be enclosed with partitions of not less than one-hour fire-resistive construction as specified in section Ind 51.04 and shall have all living units separated by such partitions, except as follows:

(a) Apartment buildings having one living unit on each floor.

(b) Hotels, motels, hospitals, nursing homes and other similar buildings having not more than 8 habitable rooms on each floor.

(2) Hotels, motels, hospitals, nursing homes and other similar buildings having more than 8 habitable rooms on each floor shall be divided into groups of not more than 8 habitable rooms each, with partitions of not less than one-hour fire-resistive construction as specified in section Ind 51.04.

Register, December, 1976, No. 276
Building and Heating, Ventilating and Air Conditioning Code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Apartment buildings, hotels, places of detention

(3) Corridor and specified dividing partitions shall be provided with 20-minute fire door assemblies, or equivalent.

Note: See Ind 51.047 for standards of 20-minute door assemblies or equivalent.

History: 1-2-59; am. (1), Register, February, 1971, No. 182, eff. 7-1-71; r. and rec. (1) eff. 8-1-71 and exp. 1-1-72; cr. (1) eff. 1-1-72; Register, July, 1971, No. 187; r. and rec. Register, September, 1973, No. 215, eff. 10-1-73; am. (6), Register, December, 1974, No. 228, eff. 1-1-76.

Ind 57.05 Court walls. For walls of courts and similar interior shafts for light and air, see table 51.03-A.

History: 1-2-59; am. (1), Register, February, 1971, No. 182, eff. 7-1-71; r. and rec. eff. 8-1-71 and exp. 1-1-72; cr. eff. 1-1-72; Register, July, 1971, No. 187; am. (6), Register, June, 1972, No. 198, eff. 1-1-73.

Ind 57.06 Yards. (1) Behind every apartment house, the rear of which does not abut on an alley or street, there shall be a yard across the entire width of the lot, open and unobstructed from the ground to the sky. The width of the yard behind a 2 story building shall be either:

(a) At least 5 feet of unobstructed width; or

(b) At least 10 feet from the rear lot line to the building line, of which at least 3 feet shall be unobstructed, and the remainder may be occupied by an open (or screened) porch.

(2) For apartment houses of more than 2 stories, the unobstructed width of the entire yard shall be increased one foot for each additional story, except in the case of corner lots.

(3) No apartment house shall be placed behind any other building unless there is at least 50 feet between the buildings.

Ind 57.07 Number, location and type of exits. (1) There shall be at least 2 exits accessible from each living unit by means of stairways, ramps or horizontal exits. The number and location of such exits shall be such that in case any exit or passageway is blocked at any point, some other exit will still be accessible through public passageways from every living unit.

(a) In type No. 1 and No. 2 buildings a total area of not more than 1,200 square feet may be placed between an exit and the end of the building.

(2) Exits shall be distributed so that the entrance to each living unit will be not more than 50 feet distant from an exit, measuring along public passageways, if in a building of less than type No. 1 or No. 2 construction, or 75 feet in a type No. 1 or No. 2 building.

(3) At least one-half of the required exits, in buildings of more than one story, shall be stairways as specified in section Ind 51.16. The remaining exits shall be either stairways, or horizontal exits; or fire escapes may be used as exits from floors which are not more than 40 feet above grade if they are placed against blank walls. Every building which accommodates more than one family, or 8 persons, above the second story shall have at least 2 stairways.

(a) Exception. A rescue platform (exterior balcony) of combustible construction may be used as a required second exit for 2-story buildings.

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code
of type 5 through type 8 construction, provided the following conditions are satisfied:

1. The exit serves a single living unit;

2. The exit platform is located not more than 10 feet above the adjacent exit discharge grade;

3. The platform area is at least 14 square feet, with a minimum dimension of 3 feet;

4. The platform is designed for 80 pounds per square foot live load plus dead load;

5. Railings are provided in accordance with the provisions of section Ind 51.16 (5);

6. Platforms having solid floors are provided with a roof equal in area to that of the platform;

7. The building is not a hospital, nursing home, residential care institution, group foster home or home for the elderly.

(4) Apartment buildings 3 stories or less in height whose floors and supporting members are of not less than 2-hour fire-resistive construction as specified in section Ind 51.04, and which have a plan so arranged that not more than 2 living units on any floor make use of a common stairway, may be constructed with one common stairway as a single exit, provided the walls between units and those enclosing the stairway are of 2-hour fire-resistive construction as specified in section Ind 51.04. In this case, the stairways must be of not less than 2-hour fire-resistive construction, must lead directly to the outside and have all interior openings protected by approved fire-resistive doors as specified in section Ind 51.047.

(5) Where a jail or other place of detention wherein persons are forcibly confined is located on the upper floors of a court house or office building, at least one of the exits from the jail shall be a separate smoke-proof stair tower loading directly from the jail section to the outside at street grade. This stairway shall serve only the jail area and shall be no doors opening into it from the office or court house section of the building.

(6) Exits serving portions of buildings without sleeping rooms or living units (i.e., hospital and nursing home ancillary areas, basements of apartment buildings, and similar areas) shall comply with the requirements of sections Ind 54.02 through 54.07.

History: 1-2-56; r. and recr. (1), Register, December, 1970, No. 180, eff. 1-1-71; am. (4), Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. (4) eff. 8-1-71 and exp. 1-1-72; eff. (4) eff. 1-1-72, Register, July, 1971, No. 187, am. (1) and recr. (4), Register, June, 1972, No. 198, eff. 1-1-73; am. (1) (intro.), (2) and (4), Register, September, 1973, No. 211, eff. 10-1-73; eff. (3) (a), Register, December, 1977, No. 214, eff. 1-1-78; eff. (4), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 57.08 Required exit width. The total required exit width from a building level shall be in accordance with the requirements of sections Ind 51.15 (6) and Ind 51.16 (3).

History: 1-2-56; am. Register, December, 1974, No. 230, eff. 1-1-75.
**Ind 57.09 Exit doors.** (1) Exit doors shall be as specified in section Ind 51.16, except that a door which is used by not more than 25 persons shall be not less than 3 feet wide and shall not be required to open outward.

(a) *Exception.* Sliding glazed patio-type doors may serve as the second exit from individual living units. The operable leaf of the door shall be located on the interior side of the track. A means to prevent accumulation of snow and ice in the door track or freezing of the door shall be provided.

History: 1-2-58; r. and rev., Register, December, 1977, No. 264, eff. 1-1-78; cr. (1) (a), Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 57.10 Passageways.** Every public passageway leading from an exit shall be at least as wide as the required width of such exit. Every public passageway leading to an exit shall be at least 3 feet wide. The required width shall be kept clear and unobstructed at all times.

**Ind 57.11 Illumination and exit lights.** (1) ILLUMINATION. (a) Buildings having more than 1 living unit accommodating more than 30 persons or accommodating transients shall have public passageways, stairways and exit doors illuminated from one hour after sunset to one hour before sunrise.

(b) The illumination requirements specified in (a) shall be provided at all intersections of passageways, at all exits and at the head, foot and landing of every stairway.

(2) EXIT LIGHTS. Every required exit, other than those within private living units, from each floor shall be indicated by an approved illuminated, red exit sign bearing the word EXIT or OUT in plain letters not less than 5 inches in height.

History: 1-2-58; r. and rev. Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 57.12 Steps, stairs and shafts.** (1) EXTERIOR STAIRS. Exterior stairs shall conform to the requirements of section Ind 51.16, except that less than 3 steps may be provided between exterior platforms and grade for apartments, row houses and town houses, and the platforms or treads between such risers do not exceed 5 feet 0 inches in length in the direction of travel.

(2) INTERIOR STAIRS. Interior stairs shall conform to the requirements of section Ind 51.16, except that stairs which are used by not more than 25 persons shall be not less than 3 feet wide.

(a) *Exception.* A spiral stairway, as described in section Ind 51.16 (10), may be used as the only exit from a mezzanine within an individual living unit provided the mezzanine does not exceed 400 square feet in area.

(3) CHANGES OF ELEVATION WITHIN INDIVIDUAL LIVING UNITS. Changes in elevation shall be overcome by means of step(s), stairs or ramps.

(4) ENCLOSURE OF INTERIOR STAIRWAYS AND SHAFTS. (a) All stairways and shafts shall be enclosed as specified in Table 51.03-A and in section Register, December, 1978, No. 276 Building and heating, ventilating and air conditioning code
Ind 51.02 (11), except that in all buildings of 3 or more stories, all basement stairways shall be enclosed with 2-hour fire-resistant partitions as specified in section Ind 51.04.

(b) In buildings of more than 3 stories, all stairways shall be enclosed with 2-hour fire-resistant partitions as specified in section Ind 51.04.

(c) In all buildings of 3 or more stories in which the first story is used for business purposes, at least one stairway shall be enclosed in the first story with an unperforated wall of 2-hour fire-resistant construction, as specified in section Ind 51.04, and such stairway shall not connect with the basement.

(d) Every elevator shaft, dumbwaiter shaft, clothes chute, wastepaper chute, pipe shafts and other similar vertical shafts in buildings of 3 or more stories shall be enclosed with at least 2-hour fire-resistant partitions as described in section Ind 51.04.

Note: See section Ind 57.08 for stairs and shafts leading to garage areas.

History: 1-2-66; am. Register, February, 1971, No. 182, eff. 7-1-71; r. and recr. eff. 1-1-72; r. and recr. eff. 1-1-76; r. and recr. eff. 1-1-78.

Ind 57.13 Sanitary facilities. (1) Toilet rooms. Every building included under the scope of this chapter shall be provided with separate toilet rooms for each sex, except that a common toilet room may be provided in individual living or sleeping units.

(2) Sanitary fixtures. The number of sanitary fixtures required for each sex shall be determined in accordance with the ratios established in Table 57.13.

(3) Employees. Sanitary facilities for employees who do not sleep in the building shall be provided in accordance with the requirements of Table 54.12, unless the employees have access to the facilities provided for the residents.

(4) General public. Sanitary facilities for the general public shall be provided in accordance with the requirements of Table 54.12-A or 54.12-B, unless the general public has access to the facilities provided for the residents.

(5) Kitchen sink. One kitchen sink, equipped with hot and cold running water, shall be provided in living units equipped for food preparation.

Note: See chapter H 24 — general and special hospitals, and chapter H 32 — nursing homes, rules of the department of health and social services, for special requirements and locations for water closets, lavatories and hot water facilities.

History: 1-2-66; am. (1), (3) and (8). Register, June, 1968, No. 5, eff. 7-1-68; cr. (4). Register, July, 1971, No. 139, eff. 9-1-71; r. and recr. Register, December, 1970, No. 180, eff. 1-1-71; r. and recr. Register, December, 1976, No. 232, eff. 1-1-77.

Ind 57.15 Repairs. Every building of this classification, and all parts thereof, shall be kept in good repair and the roof shall be maintained to prevent leakage. All rainwater shall be so drained and conveyed therefrom to prevent dampness in the walls and ceilings.
Ind 57.16 Cleanliness. Every building shall be kept clean, and shall also be kept free from any accumulation of dirt, filth, rubbish, garbage, or other matter in or on the same or in the yards, courts, passages, areas or alleys connected with or belonging to the same.

Ind 57.17 Size of rooms. Every habitable room used for sleeping shall be of sufficient size to afford at least 400 cubic feet of air space for each occupant over 12 years of age and 200 cubic feet for each occupant under 12 years, except that a minimum of 150 cubic feet may be provided for infants in hospital nurseries. No greater number of occupants than the number thus established shall be permitted in any such rooms.

History: 1-2-56; r. and rec. Register, June, 1967, No. 123, eff. 7-1-67; r. and rec. (2), Register, July, 1967, No. 129, eff. 8-1-67; r. (2). Register, December, 1970, No. 160, eff. 1-1-71; am. Register, September, 1973, No. 219, eff. 10-1-73.

Ind 57.18 Habitable rooms—floors below grade.* (1) Any building or part of a building used or occupied as a hospital, home for the aged and infirm, nursing home, convalescent hospital or home, asylum, mental hospital, jail or place of detention shall not have any living units located below grade (at building) except:

(a) In ground-story living units, habitable rooms shall have at least one exterior wall with a full exterior exposure from the ground floor level to the ceiling. The exterior exposure shall not be made by the construction of an awning.

(2) Living units, other than those in (1) above, having habitable rooms, or parts thereof, on floor levels below grade (at building) shall comply with the requirements of this section.

(a) The grade (at building) does not include the grade level within the perimeter of an area way.

(3) Every habitable room shall have at least one exterior wall adjoining an area way or court.

*See Appendix A for further explanatory material.
(4) Every habitable room shall have at least one outside window which can be opened from the inside without the use of tools to provide a clear opening of not less than 22 inches in least dimension and not less than 5 square feet in area, with the bottom of the opening not more than 4 feet above the floor.

(a) Windows having sills below grade (at building) shall be provided with an areaway as described in (5) of this section.

(b) All windows shall comply with the requirements of Ind 52.02 and 57.19 in addition to this subsection.

(c) Window assemblies of a type which, when open, obstruct emergency egress shall not be used.

(5) Areaways used for compliance with this section shall:

(a) Have a minimum width of 3 feet measured perpendicular to the building wall;

Note: For further restrictions, see Ind 64.07.

(b) Have, when used as a required means of egress, exits complying with sections Ind 61.16 and 62.21.

(6) * All living units with floors below grade (at building) shall have access to 2 exits complying with all applicable sections of this code except as listed below.

(a) Exception: Living units having one exit door leading directly outside (not to an areaway) need not have access to a second exit.

(7) All buildings having living units below grade (at building) shall be designed and constructed to prevent undue collection of moisture in all stories below grade.

Note #1: Surface and subsurface drainage systems for areaways and foundation walls are regulated under the requirements of the Wis. Adm. Plumbing Code Chapter 11-12, administered by the department of health and social services.

Note #2: See Ind 50.07 (2) "Note #3" for reference to flood plain requirements.

(a) All foundation walls shall be thoroughly dampproofed prior to backfilling of soil.

(b) Provisions shall be made to prevent the accumulation of moisture due to condensation of high humidity so as to prevent slippery floors and to prevent conditions susceptible to mildew or other undesirable fungi or bacteria.

Note #1: The inside design conditions for cooling or dehumidification will be accepted on the basis of a dry bulb temperature of 75°F and a relative humidity not greater than 60%.

Note #2: See Ind 50.12 (4) (c) 2 "Note" for the acceptance of nationally recognized association methods and standards as a basis for calculations and design data.

Note #3: The standards for winter heating are found in Chapter Ind 64 of this code.

History: 1-2-50; r. and reen., Register, September, 1974, No. 418, eff. 10-1-78.

*See Appendix A for further explanatory material.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 207

Ind 57.19 Windows. The outside windows in every habitable room shall have a total sash area of at least one-tenth of the floor area of the room but not less than 12 square feet. The openable area of such windows shall be equal to not less than 5% of the floor area of the room served.

Note: Also see Ind 52.02 and Ind 64.07.

History: 1-2-56; r. and rev. Register, September, 1950, No. 45, eff. 10-1-56; r. and rev. Register, June, 1957, No. 138, eff. 7-1-67; r. and recr. (2) Register, July, 1967, No. 139, eff. 8-1-67; r. (2) Register, December, 1970, No. 180, eff. 1-1-72; am. Register, September, 1979, No. 213, eff. 10-1-73.

Ind 57.20 Isolation of fire hazards. (1) All boiler and furnace rooms, including fuel rooms and breeching, all laundries, drying rooms, carpenter shops, paint shops, and other hazardous work rooms and storage rooms in hospitals and buildings accommodating transient, which are more than 3 stories in height and in all asylums and other places of detention shall be enclosed with a 4-hour fire-resistive enclosure as specified in section Ind 51.04. All openings shall be protected by self-closing fire-resistive doors as specified in section Ind 51.047.

(2) In all other buildings under this classification, such rooms shall be enclosed with a 2-hour fire-resistive enclosure as provided in section Ind 51.04, or better, except as otherwise provided in this section.

(3) In apartment buildings not more than 2 stories in height, such rooms shall be enclosed with a 1-hour fire-resistive enclosure as specified in section Ind 51.04, or better, except as provided in subsection (5).

(4) In one-story buildings having a floor area of not more than 3,000 square feet and two-story buildings having a floor area of not more than 1,500 square feet per floor which are used for business purposes and also accommodate not more than 2 families, such rooms shall be enclosed with a 1-hour fire-resistive enclosure, as specified in section Ind 51.04, or better.

(5) The enclosure for the heating plant may be omitted in apartment buildings not more than 2 stories in height and having not more than 2 living units on a floor, and in rooming houses not more than 2 stories in height and having not more than 8 habitable rooms on a floor, provided no part of the building is used for business purposes and all interior basement stairways are enclosed with a one-hour fire-resistive enclosure as specified in section Ind 51.04, or better. See section Ind 57.25 for exception to row house installations.

(a) Exception: Gas-fired space heaters may be used within living units of apartment buildings and within habitable rooms of motels or tourist courts without an enclosure if approved by the department. Space heaters fired with liquid fuel may be used without an enclosure in motels and apartment buildings not more than one story in height.

History: 1-2-56; am. (1) Register, September, 1969, No. 46, eff. 10-1-69; am. Register, February, 1971, eff. 7-1-71; r. and recr. eff. 6-1-71 and spec. 1-1-72; cr. eff. 1-1-72; Register, July, 1971, No. 187; am. (5) Register, September, 1978, No. 213, eff. 10-1-73.

Ind 57.21 Standpipes. (1) FIRE DEPARTMENT STANDPIPES. Fire department standpipes shall be provided in all buildings exceeding 60 feet in height.

Register, December, 1978, No. 276
Building and heating, ventilating, and air conditioning code
(2) **First-Aid Standpipes.** (a) *Institutional occupancies.* First-aid standpipes shall be provided in all buildings used as hospitals, homes for the aged, nursing homes, asylums, places of detention, and buildings with similar uses, unless an approved automatic sprinkler system is installed.

(b) *Residential occupancies.* First-aid standpipes shall be provided in all apartment buildings, rooming houses, hotels, motels, and buildings with similar uses, 3 stories or more in height which accommodate more than 20 occupants, unless an approved automatic sprinkler system is installed.

**History:** 1-2-56; r. and recr. Register, December, 1976, No. 264, eff. 1-1-77.

Ind 57.22 Fire alarms. (1) Every building which accommodates 20 or more persons except hospitals, places of detention, and motels not more than one story in height in which each unit has an outside door at grade level, shall be provided with a fire alarm system complying with section Ind 51.24.

(2) Every hospital which accommodates 20 or more persons shall be provided with a fire alarm complying with section Ind 51.24 except that chimes or other approved sounding devices shall be used when within hearing distance of the patients. Visual attention compelling devices may be used in hospitals where approved by the department of industry, labor and human relations.

(a) A presignal fire alarm system may be installed in hospitals or hotels when not less than 4 employes are on duty at all times to respond to fire alarms.

(b) Where presignal systems are installed, it is recommended that the fire department be called immediately after the pre-alarm signal is received.

(3) This section applies to buildings now in existence and to buildings hereafter constructed.

**History:** 1-2-56; am. Register, October, 1958, No. 34, eff. 11 1-58.

Ind 57.24 Directions for escape. (1) In every habitable room likely to be used by transients, a notice shall be conspicuously posted giving complete and plain directions for reaching at least 2 exits.

(2) In addition to this, a red exit light shall be provided over each exit on every floor.

**History:** 1-2-56; am. (1), Register, September, 1973, No. 213, eff. 10-1-73.

Ind 57.25 *Row house.* (1) **Definition.** A row house is a place of abode not more than 2 stories in height, arranged to accommodate 3 or more attached row living units in which each living unit is separated from the adjoining unit by an unperforated vertical occupancy separation of not less than one-hour fire-resistive construction, extending from the basement or lowest floor to the under side of the roof boards.

**Notes:** The intent of this section is to allow the piercing of vertical occupancy separation by plumbing and electrical system components.

Register, December, 1978, No. 276
Building and heating, ventilating
and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS
Apartment buildings, hotels, places of detention

(2) REQUIREMENTS. (a) Each living unit shall have separate entrances and exits leading directly to the outside.

(b) Heating ducts may be installed in the space between studs in the occupancy separation wall provided all such ducts are covered with 1/4 inch corrugated asbestos or the equivalent protection. Heating ducts shall not be installed back to back in the occupancy separation wall.

(c) Where each living unit has a separate heating system, the requirements of sections Ind 57.20 and 57.22 need not be complied with.

(d) Each living unit shall have attic access as specified in section Ind 51.02 (18) (a). The other provisions of Ind 51.02 (18) (b) need not be complied with.

History: 1-2-56; am. (1) and (2) 48), Register, September, 1973, No. 213, eff. 10-1-73, reg.
(2) (d), Register, December, 1975, No. 240, eff. 1-1-76.

Ind 57.26 Residential health care facilities. All new residential health care facilities, including hospitals and nursing homes, shall be provided with access to a primary floor, interior circulation and toilet facilities in accordance with section Ind 52.04 and the following requirements:

(1) INTERIOR CIRCULATION. Twenty percent of all rooms designated for patient use, and the toilet rooms provided for those rooms, shall be accessible to the physically disabled. The accessible rooms shall be integrated throughout all in-patient and out-patient areas. If an isolation facility is provided, at least one of the required accessible patient rooms shall be located in such facility.

(2) TOILET FACILITIES. The accessible patient toilet facilities shall be designed to permit unimpeded use by persons using standard wheelchairs. Fixture configuration, door swing and open space will determine the minimum size of accessible toilet rooms.

Note: See Appendix for examples of acceptable fixture layout and door location and swing. In all cases where the toilet room door swings into the room, a 60-inch diameter turning space, with the door closed, is required.

(3) BATHING FACILITIES. Where bathing facilities are required, the bathtub and shower designs shall comply with the following requirements:

(a) Single accessible bathing facility. If accessible bathing facilities are not provided in all of the required accessible patient toilet rooms, at least one centrally located accessible bathing facility shall be provided near each nursing station on each floor. The bathing facility shall be available to both sexes and shall be accessible from a public corridor or public area.

Note: Shower stalls are preferred to bathtubs. See Appendix for examples of accessible bathing facilities.

(b) Bathtubs. The bathtub shall be equipped with a hand shower with a flexible hose not less than 6 feet in length. A sent of nonabsorbent material shall be provided and shall be mounted 17 in 20 inches above the floor of the bathtub, and may be either folding, retractable or fixed, unless an alternate method, such as a lift, is provided. Grab bars shall be

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
mounted on 2 sides of the bathtub and shall comply with the requirements of section Ind 52.04 (8) (c) 4. (See Appendix for examples of accessible bathroom arrangements.)

Note: Refer to Wis. Adm. Code chapter II 62—Design, Construction, Installation, Supervision and Inspection of Plumbing, for requirements pertaining to the plumbing system, including the use of vacuum breakers.

(c) Showers. The shower stall shall be equipped with lever water controls. A seat of nonabsorbent material shall be provided and located 17 to 20 inches from the floor of the shower, and may be folding, retractable or fixed. Grab bars shall be mounted on 2 sides of the shower stall and shall comply with the requirements of section Ind 52.04 (8) (c) 4. (If a special wheelchair is provided for use in the shower, the grab bars and seat are not required.) The threshold to the shower stall shall be no more than ½-inch and the edges shall be beveled to provide a smooth, unbroken surface to accommodate a wheelchair. (See Appendix for examples of accessible shower room arrangements.)

(4) Existing Construction (Remodeled or Additions). Remodeling, additions, or both, to existing ancillary areas shall comply with the requirements of sections Ind 52.04 (6), Ind 57.26 and Table 57.26. Remodeling, additions, or both, to existing patient room areas shall comply with the requirements established in section Ind 57.26 and Table 57.26. The maximum number of required accessible patient sleeping rooms having toilet rooms in or for these rooms is 20% of the total number of patient sleeping rooms.

### Table 57.26

**History:** Cr. Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 57.27 Smoke detection.** (1) **Definitions.** (a) **Smoke detector.** Smoke detector means a device which detects particles or products of combustion other than heat.
(b) **Sleeping area.** Sleeping area means the area(s) in which bedrooms or sleeping rooms are located. Bedrooms or sleeping rooms separated by other use areas such as kitchens or living rooms, but not bathrooms, are considered as separate sleeping areas for the purposes of this section. Each individual room or suite of rooms in hotels or motels is considered a separate sleeping area.

(2) **Number of detectors required and location.** All buildings within the scope of this chapter, except hospitals and nursing homes, shall be provided with approved smoke detectors. At least one detector shall be provided at the head of every open stair and at the door leading to every enclosed stair on each floor level, including the basement, and in each sleeping area.

*Note: The department recognizes smoke detectors listed by Underwriters' Laboratories (UL).*

(3) **Installation and maintenance.** Smoke detectors shall be installed in accordance with the manufacturer's directions and specifications and shall be maintained in good working order.

*Note: The department recommends Underwriters' Laboratories standards UL No. 187 and 168 for testing of smoke detectors and National Fire Protection Association standards NFPA No. 72B and No. 74 for maintenance of smoke detectors.*

**History:** Ct. Register, December, 1978, No. 278, eff. 1-1-79.

CHILD DAY CARE FACILITIES

Ind 60.001 Scope (p. 213)
Ind 60.01 Definitions (p. 213)

Part I

General Requirements
Ind 60.10 Occupancy separation (p. 214)
Ind 60.11 Capacity of buildings (p. 214)
Ind 60.12 Doors (p. 214)
Ind 60.18 Windows and outside openings (p. 215)
Ind 60.14 Access to attic and roof (p. 216)
Ind 60.15 Sanitary facilities (p. 215)
Ind 60.16 Electrical work (p. 216)
Ind 60.17 Illumination (p. 216)
Ind 60.18 Heating and ventilating (p. 216)
Ind 60.19 Operating features (p. 216)

Part II

Day Care Centers Serving 4 to 8 Children
Ind 60.20 Class of construction (p. 217)
Ind 60.21 Existing (p. 217)

Part III

Day Care Centers Serving 9 or More Children
Ind 60.22 Passageways (p. 217)
Ind 60.23 Stair and shaft enclosure (p. 217)
Ind 60.24 Fire extinguishers (p. 218)
Ind 60.25 Hazardous areas (p. 218)

Ind 60.001 Scope. The requirements of this chapter shall apply to all public and private day care centers accommodating children, including all buildings, or parts of buildings, used as child day care facilities. Chapter Ind 60 shall not apply to public schools defined in s. 115.01 (1), Stats., or private schools defined in s. 121.51 (3), Stats., or to short-time programs (i.e., Boy Scouts, Girl Scouts, Sunday schools, etc.).

(1) Part I of this chapter is general requirements applicable to all child day care facilities within the scope of chapter Ind 60.

(2) Part II of this chapter is applicable to day care centers serving 4 to 8 children.

(3) Part III of this chapter is applicable to day care centers serving 9 or more children.

(4) Chapters Ind 50 through Ind 53 are applicable for general and structural design requirements.

Note: All references to code chapters and sections preceded by the letters Ind refer to rules of the department of industry, labor and human relations published in the Wisconsin Administrative Code. I.e., Chapters Ind 50 and Ind 68 are a part of Wisconsin Administrative Code Chapters Ind 60.04 Building and Heating, Ventilating and Air Conditioning Code.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.01 Definitions. (1) DAY CARE CENTER. Any place which receives at any one time for compensation 4 or more children under the age of 7 years, for care and supervision, for less than 24 hours a day for more than 10 days a month, without the attendance of a parent, relative or legal guardian.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.
**GENERAL REQUIREMENTS**

**Ind 60.10 Occupancy separation.** (1) Where centers are located in conjunction with an assembly hall or a hazardous occupancy, the requirements of sections Ind 54.60 (2) and Ind 65.05, respectively, shall be applicable. If there is no requirement, a one-hour fire-resistive separation shall be provided.

(a) Day care facilities in a church or school building need not comply with the requirements of this section provided all other occupancy requirements are complied with; i.e., the fire wall requirement may be waived if more stringent requirements of chapter Ind 55 or chapter Ind 56 are complied with.

(b) Private garages attached to day care centers serving 4-8 children shall be separated by a one-hour fire-resistive wall.

*History: Cr. Register, October, 1974, No. 226, eff. 11 1 74.*

**Ind 60.11 Capacity of buildings.** (1) The occupant load shall be the maximum number of children intended to occupy that floor, but not more than one child per 35 square feet of net floor area. Licensing limitations of the department of health and social services may supersede this requirement.

*Note: The minimum staff-to-child ratio shall meet the requirements of DW-CY 40.72 of the department of health and social services, which is as follows:*

<table>
<thead>
<tr>
<th>Age</th>
<th>Minimum number of staff to children</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-1 years</td>
<td>1 to 3 children</td>
</tr>
<tr>
<td>1-2 years</td>
<td>1 to 4 children</td>
</tr>
<tr>
<td>2 1/2 years</td>
<td>1 to 5 children</td>
</tr>
<tr>
<td>2 1/2-3 years</td>
<td>1 to 8 children</td>
</tr>
<tr>
<td>3 1/2-4 years</td>
<td>1 to 10 children</td>
</tr>
<tr>
<td>4 1/2-5 years</td>
<td>1 to 12 children</td>
</tr>
<tr>
<td>5 years or over</td>
<td>1 to 18 children</td>
</tr>
</tbody>
</table>

*History: Cr. Register, October, 1974, No. 226, eff. 11 1 74.*

**Ind 60.12 Doors.** (1) All exit doors, and all doors along the path of travel to an exit, shall meet the requirements of section Ind 51.15 with the following exceptions:

(a) The width of all required exit doors may be reduced to 3 feet.

(b) The width of all required exit doors may be reduced to 2 feet 8 inches in existing buildings not accommodating more than 8 children.

(c) All such doors used by not more than 25 persons need not swing outward.

(d) All such doors in centers serving less than 20 children need not be provided with illuminated exit signs.

(2) Every closet door latch shall be such that children can open the door from inside the closet.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 215

Child Day Care Facilities

(3) Every toilet room door lock shall be designed to permit opening of the locked door from the outside in an emergency, and the opening device shall be readily accessible to the staff.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74; cr. (1) (d), Register, December, 1977, No. 264, eff. 1-1-78.

Ind 60.13 Windows and outside openings. (1) All classrooms and areas used for instruction, study or sleeping purposes shall be provided with vision panels or windows facing directly upon a street, alley, or open court. The vision panels or windows shall be glazed with glass or other approved material.

(2) The windows or vision panels shall have an aggregate minimum glass area of 10% of the floor area. The minimum openable area of the doors and windows shall be equal to 5% of the floor area of the room served.

(3) See section Ind 60.18 (2) for exception.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.14 Access to attic and roof. (1) Every 2-story building shall have a permanent means of access to the attic space from inside the building. Every building more than 2 stories in height shall have a permanent means of access to the roof. Where a scuttle opening is provided, the opening shall be not less than 20 x 30 inches.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.15 Sanitary facilities. (1) Fixtures required. Toilet facilities shall be provided in all day care centers.

(a) One water closet shall be provided for the first 10 children. One water closet shall be provided for each additional 15 children, or fraction.

(b) Children under the age of 30 months need not be included when determining the required fixtures; however, in all cases, at least one water closet and one lavatory shall be provided in all day care centers.

(c) Water closets and urinals for the staff, in accordance with section Ind 54.12, shall be provided in addition to those required for the children, in day care centers with 10 or more staff members at any one time.

(d) Urinals may be substituted for up to ½ of the total required water closets.

(e) Lavatories shall be provided in the ratio of one lavatory for every 2 water closets and urinals, or fraction.

(2) Privacy. (a) Doors to the toilet rooms and water closet compartments may be omitted for toilet rooms used by children, provided that other toilet facilities equipped with toilet room doors and water closet compartments, are available for the staff and children 10 years of age and older.

(b) Sex designated toilet rooms shall be provided, available for staff use, in centers having 10 or more staff members at any one time.

Register, December, 1978, No. 278
Building and heating, ventilating
and air conditioning code
Ind 60.16 Electrical work. (1) The electrical systems in existing buildings proposed to be used as day care centers shall conform to the Wisconsin state electrical code.

(2) Special protective receptacle covers shall be installed in all areas occupied by children.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.17 Illumination. (1) The illumination for occupied areas, other than sleeping areas, shall have a minimum intensity of 20 foot-candles at a horizontal plane 24 inches above the floor. All other spaces shall meet the requirements of section Ind 19.04, Wis. Adm. Code chapter Ind 19, Illumination Code.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.18 Heating and ventilating. (1) The heating system shall be capable of maintaining an inside temperature of not less than 67° F.

(2) Fresh air at the rate of 5 cubic feet per minute per occupant shall be provided for centers that do not comply with the requirements of Ind 60.13 (2).

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.19 Operating features. (1) Fire prevention inspections shall be conducted monthly. A copy of the latest completed inspection form shall be posted in a conspicuous place in the day care facility.

(2) A fire evacuation plan shall be practiced not less than once per month. Fire alarm and/or smoke detection systems shall be tested at weekly intervals. It is recommended that fire safety be a part of the educational program of the center.

(3) Furnishings, decorations, or other objects shall not be so placed as to obstruct exits, access thereto, egress therefrom, or visibility thereof.

(4) * Flammable and combustible liquids shall be stored in areas accessible only to designated individuals and as recommended in NFPA standard No. 30, Flammable and Combustible Liquids Code.

Note: NFPA standard No. 30 is not a mandatory standard.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

*See Appendix A for further explanatory material.
Part II

DAY CARE CENTERS SERVING 4 TO 8 CHILDREN

Ind 60.20 Class of construction. (1) Buildings which are 2 stories or less in height shall be constructed of wood frame unprotected type No. 8 construction, or better, as specified in section Ind 51.03.

(2) Buildings which are 3 stories in height shall be constructed of metal frame unprotected type No. 6 construction, or better, as specified in section Ind 51.03.

(3) Buildings which are more than 3 stories in height shall be constructed of fire-resistive type No. 1 or No. 2 construction, as specified in section Ind 51.03.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.21 Exiting. (1) Children under the age of 30 months shall be restricted to the first floor, as determined in section Ind 51.02 (14), or to ground floors provided with 2 means of egress directly to grade.

(2) Each floor occupied by children shall have not less than 2 exits.

(3) The exits shall be located to provide the best possible means of egress.

(4) Where the floor above exit discharge grade is used by children for sleeping purposes, one exit shall lead directly from the floor to the exterior.

(5) Travel distance from any point to an outside exit door or stair enclosure leading to the outside shall not exceed 75 feet. Travel distance may be increased to 125 feet when the building is provided with a sprinkler system in accordance with the requirements of section Ind 51.23.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74; am, (1), Register, December, 1977, No. 284, eff. 1-1-78.

Ind 60.22 Passageways. (1) The minimum unobstructed passageway width shall not be less than 3 feet.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.23 Stair and shaft enclosure. (1) A self-closing door shall be provided at the stair between the basement or ground floor and the first floor.

(2) A self-closing door or smoke detector shall be provided at the stair between the first floor and the second floor when the second floor is used by the children for sleeping purposes. (This requirement does not apply to buildings which are provided with a fire alarm system as described in section Ind 51.24.)

(3) Stairs and shafts serving 3 or more floor levels shall comply with the requirements of section Ind 51.02 (11) and Table 51.03-A.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.
Ind 60.24* Fire extinguishers. (1) A portable fire extinguisher suitable for Class B fires shall be provided for the kitchen and cooking area.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.25 Hazardous areas. (1) A boiler, furnace, or any area containing gas- or oil-fired units other than laundry or kitchen equipment shall be protected by one of the following methods:

(a) One-hour fire-resistant enclosure. The door in the enclosure shall be a 1½-inch thick, solid wood core door. Combustion air shall be provided in accordance with section Ind 64.09.

(b) Protected by a smoke detection system.

(2) Hazardous equipment in areas occupied by children shall be separated by one-hour fire-resistant partitions.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74; am. (1) (a), Register, December, 1975, No. 240, eff. 1-1-76.

Part III

DAY CARE CENTERS SERVING 9 OR MORE CHILDREN

Ind 60.30 Class of construction. (1) Class of construction for day care centers shall comply with Table 60.30. Day care centers located in buildings of more than 4 stories shall be provided with one independent stairway serving the day care center only and restricted to the height indicated in Table 60.30.

<table>
<thead>

X = permitted.

(a) All floors and supporting members shall have a one-hour fire-resistant rating.

(b) The entire building shall be equipped with an automatic sprinkler system in accordance with section Ind 51.23.

(c) All ceilings shall be covered with ½-inch gypsum wallboard or equivalent.

(d) All floor systems shall be of noncumhustible construction.

*See Appendix A for further explanatory material
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 219
Child Day Care Facilities

History: Cr. Register, October, 1974, No. 228, eff. 11-1-74.

Ind 60.31 Exiting. (1) Each floor shall have not less than 2 exits. All required exits shall lead directly, or through an enclosed stairway, to the outside.

(2) The exits shall be located to provide the best possible means of egress.

(3) Travel distance measured along safe passageways between:

(a) Any point in a sleeping room or suite and an exit access door of that room or suite shall not exceed 50 feet;

(b) Any room door intended as an exit access and an exit shall not exceed 50 feet;

(c) Any point in a room or suite and an exit shall not exceed 100 feet.

(4) The travel distances in (3) above shall be reduced by 50% for children under the age of 30 months.

(5) The travel distances in (3) above may be increased by 50 feet in buildings completely equipped with an automatic sprinkler system. No increase in travel distance is permitted for children under the age of 30 months.

(6) Children under the age of 30 months shall be restricted to the first floor, as determined in section Ind 51.02 (4), or to ground floors provided with 2 means of egress directly to grade.

History: Cr. Register, October, 1974, No. 228, eff. 11-1-74; am. (4), (5) and (6) Register, December, 1977, No. 264, eff. 1-1-78.

Ind 60.32 Required exit width. The total required exit width from a building level shall be in accordance with the requirements of sections Ind 51.15 (6) and Ind 51.16 (3).

(2) If horizontal exits (section Ind 61.19) are provided for any floor, the number of persons accommodated on such floor may be increased at the rate of 100 persons for each 40 inches of width of such exits, provided such increase shall not exceed 10% of the number of persons accommodated by the stairways.

History: Cr. Register, October, 1974, No. 228, eff. 11-1-74; r. and rev. Register, December, 1974, No. 228, eff. 1-1-75.

Ind 60.33 Passageways. (1) The minimum unobstructed width of corridors and passageways shall be determined in the same manner as specified for stairways and exits in section Ind 60.32. The minimum width shall be not less than 3 feet 8 inches.

(2) The minimum passageway width shall not be less than 3 feet in existing buildings proposed to be used as day care centers, provided the capacity of the day care center does not exceed 40 persons.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.34 Stair and shaft enclosure. (1) All stairs and vertical shafts serving 3 or more floor levels shall comply with section Ind 51.02.
(11) and Table 51.03-A, All required stair enclosures must lead to the outside without interruptions.

(2) No storage closets shall be placed under any stairway, platform or landing. A room may be placed under a stairway or stair landing of 2-hour fire-resistive construction, or better, provided such room does not have combustible material or hazardous equipment stored or operated therein. The door to such room shall be a self-closing, solid, flush type wood door, 1¾ inches in thickness, or better.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.35* Fire extinguishers. (1) Portable fire extinguishers suitable for Class B fires shall be installed in kitchens and cooking areas, and extinguishers suitable for Class A fires shall be installed throughout the remainder of the center.

Ind 60.36 Fire alarm systems. (1) Every building accommodating more than 20 children shall be provided with a fire alarm system complying with the requirements of section Ind 51.24.

(a) * Exception. Buildings used for other purposes prior to occupancy as a day care center shall be provided with an approved fire alarm system. The department will accept fire alarm systems complying with the requirements of NFPA standard No. 72A, Local Protective Signaling Systems, or portable alarms approved by the department.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.37 Hazardous areas. (1) Hazardous areas, including boiler or furnace rooms, fuel storage, maintenance shops, woodworking shops, painting areas, and laundries having gas- or oil-fired units with a maximum aggregate input of 37,000 Btu or more, shall be separated from other parts of the building by construction having not less than a one-hour fire-resistive rating. All openings shall be protected by ¾-hour self-closing doors in buildings of 3 stories or less in height. Enclosures shall have a 2-hour fire-resistive rating with ⅞-hour "B" label doors in buildings more than 3 stories in height. If the hazard is severe, automatic sprinklers shall be provided in addition to the fire-resistive enclosure when deemed necessary by the department.

History: Cr. Register, October, 1974, No. 226, eff. 11-1-74.

Ind 60.38 Exit and emergency lighting. (1) All required exit doors and exit stairways in day care centers shall be plainly marked by a red,

*See Appendix A for further explanatory material.

Ind 61.001 Scope. (1) CBRF serving 9-20. The requirements of this chapter shall apply to all community-based residential facilities, herein afterwards referred to as CBRF, providing care, treatment and services to 9 through 20 unrelated adults, to be located in existing buildings.

Note: Refer to the rules of the department of health and social services for requirements pertaining to CBRF to be located in existing buildings providing care, treatment and services to 3 through 8 unrelated adults.

(a) Except for section Ind 51.01, the requirements of chapters Ind 51, Ind 52, Ind 53 and Ind 61 do not apply to existing conditions unless specifically referred to in this chapter. Additions, alterations and remodelings shall conform to the current applicable portions of these sections.

(2) NEWLY CONSTRUCTED CBRF. All newly constructed CBRF providing care, treatment and services to 3 or more unrelated adults shall be within the scope of chapter Ind 57.

Note #1: This code is not intended to limit the power of cities, villages and towns to make, or enforce, additional or more stringent regulations, provided the regulations do not conflict with this code, or with any other rule of the department or law.

Note #2: CBRF intending to utilize federal funds may have to comply with other requirements in addition to those outlined herein, such as NFPA 101 Life Safety Code, ANSI standards for barrier-free design, and miscellaneous federal regulations.

History: Cr. Register, May, 1978, No. 209, eff. 7-1-78.

Ind 61.01 Definitions. (1) AMBULATORY. Ambulatory means able to walk without assistance or difficulty.

(2) CAPACITY. The capacity for CBRF is that maximum number of residents as allowed by rules of the department of health and social services.

(3) CLASSES OF CBRF. (a) Class A. Class A CBRF serve residents all of whom are ambulatory, capable of following directions and taking independent action for self-preservation under emergency conditions.
(b) Class B. Class B CBRF serve residents one or more of whom are semiambulatory or nonambulatory, but all of whom are mentally and physically capable of taking independent action for self-preservation under emergency conditions.

(c) Class C. Class C CBRF serve residents one or more of whom are not physically or mentally capable of taking independent action for self-preservation under emergency conditions.

(4) **Community-based residential facility.** A community-based residential facility is any place where 3 or more unrelated adults reside in which care, treatment or services above the level of room and board but not including nursing care are provided to persons residing in the facility as a primary function of the facility. "Community-based residential facility" does not include a nursing home, except that the department of health and social services may designate a category or categories of intermediate care facilities which serve fewer than 20 residents and which otherwise meet the definition of this subsection to be licensed and regulated as community-based residential facilities. The reception and care or treatment of a person in a convent or facility owned or operated exclusively by and for members of a religious order shall not constitute the premises to be a "community-based residential facility."

(5) **Department.** Department means the department of industry, labor and human relations, unless otherwise designated.

(6) **Electrical service.** Electrical service means the conductors and equipment for delivering electrical energy from the supply system to and including the wiring system of the CBRF.

(7) (a) **Existing Building, Currently Licensed.** A facility licensed or certified within 24 months prior to the effective date of these rules (chapter Ind 61) is considered an existing building for the purposes of this code (chapter Ind 61).

(8) **Floors and stories.** (a) **Attic floor.** Attic floor (s) containing habitable rooms and that are occupied shall be counted as a story.

(b) **Basement floor.** A basement is a floor level partially or totally below grade and not having any required exit(s) for any floor level above it.

(c) **First floor.** The first floor is the lowest floor having one or more required exits for that floor and for any floor(s) above or below it.

(9) **Habitable floor space.** Habitable floor space is the area of habitable rooms with a ceiling height more than 5 feet 6 inches, used for the purposes of sleeping, living, cooking or dining.

(10) **Habitable room.** A habitable room is any room used for the purposes of sleeping, living, cooking or dining, excluding such places as closets, bath or toilet rooms, pantries, stairways, corridors, service

Register, December, 1976, No. 276
Building and Heating,
Ventilating and Air Conditioning
rooms, laundries, utility rooms, cellars or basements unless finished for occupancy, storage spaces, foyers, unfinished attics, administrative offices, garages and similar spaces.

(11) Nonambulatory. Nonambulatory means not able to walk at all.

(12) Outside windows. Outside windows are windows which open directly to the out-of-doors or to unheated enclosed spaces, such as exterior balconies or sun porches.

(13) Primary function. Primary function is the basic or essential care, treatment or service provided to residents of the facility.

(14) Semiambulatory. Semiambulatory means able to walk with difficulty or able to walk only with assistance of aids, such as crutches, canes or walkers.

History: Cr. Register, May, 1979, No. 269, eff. 7-1-79.

Ind 61.10 Building construction and site. (1) Condition of building and site. All buildings utilized as CBRF shall be structurally sound without visible evidence of structural failure or deterioration.

(a) All courts, yards, or other areas on the premises shall be properly drained or graded to divert water away from the building.

(b) Fences, other minor construction, driveways, parking areas and similar paved areas shall be properly maintained in a safe condition.

(c) Walks shall provide convenient all-weather access to buildings and shall be properly maintained in a safe condition.

(d) Exterior surfaces of buildings and structures not inherently resistant to deterioration shall be treated with a protective coating of paint or other suitable preservative which will provide adequate resistance to weathering. Any exterior surface treated with paint or other preservative shall be maintained so as to prevent chipping, cracking or other deterioration of the exterior surface or the surface treatment. All paint or other preservative shall be applied in a workmanlike fashion. Lead-based paint shall not be used.

(e) Every interior floor, wall and ceiling shall be kept in proper repair. Interior walls and ceiling in spaces subjected to moisture shall be provided with water-resistant, hard surfaces and shall have no serious surface irregularities or cracking.

Note: The use of "indoor-outdoor" carpeting, or other such carpeting approved for application on floors subjected to moisture, is acceptable.

(f) Every foundation wall, exterior wall, floor and roof shall be watertight, rodentproof and reasonably weathertight and shall be kept in proper repair.

(g) Every exterior window, exterior door and exterior basement hatchway shall be watertight, rodentproof and reasonably weathertight and kept in proper repair. Every interior door shall be kept in proper repair. All installed door and window hardware shall be maintained in proper working condition.

(h) Every inside and outside stair, every porch and every appurtenance to the building shall be so maintained as to be safe in use.
WISCONSIN ADMINISTRATIVE CODE

(i) Abrasive strips or nonskid surfaces to reduce or prevent slipping shall be used when slippery surfaces present a hazard.

(2) GARAGES AND ACCESSORY BUILDINGS. Garages and accessory buildings located on the same property with a CBRF shall comply with the following:

(a) Attached garages. 1. Common walls between a CBRF and an attached garage shall be protected with not less than one layer of ½-inch type X gypsum board with taped joints, or equivalent, on the garage side and with not less than one layer of ⅞-inch gypsum board with taped joints, or equivalent, on the CBRF side. Such walls shall provide a complete separation.

2. Floor-ceiling assemblies between garages and CBRF shall be protected with not less than one layer of ½-inch type X gypsum board on the garage side of the ceiling or roof framing.

3. Openings between attached garages and CBRF shall be protected by self-closing, 1-¾-inch solid wood core doors or with self-closing doors of equivalent fire-resistant rating.

Note: A spring of sufficient strength to close the door and activate the door latch will be acceptable for meeting the self-closing portion of this requirement.

4. The level of the garage floor shall be at least 1-½ inches below any adjoining floor level.

b. Exception. Basement garage floors need not comply with this rule if pitched towards the garage door or provided with a floor drain.

(b) Detached garages. 1. Detached garages shall be located a minimum of 3 feet 0 inches from the CBRF.

2. Detached garages less than 3 feet 0 inches from the CBRF shall comply with the requirements for attached garages as found in section Ind 61.10 (2) (a).

(c) Detached accessory buildings. 1. Detached accessory buildings in which fueled, motorized vehicles and appliances (snowmobiles, power lawn mowers, motorcycles, snow blowers and similar equipment) are stored shall be located a minimum of 3 feet 0 inches from the CBRF.

2. Detached accessory buildings in which fueled, motorized vehicles and appliances are stored, less than 3 feet 0 inches from the CBRF, shall comply with the requirements for attached garages as found in section Ind 61.10 (2) (a).

Note: See sections Ind 64.50, 65.05 and 69.10 for separation requirements from other occupancies.

(3) SMOKE SEPARATION. (a) A door shall be provided at any interior stair between the basement(s) and the first floor. This door shall be provided with a latch and an automatic closing device and normally be kept closed.

(b) Any shaft (clothes chute, dumbwaiter, laundry chute and similar shafts) leading to the basement(s) shall be provided with a door on each
level above the lowest floor. The door(s) shall be provided with a latch and an automatic closing device and shall normally be kept closed.

Note: A spring of sufficient strength to close the door and activate the door latch will be acceptable for meeting the automatic closing device portion of these requirements.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.11 Minimum class of construction, Class of construction for CRRF shall comply with Table 61-I.

**TABLE 61-I**

(a) Type 8 construction will be permitted if the basement is protected by a complete automatic sprinkler system or if all ceilings, including basements, are completely protected with ½-inch gypsum wallboard, or equivalent, and all stairway exits are interior stairs, one of which is completely unlined, with at least one-hour rated construction, to a first-story outside exit.

(b) Type 8 construction will be permitted if building is protected by a complete automatic sprinkler system or if only ambulatory residents are permitted above the first story and in the basement.

(c) Types 5 and 6 construction will be permitted if of totally noncombustible construction.

(d) Type 8 construction will be permitted if building is protected by a complete automatic sprinkler system and provided only ambulatory residents are permitted above the first story and in the basement.

(e) Types 8, 5 and 6 construction will be permitted if of totally noncombustible construction and the building is protected by a complete automatic sprinkler system.

Note: The following brief descriptions of construction types are included as guidelines only. Designers and builders should refer to Ind 51.03 and Table 61-63-A for detailed descriptions and requirements for the various construction types.

Type 8 - Wood framed walls, floors, roofs and partitions, including wood framed exterior walls faced with masonry veneers (typical residential construction).

Type 8 - Metal framed walls and roofs with steel structural framing; sheet metal covered exterior walls and roof (typical pre-engineered metal building).

Type 5 - Exposed walls entirely of masonry (concrete block, brick, concrete, etc.) floor and roof systems of wood, steel or concrete; interior partitions are wood framed. (Buildings with wood floors and roof systems or with wood framed partitions are not considered noncombustible.)

Type 8 - Totally noncombustible building with floors, roof and structural framing protected with hourly rated fireproofing materials.

Types 2 and 1. The same as Type 5 but with higher degree of fireproofing.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.12 Exiting and doors. (1) Number, type and access to exits.

(a) All CRRF, and each floor level having habitable rooms, shall have at

Register, December, 1978, No. 276
Building and Housing,
Ventilating and Air Conditioning.
least 2 means of exit which provide unobstructed travel to the outside at street or grade level.

1. Exception. A single exit will be permitted from basements, or attics utilized for recreational, non-sleeping purposes only.

2. A wooden balcony or a flat roof, within 10 feet of grade, or an exterior wood stair may serve as one of the required exits from the second floor of a 2-story CBRF, except Class B and C CBRF with nonambulatory residents on the second floor.

(b) Exits shall be standard exits to grade (doors), stairways as specified in section Ind 61.12 (3), or fire escapes. (See exception under section Ind 61.12 (1) (a) 1.)

(c) No exit passageway shall be through a private room or bath/toilet room(s).

(d) Exit passageways and stairways to the outside exits shall be at least 3 feet wide, except existing secondary exit passageways, stairways and doors may be reduced to 2 feet 4 inches in width.

(e) The required width shall be maintained clear and unobstructed at all times.

2. Doors. (a) Outside exit doors and doors in exit access corridors shall be at least 2 feet 8 inches in width, except as provided in section Ind 61.12 (1) (d) for existing secondary exit doors.

(b) All doors shall have such fastenings or hardware that they can be opened from the inside with one hand without the use of a key.

(c) Closet doors shall be openable from the inside.

(d) All interior doors equipped with locks shall be designed to permit opening of the locked doors from either side in case of emergency.

3. Stairs: General. (a) Treads and risers. All required interior and exterior exit stairways shall have a minimum tread width (exclusive of nosing or projection) of 9 inches and a maximum riser height of 8 inches.

1. Exception. Stairs serving basements and attics without habitable rooms may have a minimum tread width (exclusive of nosing or projection) of 8 inches and a maximum riser height of 8 inches.

(b) Handrails. One or more handrails, at least 29 inches above the nose of the tread, shall be provided on all stairways. Handrails shall be provided on the open sides of stairways and platforms.

(c) Winder stairs.

1. Winders in stairways shall be provided with handrails on both sides, at least 29 inches above the nose of the tread.

2. Winders in stairways used as required exits shall have treads of at least 7 inches in width at a point one foot from the narrow end of the tread.

(d) Spiral stairs. Spiral stairs shall be prohibited for use as required exit stairs.
(4) Stairs: enclosure. (a) Three-story CBRF shall have at least one stairway exit, enclosed with at least one-hour rated construction, leading to a first-story outside exit.

(b) CBRF, 4 or more stories in height, shall have all stairways enclosed with at least one-hour rated construction. All required exit stairways shall have such enclosures leading to a first-story outside exit.

Note: Buildings of Type 1 and 2 construction require 2-hour rated stair enclosures in accordance with Ind 61.03 (1) and (2).

(5) Illumination. All exit passageways and stairways shall be capable of being illuminated at all times.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.13 Sizes of rooms. (1) Habitable floor space. (a) Each sleeping room for ambulatory residents shall contain not less than 60 square feet of habitable floor space; and each sleeping room for semiambulatory or nonambulatory residents shall contain not less than 90 square feet of habitable floor space.

(b) In addition to the area required in section Ind 61.13 (1) (a), the CBRF shall provide habitable floor space, other than sleeping rooms, of not less than 60 square feet of area for each ambulatory resident and of not less than 90 square feet in area for each semiambulatory or nonambulatory resident.

(c) All habitable rooms shall have an average ceiling height of not less than 7 feet 0 inches.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.14 Smoke detection. (1) Definitions. (a) Smoke detector. Smoke detector means a device which detects particles or products of combustion other than heat.

(b) Sleeping area. Sleeping area means the area(s) in which bedrooms or sleeping rooms are located. Bedrooms or sleeping rooms separated by other use areas such as kitchens or living rooms, but not bathrooms, are considered as separate sleeping areas for the purposes of this section.

(2) Number of detectors required and location. All CBRF within the scope of this chapter shall be provided with approved smoke detectors. At least one detector shall be provided at the head of every open stair and at the door leading to every enclosed stair on each floor level, including the basement, and in each sleeping area.

Note: The department recognizes smoke detectors listed by Underwriters' Laboratories (UL).

(3) Installation and maintenance. Smoke detectors shall be installed in accordance with the manufacturer's directions and specifications and shall be maintained in good working order.

Note: The department recommends Underwriters' Laboratories standards UL No. 167 and 168 for testing of smoke detectors and National Fire Protection Association standards NFPA No. 72E and No. 74 for maintenance of smoke detectors.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78; r. and ren. Register, December, 1978, No. 276, eff. 4-1-79.
Ind 61.15 Windows. (1) **Minimum size.** Every living and sleeping room shall have outside window(s) with a total sash area of at least 10% of the floor area of the room. The openable area of such windows shall be equal to not less than 5% of the floor area of the room served.

(2) **Minimum opening for sleeping rooms.** At least one window in each sleeping room shall be openable from the inside without the use of tools and shall provide a clear opening of not less than 16 inches in the least dimension.

(3) **Storm windows and screens.** All windows serving habitable rooms shall be provided with storm windows in winter and openable windows serving habitable rooms shall be provided with insect-proof screens in summer.

(a) **Exception.** Insulated windows need not be provided with storm windows.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.16 Privacy. Privacy for sleeping rooms shall be provided by full-height partitions and rigid, swing-type room doors.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.17 Sanitary facilities. (1) **Bath and toilet rooms.** (a) Every CBRF shall have at least 2 separate bath and toilet rooms, or combination bath/toilet rooms, which are accessible from public (non-sleeping) areas.

(b) Door locks shall be provided to ensure privacy.

(2) **Number of fixtures.** Every CBRF shall have at least 2 water closets (toilets), 2 lavatories (sinks) connected to hot and cold water and 2 bathing facilities (bath/tubs or showers) connected to hot and cold water; however, the ratio of occupants to water closets and lavatories shall be not less than one water closet and one lavatory per 8 occupants.

(3) **Location of bath and toilet rooms.** Bath and toilet rooms shall be so distributed that the maximum vertical travel distance to them from sleeping rooms is not more than one floor level.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 61.18 Requirements for barrier-free environment. (1) **Scope.** The requirements of this section are intended to ensure that all CBRF licensed for mentally retarded or physically disabled residents shall be accessible and usable by such residents.

(2) **Definitions.** (a) **Primary floor.** The primary floor is any floor level at least 50% of which is used for habitable floor space.

(3) **Requirements for accessibility.** All CBRF shall comply with the requirements found in Table 61.18.
**DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS**

Ramped or grade-level entrance required if residents are not capable of negotiating stairs.  

*2' 8" doors required if residents in wheelchairs are allowed.*  

*2' 6" sleeping room doors permitted for rooms used by ambulatory residents.*  

*May be omitted if use of other floors is restricted to ambulatory or semiambulatory residents physically capable of negotiating stairs or if there are no one-of-a-kind, common-use areas located on those floors.*  

*Not required in rooms used only by ambulatory residents.*  

*Not required in rooms used only by ambulatory residents or residents not confined to a wheelchair.*

(4) **Ramp Requirements.** Ramps, as required in Table 61.18, shall comply with the following:

(a) **Ramp slope.** Ramps shall have a slope of not more than one foot of rise in 12 feet of run. An interior ramp with a slope of one foot of rise in 8 feet will be permitted. The ramps shall have a slip-resistant surface and shall have no side slope.

(b) **Ramp width.** Ramps shall be at least 4 feet wide, of which not more than 4 inches on each side may be occupied by a handrail.

(c) **Ramp handrails.** Ramps shall have a handrail on each side which shall be at least 2 feet 6 inches high (preferable height, 2 feet 8 inches). Handrails on unenclosed ramps shall include an intermediate parallel rail at mid height.

(d) **Ramp clearance.** Where ramps are provided to doorways, the ramp on each side of the doorway shall be level for a distance of 5 feet from the door.

(e) **Ramp platforms.** Ramps having a 1:8 slope shall have a 5-foot long level platform at 16-foot intervals. Ramps having a 1:12 slope shall have a level platform at 30-foot intervals. Both types of ramps shall have a level platform at least 5 feet long where they turn and at least 5 feet of level clearance at the bottom of the ramps.

*History: Cr. Register, May, 1978, No. 295, eff. 7-1-78.*

Register, December, 1978, No. 275  
Building and Heating,  
Ventilating and Air Conditioning
WISCONSIN ADMINISTRATIVE CODE

Ind 61.19 Kitchen and cooking areas. All CBRF shall have a kitchen or an area set aside for cooking and dining accessible from public (non-sleeping) areas. Kitchens or cooking areas shall be provided with one sink, in good working condition, connected to hot and cold water; utility service connections; and space for a stove and a refrigerator.

History: Cr. Register, May 1978, No. 269, eff. 7-1-78.

Ind 61.20 Fire extinguishers. A portable, dry chemical fire extinguisher, with a minimum 2A, 20 B-C rating, shall be provided on each occupied floor level. On the floor containing the kitchen, the fire extinguisher shall be located in the kitchen or cooking area.

History: Cr. Register, May 1978, No. 269, eff. 7-1-78.

Ind 61.21 Maintenance and cleanliness. All CBRF, and all parts thereof, shall be maintained and kept in good repair, shall be kept clean, and shall also be kept free from any accumulation of dirt, trash or debris.

History: Cr. Register, May 1978, No. 269, eff. 7-1-78.

Ind 61.22 Building service equipment. Each gas line providing service piping connections for appliances shall have a separate shut-off (stop cock) for each appliance served.

History: Cr. Register, May 1978, No. 269, eff. 7-1-78.

Ind 61.23 Potable water and plumbing. Where a public water supply is available it shall be used to provide a continuing and adequate supply of potable water. When a public water system is not available the well, or wells, shall be approved by the department of natural resources. Water samples from an approved well shall be tested at the state laboratory of hygiene, or a state approved laboratory, at least annually. The water supply shall be bacteriologically safe prior to use.

Note: Refer to Wis. Adm. Code chapter H 02 Design, Construction, Installation, Supervision and Inspection of Plumbing, for requirements pertaining to the plumbing system.

History: Cr. Register, May 1978, No. 269, eff. 7-1-78.

Ind 61.24 Heating and ventilating. (1) Heating. (a) General. All occupied rooms in CBRF shall be provided with a permanently connected heating system.

(b) Operation and maintenance. 1. The heating system shall be maintained in a clean and safe condition. A minimum temperature, as specified in the licensing rules, shall be maintained in all CBRF.

2. Replacement equipment shall be of an approved type.

Note: The department recognizes listings of independent testing agencies such as American Gas Association (AGA) and Underwriters Laboratories (UL).

(c) Chimneys and breeching. 1. Chimneys (masonry or factory-built) and breeching shall be kept in good repair and shall be of the type required for the type of connected heating equipment.

2. Every chimney shall be provided with an access panel to permit inspection and servicing.

(d) Clearance to combustibles and combustible construction. 1. Heating equipment shall be installed in accordance with the manufacturer’s recommendations to provide minimum clearance. In the absence
of manufacturer's recommendations, a minimum clearance of 36 inches shall be provided.

a. Exception: Existing installations providing less than 36 inches of clearance will be accepted if there is no physical evidence of problem (charting, etc.).

2. New combustible construction, such as partitions, shelving or storage lockers, shall not encroach upon the required clearance.

(e) Safety features. 1. All oil- and gas-fired equipment shall be provided with automatic controls that will shut off the fuel supply to the burner in case of ignition failure.

2. Steam boilers shall be provided with pressure gauge(s) and safety valve(s).

3. Hot-water boilers shall be provided with pressure-temperature relief valve(s).

4. Fixed electric heating equipment shall be of a type equipped with safety and temperature controls.

5. Gas-fired fireplaces shall be provided with automatic controls that will shut off the fuel supply in case of flame-out and shall be properly vented.

6. Solid-fuel fireplaces shall be equipped with safety screen(s).

(f) Space heaters. Portable and fixed fuel-fired, and portable electric space heaters are prohibited in CBRF.

1. Exception. Fixed, gas-fired pre-vented wall heaters may be used.

(2) VENTILATION: GENERAL REQUIREMENTS. (a) Kitchen or cooking areas. Kitchens or cooking areas shall be provided with at least one operable outside window, an exhaust fan vented to the outside, or a means of filtered mechanical air circulation.

(b) Bath and toilet rooms. Bath and toilet rooms shall have at least one operable outside window at least 2 square feet in area, or a mechanical or gravity exhaust vented to the outside, or an approved ductless exhaust fan.

History: Cr. Reg. 1976, No. 260, eff. 7-1-78.

Ind 61.25 Electrical. (1) General. (a) Every CBRF shall be supplied with electrical service, wiring, outlets and fixtures which shall be properly installed and shall be maintained in good and safe working condition.

(b) The electrical service shall be of the proper size to handle the load connected to it.

Note: As a guide to the owner/operator for determining the adequacy of existing electrical service, the habitable rooms should have electrical service capable of providing at least 3 watts per square foot of total floor area in addition to that provided for air conditioning, ranges, fixed electric heaters and motor-driven equipment 1 hp or over.

(2) Protection. The branch circuits shall be protected by S-type or equivalent safety type, tamper-proof fuses, or circuit breakers not to exceed the ampacity of the smallest wire size in the circuit.
(3) Minimum number of fixtures and outlets. The minimum number of fixtures and outlets shall be as follows:

(a) Every lavatory, bathroom, kitchen or kitchenette, dining room, laundry room, and furnace room shall contain at least one approved ceiling or wall-type electric light fixture equipped with sufficient lamps or tubes to provide no less than 5 footcandles at floor level at center of room. Where more than one fixture is used or required, they shall be equally spaced as far as practicable. (A switched outlet may be substituted for ceiling or wall fixture in lavatories, bathrooms and dining rooms.)

(b) Electric duplex outlet receptacles shall be provided as follows. (To determine room area, measurements shall be taken at room perimeter and shall include doors and door-alcoves.)

1. Living room, one per 75 sq. ft. of floor area or major fraction (minimum of 2).

2. Dining room, one per 75 sq. ft. of floor area or major fraction (minimum of 2).

3. Kitchen, one per 8 linear feet or fraction of countertop and preparation area, including island-type areas. In addition, kitchens used for dining purposes, one per 75 sq. ft. of floor area or major fraction. Separate outlets shall be provided for refrigerators.

Note: Preparation areas include countertops and all other similar areas at counter height.

4. Bedroom, one per 75 sq. ft. of floor area or major fraction (minimum of 2).

5. Laundry, one.

6. Toilet rooms, one (may be part of wall fixture if 72 inches or less from floor).

7. Other habitable rooms, minimum of 2.

(4) Outlet and switch locations; exposed wiring. (a) Outlets. Convenience outlets shall be located to discourage use of extension cords.

(b) Switches. Switches or equivalent devices for turning on one light in each room or passageway shall be located so as to conveniently control the lighting in the area.

(c) Exposed wiring. All temporary wiring and exposed, abandoned wiring shall be removed.

History: Cr. Register, May, 1978, No. 209, eff. 7-1-78.

Ind 61.26 Retroactivity. The rules of this chapter shall apply to buildings with occupancies under the scope of this chapter now in existence and to buildings hereafter converted to use as a CRRF.

History: Cr. Register, May, 1978, No. 209, eff. 7-1-78.

Ind 62.41 Electrical requirements (p. 240)

Ind 62.001 Scope. This classification includes all specialty occupancies as indicated in the scope of each subpart of this code.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.10 Definitions. (1) ENCLOSED PARKING STRUCTURE. Parking structures which do not satisfy the definition of open parking structure [Ind 62.10 (2)] are considered hazardous occupancies (see section Ind 54.50 for specific requirements).

Note: The department is currently working with a project committee to develop rules for enclosed parking structures.

(2) OPEN PARKING STRUCTURE. An open parking structure is used for the parking of passenger vehicles and has open areas in exterior walls and ventilation shafts, if any, on each level of at least 4% of the total floor area of that level distributed on at least 2 exterior sides. Facilities for repairing or fueling vehicles within the structure are prohibited. One lower level may be partially or fully enclosed if mechanical ventilation is provided at a minimum rate of ½ CFM per square foot and exits are so distributed to offer 2 directions of egress. Open parking structures are classified as either ramp access or mechanical access.

(a) Ramp access. Ramp access, open parking structures employ a series of continually sloped floors or a series of interconnected ramps between floors permitting the movement of vehicles under their own power between the street level and parking areas.

(b) Mechanical access. Mechanical access, open parking structures employ fully automated parking machines, lifts, elevators or other mechanical devices for moving vehicles between the street level and the parking area, and in which public occupancy is prohibited above street level.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.
PART I — OPEN PARKING STRUCTURES

Ind 62.20 Scope. This classification provides the minimum requirements for the design and construction of open parking structures as defined in section Ind 62.10 (2).

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.21 Construction requirements. (1) Materials. All structural elements shall be of noncombustible materials.

(2) Floors. Floors shall be provided with positive surface drainage.

Note #1: Structural components of open parking structures are subjected to corrosive and deteriorating elements. The designer should consider the effects of such elements and should consider the use of air-entrained concrete, concrete sealers and sealants, additional cover for reinforcing and other accepted engineering practices to protect the components.

Note #2: The department recommends a minimum slope of 1/2.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.22 Setbacks. Open parking structures may be erected without enclosing walls, except that enclosing walls of not less than 2-hour fire-resistant construction, as specified in section Ind 51.04, shall be provided on all sides which are less than 10 feet from a property line between premises or any other building.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.23 Separation from other occupancies. Every open parking structure shall be separated from any other occupancy by noncombustible 2-hour (NC-2) rated construction, or better, except as specified in section Ind 55.05. (With respect to Ind 55.05, open parking structures are considered nonhazardous.) All openings in the wall to adjoining occupancies shall be protected by means of self-closing, fire-resistant doors as specified in section Ind 51.047.

Note: It is also the intent of this section to consider office and building maintenance areas used in conjunction with the operation of the open parking structure as distinct occupancies requiring 2-hour separation.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.24 Construction, height and allowable area. (1) Construction and height. Open parking structures shall be of the type of construction and shall not exceed the height as specified in this section. The maximum floor area, per level, of any such structure shall not exceed that permitted for the corresponding type of construction and height as follows:

(a) Open parking structures of noncombustible zero-hour (NC-0) rating shall not exceed 70 feet in height or 700,000 square feet in total area.

(b) Open parking structures of noncombustible 2-hour rating or better shall not be limited in height or area per floor level. Exterior walls need not be rated, except as provided in section Ind 62.22.

Note: Open parking structures in excess of 60 feet in height are exempt from the administrative rules and standards requiring automatic fire sprinkler systems (see Ind 32.01 (1) and (2) and s. 101.14, Stats.).

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Ind 62.25 Clearance limitations. (1) * Principal vehicle and pedestrian traffic areas. The clear height of each floor level in principal vehicle and pedestrian traffic areas shall be not less than 7 feet 0 inches.

(2) Clearance signs. Clearance limitation signs shall be prominently posted at all vehicle entrances.

Note: A lesser clear height may be permitted in mechanical-access open parking structures when approved by the department.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.26 Number, location and type of pedestrian exits. (1) Number of exits. Every open parking structure and every floor level thereof shall have at least 2 exits.

(2) Distance to exits. Additional exits shall be provided so that no part of the open parking structure will be more than 200 feet distant to the exit discharge grade or to a stair enclosure if the walls separating the stair from the open parking structure are of at least noncombustible one-hour (NC-1) rating or better and the enclosure is continuous to an outside exit.

Note: In all cases, required exit stairs are required to be enclosed (see Ind 62.27). If the designer elects to increase the exit distance by measuring to the stair enclosure, the enclosure must have at least a noncombustible one-hour (NC-1) rating.

(3) Location of exits. Exits in all open parking structures shall be placed as far apart as practicable and so located that if any exit is blocked, some other exit will still be available from every part of the structure.

(4) Type of exits. At least one-half of the exits required in this section shall be standard exits to grade, stairways or horizontal exits as specified in sections Ind 51.15, 51.16 and 51.19, respectively. The other exits may be non-parking access ramps with a maximum slope of 1:8.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78; am. (4), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 62.27 Stairway enclosures. Stair enclosures of NC-O hour rating, or better, shall be provided for all required exit stairways, unless otherwise required to be rated.

Note: It is the intent of this rule to require all required exit stairs to be enclosed. If the designer elects to measure the exit distance to the stair enclosure, the enclosure must be then rated. (See Ind 62.28 (2).)

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.28 Handrails and guardrails. (1) Handrails. (a) Handrails, or equivalent, not less than 3 feet 6 inches in height, conforming to the requirements of section Ind 51.16 (5) (f), shall be provided on all open sides of the structure on each level.

(b) Handrails as specified in Ind 62.28 (1) (a) shall be provided at changes of elevation within the structure when the clear vertical opening at the elevation change is one foot 6 inches or greater.

(2) Perimeter guardrails. (a) Perimeter guardrails shall be installed at the end of drive lanes and shall be designed for a minimum

*See Appendix A for further explanatory material.
horizontal live load of 1000 pounds per lineal foot acting at 18 inches above the floor level.

(b) Perimeter guardrails shall be installed at the end of parking stalls and shall be designed for a minimum horizontal live load of 500 pounds per lineal foot acting at 18 inches above the floor.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.29 Illumination and exit lights. (1) ILLUMINATION LEVELS. Minimum illumination levels at a horizontal plane 30 inches above the floor shall conform to the requirements of Table 62-I.

(2) EXIT LIGHTS. Every required exit from each floor shall be indicated by an approved illuminated exit sign bearing the word EXIT or OUT in plain letters not less than 5 inches in height.

**TABLE 62-I**

**MINIMUM ILLUMINATION LEVELS**

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.30 Fire protection. (1) STANDBIPES. Fire department standpipes shall be provided in all open parking structures more than 2 levels in height.

(a) Such standpipes shall be dry standpipes and are not required to be interconnected.

1. Exception. Standpipes which are not accessible to the fire department at grade level shall be interconnected to an accessible standpipe.

(b) Standpipes shall be provided in each stair enclosure and shall be provided with a siamese connection at each floor level with one connection in the stair towers and one immediately outside.

(c) Such standpipes shall conform to the requirements outlined in section Ind 51.21 (3) (c) through (i).

(d) Exceptions: 1. The department will recognize special considerations in lieu of standpipes in structures up to 60 feet in height.

2. The department will accept open parking structures without standpipes if clearances are provided to allow fire-fighting vehicles access throughout the structure.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78; am. (1) (d) 2., Register, December, 1978, No. 278, eff. 1-1-79.

Ind 62.31 Sanitary facilities. (1) UNATTENDED PARKING STRUCTURES. Sanitary facilities need not be provided in unattended parking structures.

Register, December, 1978, No. 278
Building and heating, ventilating, and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 239

(2) ATTENDED PARKING STRUCTURES. Sanitary facilities for employees shall be provided in accordance with section Ind 54.12 in attended parking structures.

Note: Sanitary facilities for patrons need not be provided.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.32 Isolation of hazards. (1) FIRE PROTECTION. Boilers, furnaces and all open-flame equipment within parking structures shall be isolated from the rest of the parking structure by at least a 2-hour fire-resistant enclosure as specified in section Ind 51.04.

(2) PROTECTION OF OPENINGS. All openings in such enclosure shall be protected with self-closing fire-resistant doors as specified in section Ind 51.047.

(3) SUSPENDED EQUIPMENT. Space heaters, suspended furnaces, and direct-fired unit heaters, fired with various fuels, may be used without an enclosure where approved by the department. Where such equipment is used without an enclosure, they shall be located at least 8 feet above the floor.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.33 Exceptions for mechanical access open parking structures. Mechanical access open parking structures need not comply with sections Ind 62.25 - 62.29, inclusive.

History: Cr. Register, December, 1977, No. 264, eff. 1-1-78.

Ind 62.34 Barrier-free requirements. (1) PARKING SPACES. Accessible parking spaces shall be provided in accordance with the applicable requirements specified in section Ind 52.04 (3) (a).

(2) TOILET FACILITIES. Toilet facilities provided for the employees, as specified in section Ind 62.31 (2), shall comply with the requirements of section Ind 52.04 (4) (c).

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

PART II—TELEVISION AND RADIO TRANSMITTING AND RECEIVING ANTENNA

Ind 62.35 Scope. The requirements of this part shall apply to the outdoor portion of all apparatus, more than 12 feet in height, used for transmitting and receiving television or radio waves.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 62.36 Construction requirements. All television and radio antenna systems, including the supporting tower or mast, shall be constructed of galvanized steel or other corrosive-resistant noncombustible material. Where approved by the department, towers constructed of wood or wood poles set in the ground may be used to support antenna systems, but no wood tower or wood pole may be mounted on the roof of any building structure.

History: Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 62.37 Design loads. The antenna and tower shall be designed to support the dead load of the structure plus an ice load at least 1/2-inch in
radial thickness. The ice load shall be computed only upon the wires, cables, messengers and antenna.

(1) WIND LOADS. The tower or mast shall be braced or guyed and anchored to resist a horizontal wind pressure of not less than 50 pounds for every square foot (net area) of exposed surface. Guy wires shall not be anchored to a chimney or to any roof ventilator or vent pipe.

**History:** Cr. Register, December, 1978, No. 275, eff. 1-1-79.

**Ind 62.38 Antenna systems on buildings.** Antenna systems installed on the roof of a building shall not be supported by or attached to a chimney. All such installations shall be mounted on an independent platform or base and anchored in place. The platform or base of the tower shall be sized to distribute the weight of the structure so the roof construction will safely support the weight of the structure in addition to the required live and dead roof loads.

**History:** Cr. Register, December, 1978, No. 278, eff. 1-1-79.

**Ind 62.39 Setbacks.** All antenna systems shall be so installed that no part of the structure will be nearer to a street, or other public thoroughfare, than the height of the antenna as measured from its platform or base to the topmost point. No wires, cables, or guy wires shall extend over any street or other public thoroughfare or over any electric power or communication lines.

**History:** Cr. Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 62.40 Antenna system support.** Poles used for electric power or for communication lines shall not be used for supporting or for guying any antenna system. Where antenna installations are so located that damage will be caused to adjacent power or communication lines by the falling of the antenna structure, a separate safety wire shall be attached to the top of the tower and secured in a direction away from the power or communication lines.

**History:** Cr. Register, December, 1978, No. 276, eff. 1-1-79.

**Ind 62.41 Electrical requirements.** Electrical installations in connection with antenna systems, including the grounding of the tower or mast, shall comply in all respects with the requirements of the Wisconsin state electrical code.

**History:** Cr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 63.50 Utilizing solar, geothermal, wind or other non-depletable energy source (p. 254)
Ind 63.51 Documentation (p. 255)

PART VIII SYSTEM ANALYSIS DESIGN

Ind 63.60 Annual energy consumption (p. 255)
Ind 63.61 Simulation (p. 255)
Ind 63.62 Documentation (p. 256)

PART I--SCOPE AND PURPOSE

Ind 63.001 (1) General. The provisions of this chapter shall apply to all public buildings and places of employment. These provisions are not retroactive unless specifically stated in the administrative rule. Where different sections of this chapter specify different requirements, the most restrictive requirement shall govern.

(2) Exempt buildings and structures. Buildings and structures, or portions thereof, which are neither heated nor cooled are exempt from the requirements of this chapter.

(3) Applications to existing buildings. (a) Additions to existing buildings or structures may be made without making the entire building or structure comply, but the addition shall comply with the requirements of this chapter.

(b) Any change of occupancy or use of any existing building or structure within the scope of this chapter which would require an increase in energy consumption shall not be permitted unless such building or structure is made to comply with the requirements of this chapter.

Note: It is the intent of the department to have every new building or addition and every change of occupancy in accordance with the energy conservation requirements of this chapter. It is not the intent to prevent a previously built building from installing air conditioning, nor to cause equipment with several years of remaining service life be discarded due to not being able to meet the required efficiencies of this chapter. However, occupancy changes such as building a

Register, December, 1978, No. 270
Building and Heating,
Ventilating and Air Conditioning
WISCONSIN ADMINISTRATIVE CODE

warehouse and later remodeling it into an office space will not be permitted unless all the requirements of this chapter are met.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 63.002 purpose. The purpose of this chapter is to provide design requirements which will promote efficient utilization of energy in public buildings and places of employment.

(1) GENERAL. The intent of this chapter is to provide minimum requirements for construction and equipment to conserve energy.

(2) FLEXIBILITY IN USE. It is intended that this chapter be flexible and permit the use of innovative approaches and techniques to achieve effective utilization of energy.

(3) CONFLICT WITH OTHER RULES. This chapter is not intended to conflict with any safety or health requirements. Where such conflict occurs, the safety and health requirements shall govern.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 63.001 Plans and specifications. (1) ARCHITECTURAL AND MECHANICAL. Architectural and mechanical plans and specifications shall be submitted in accordance with the requirements outlined in sections Ind 50.07 and Ind 50.12 and shall contain details and data to demonstrate compliance with the requirements of this chapter. Such information shall include, but is not limited to: design criteria, exterior envelope component materials, resistance values of insulating materials, and the thermal performance value of the building envelope. Size and type of equipment, system and equipment controls and equipment efficiencies shall be submitted with the mechanical plans.

Note: The resistance values for insulating materials are expressed in Fahrenheit degrees per Btu/hour (square foot).

(2) ELECTRICAL. At least 3 sets of electrical plans and specifications shall be submitted for review and approval for all buildings in excess of 25,000 cubic feet. Plans and specifications shall contain information to demonstrate compliance with the requirements of this chapter. Such information shall include, but is not limited to: lighting wattages and calculations, switching, metering, and controls.

Note: The review of electrical and lighting plans will be for the sole purpose of determining compliance with the applicable energy conservation rules of this chapter. The review will not include determination of compliance with the Wisconsin State Electrical Code, Volume 2.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78; am. (1), Register, December, 1978, No. 276, eff. 1-1-79.

PART II—DEFINITIONS

Ind 63.02 Definitions. (1) COEFFICIENT OF PERFORMANCE (COP). Coefficient of performance is the ratio of net energy output to the net energy input, expressed in consistent units and under standard rating conditions.

(2) COOLING LOAD. Cooling load is the rate at which heat must be removed from the space to maintain a selected indoor air temperature.

(3) ENERGY. Energy is the capacity for doing work; taking a number of forms which may be transformed from one into another, such as thermal
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

(heat), mechanical (work), electrical, and chemical; in customary units, measured in kilowatt hours (kwh) or British thermal units (Btu).

(4) ENERGY EFFICIENCY RATIO (EER). The energy efficiency ratio is the ratio of net cooling capacity in Btu per hour to total rate of electric input in watts under designated operating conditions.

(5) NONDEPLETABLE ENERGY SOURCES. Nondepletable energy sources are sources of energy (excluding minerals) derived from incoming solar radiation, including photosynthetic processes; from phenomena resulting therefrom, including wind, waves and tides, lake or pond thermal differences; and energy derived from the internal heat of the earth, including nocturnal thermal exchanges.

(6) RECOVERED ENERGY. Recovered energy is the energy utilized which would otherwise be wasted from an energy utilization system.

(7) SERVICE WATER HEATING. Service water heating is the supply of hot water for domestic or commercial purposes other than comfort heating and processing.

(8) THERMAL PERFORMANCE. Thermal performance is the design heat loss, excluding infiltration and ventilation, through above-grade gross walls and roofs facing heated interiors.

(9) ZONE. A zone is a space or group of spaces within a building with heating or cooling requirements sufficiently similar so that comfort conditions can be maintained throughout by a single controlling device. As a minimum, each floor of a building shall be considered as a separate zone.

History: Cr. Register, May, 1978, No. 259, eff. 7-1-78.

PART III—DESIGN CONDITIONS

Ind 63.10 Scope. The criteria of this part establish the minimum requirements for the thermal design of the exterior envelope of buildings and establish criteria for the design of the heating, ventilating and air-conditioning systems and their parts.

History: Cr. Register, May, 1978, No. 259, eff. 7-1-78.

Ind 63.11 General requirements. (1) BUILDING USE. When a building houses more than one use, each portion of the building shall conform to the requirements for the use housed therein.

(2) MOISTURE CONDENSATION. The design of buildings for energy conservation shall not create conditions of accelerated deterioration from moisture condensation.

(3) INFILTRATION. All exterior windows and doors shall be designed to limit air leakage into or from the building.

(4) DESIGN TEMPERATURE DIFFERENTIALS. (a) Winter. The winter design temperature differential shall be determined using the indoor design temperature as given in Table I of chapter Ind 64 and the outdoor design temperature as given in the following Figure 1.
(b) Summer. The summer design temperature differential shall be determined using an indoor design temperature of 78°F and the outdoor design temperature as given in the following Figure 1.

History: Cr. Register, May, 1978, No. 268, eff. 7-1-78.

Ind 63.12 Design criteria. (1) THERMAL PERFORMANCE. The thermal performance values for the exterior envelope of the building shall be as specified in Table 63.12-A.

**TABLE 63.12-A**

†Expressed in Btu/hour/square foot of above-grade exterior envelope.
(a) **Exception.** The thermal performance value may be increased provided the U-value for floors over unheated spaces is decreased so that the total heat gain or loss for the entire building envelope and floor area does not exceed the total heat gain or loss resulting from conformance to the values specified in (1) and (2) of this section.

(2) **Floors over unconditioned spaces.** The overall heat transmission coefficient (U-value) for floors of heated or mechanically cooled spaces over unconditioned spaces shall not exceed 0.08 Btu/H·F·F°.

(3) **Slab-on-grade perimeter insulation.** For slab-on-grade floors, the thermal resistance of the insulation around the perimeter of the floor shall not be less than the values shown in Table 63.12-B. The insulation shall extend downward from the top of the slab for a minimum distance of 24 inches, or downward to the bottom of the slab then horizontally beneath the slab for a minimum total distance of 24 inches.

History: Cr. Register, May, 1978, No. 969, eff. 7-1-78.

Ind 63.21 Controls. Heating and cooling equipment shall be provided with controls which will automatically reset the supply air temperatures to maintain the lowest energy use and still satisfy the occupancy requirements.

1. ZONE HEATING AND COOLING. Simultaneous heating and cooling by reheating or recouling supply air or by concurrent operation of independent heating and cooling systems serving a common zone shall be in accordance with the following:

(a) Reheat systems: Single zone reheat systems shall be controlled to sequence reheat and cooling. Multiple reheat systems serving multiple zones, other than those employing variable air volume for temperature control, shall be provided with controls that will automatically reset the system cold air supply to the highest temperature level that will satisfy the zone requiring the coolest air.

(b) Dual duct and multi-zone systems. These systems shall be provided with control(s) that will automatically reset:

1. The cold deck air supply to the highest temperature that will satisfy the zone requiring the coolest air, and

2. The hot deck air supply to the lowest temperature that will satisfy the zone requiring the warmest air.

(c) Recooling systems: Systems in which heated air is recouled, directly or indirectly, to maintain space temperature shall be provided with controls that will automatically reset the temperature to which the
supply air is heated to the lowest level that will satisfy the zone requiring the warmest air.

1. Exception. A multiple zone heating, ventilating and air-conditioning system that employs reheating or recooling for control of not more than 5,000 cfm or 20% of the total supply air of the system, whichever is less, shall be exempt from the supply air temperature reset requirements of Ind 63.21 (f) (a), (b) and (c).

(d) Heat pump supplemental heater. The heat pump shall be installed with a control to prevent supplemental heater operation when the heating load can be met by the heat pump alone. A two-stage thermostat, which controls the supplementary heat on its second state, will be accepted as meeting this requirement. The cut-on temperature for the compression heating shall be higher than the cut-on temperature for the supplementary heat, and the cut-off temperature for the compression heating shall be higher than the cut-off temperature for the supplementary heat.

Note: Supplemental heater operation is permitted during transient periods, such as startups, following room thermostat set point advance, and during defrost.

(2) Concurrent operation. Concurrent operation of independent heating and cooling systems serving common spaces and requiring the use of new energy for heating or cooling shall be minimized by one or both of the following:

(a) Providing sequential temperature control of both heating and cooling capacity in each zone;

(b) Limiting the heating energy input through automatic reset control of the heating medium temperature (or energy input rate) to only that necessary to offset heat loss due to transmission and infiltration and, where applicable, to heat the ventilation air supply to the space.

(3) Thermostat. At least one thermostat for regulation of space temperature shall be provided for:

(a) Each separate heating, ventilating and air-conditioning system;

(b) Each separate zone. A readily accessible manual or automatic means shall be provided to partially restrict or shut off the input of the heating, cooling, or both, to each floor.

Note: On multi-story buildings where the perimeter system offsets only the transmission losses of the interior walls, an entire side of the uniform exposure may be zoned separately.

History: Cr. Register, May, 1978, No. 209, eff. 7-1-78.

Ind 63.22 Insulation. (1) Air-handling duct insulation. All ducts, plenums and similar enclosures installed in or on buildings shall be insulated as follows:

(a) All duct systems, or portions thereof, shall be insulated to provide a thermal resistance, excluding film resistances, of:

\[ R = \frac{\Delta T}{15} \text{ H·ft}^2\cdot\text{F}/\text{Btu} \]

Where \( \Delta T \) = the design temperature differential between the air in the duct, plenum or similar enclosure and the surrounding air in °F.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

(b) Exceptions. Duct insulation is not required:

1. Where \( \Delta T \) is 25° F or less;

2. When the heat gain or loss of the ducts, plenums and similar enclosures, without insulation, will not increase the energy consumption of the building.

(2) PIPE INSULATION. All piping within buildings shall be thermally insulated to achieve at least the equivalent insulation values of Table 63.22.

**TABLE 63.22**

**MINIMUM PIPE INSULATION**

(The thickness values specified in this table are based on insulation having thermal resistance in the range of 4.0 H-Ft\(^2\)-F°/Btu to 4.6 H-Ft\(^2\)-F°/Btu per inch of thickness)

† Run-outs not exceeding 12 feet in length in individual terminal units.

History: Cr. Register, May, 1978, No. 209, eff. 7-1-78.

Ind 63.23 Cooling with outdoor air in conjunction with mechanical cooling systems (economizer cycle) (1) OUTDOOR AIR. Each fan system shall be designed to use up to and including 100% of the fan system capacity for cooling with outdoor air automatically whenever its use will result in lower usage of new energy. Activation of economizer cycle shall be controlled by sensing outdoor air enthalpy and dry bulb temperature jointly, or outdoor air dry bulb temperature alone.

(a) Exception. Cooling with outdoor air is not required when the fan system capacity is less than 2,000 cfm or 60,000 Btu per hour total cooling capacity.

Note: It is the intent of this section to require cooling with outdoor air for nominal 0-ton units or larger.

History: Cr. Register, May, 1978, No. 209, eff. 7-1-78.

Ind 63.24 Maintenance. Equipment shall be labeled to clearly state the required regular maintenance. Such label may be limited to identifying, by title or publication number, the operation and maintenance

Register, December, 1978, No. 276
Building and Heating,
Ventilating and Air Conditioning
manual for that particular model and type of product. Maintenance instructions shall be furnished for any equipment which requires preventive maintenance for efficient operation.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

**PART V—WATER HEATING**

**Ind 63.30 Purpose.** The purpose of this part is to provide energy conservation criteria for the design and equipment selection for service water heating.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

**Ind 63.31 Water heaters, storage tanks and boilers. (1) Combination service water heating/space heating boilers.** Space heating boilers shall not be used for service water heating from May 1 to September 30 unless the service water heating load equals or exceeds 30% of the net boiler load.

(2) **Temperature controls.** Service water heating systems shall be equipped with automatic temperature controls capable of adjustment from the lowest to the highest acceptable temperature settings for the intended use.

**Note:** The department recognizes the values specified in Table 1, ASHRAE Handbook and Product Directory, Systems Volume, Chapter 37.

(3) **Shut down.** A separate means shall be provided to permit turning off the energy supplied to service water heating systems.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

**Ind 63.32 Conservation of hot water. (1) Showers.** Showers used for other than safety reasons shall be equipped with flow control devices to limit total flow to a maximum of 3 gallons per minute per shower head.

(2) **Lavatories.** Lavatories (washbasins) in toilet rooms of nonresidential public buildings shall be equipped with outlet devices which limit the flow of hot water to a maximum of 0.5 gallons per minute for mixing devices and a maximum of 1.0 gallon per minute for nonmixing devices.

**Note:** The requirements of (1) and (2) of this section will be enforced by the department of health and social services as they relate to plumbing fixtures and materials. The same rules will be included in Wis. Admin. Code chapter H 62—Design, Construction, Installation, Supervision and Inspection of Plumbing.

(3) **Heated swimming pools.** Heated swimming pools shall comply with the following:

(a) Heated swimming pools shall be equipped with controls to limit heating water temperatures to no more than 80°F, except for pools used for therapeutic purposes.
(b) Unenclosed heated pools shall be controlled so that the electric resistance or fossil-fueled pool water heating systems are inoperative from September 15 to May 15.

*Note:* The requirements of (3) of this section will be enforced by the department of health and social services. The same rules will be included in Wis. Admin. Code chapter H 73 Users of Indoor or Outdoor Artificial Swimming Pools.

**Ind 63.33 Insulation.** (1) STORAGE TANKS. Heat loss from unfired hot water storage tanks shall be limited to 15 Btu per hour per square foot of external tank surface area. The design ambient temperature shall be no higher than 65°F.

(2) PIPING. Piping heat loss for recirculation systems shall be limited to a maximum of 25 Btu per hour per square foot of external pipe surface for above-ground piping and a maximum of 35 Btu per hour per square foot of external pipe surface for underground piping. Maximum heat loss shall be determined at a temperature equal to the maximum water temperature minus a design ambient temperature no higher than 65°F.

**History:** Cr. Register, May, 1978, No. 269, eff. 7-1-78.

**PART VI—ILLUMINATION**

**Ind 63.40 Distribution.** (1) POWER FACTOR. Utilization equipment rated greater than 1,000 watts and lighting equipment greater than 30 watts, with an inductive reactance load component, shall have a power factor of not less than 85% under rated load conditions. Utilization equipment with a power factor of less than 85% shall be corrected to at least 90% under rated load conditions.

(2) LIGHTING SWITCHING. Switching shall be provided for each lighting circuit, or for portions of each circuit, so that the partial lighting required for custodial or for effective complementary use with natural lighting may be operated selectively.

*Note:* For purposes of energy conservation, the department recommends separate metering for energy usage for each tenant in any multi-tenant residential building. Where local codes and regulatory agencies permit, tenants should be financially responsible for the energy they use. This recommendation does not include college dormitories, hotels and other transient facilities.

**History:** Cr. Register, May, 1978, No. 269, 7-1-78.

**Ind 63.41 Lighting.** The building lighting shall be designed in accordance with one of the following methods:

(1) LIGHTING POWER BUDGET. For purposes of establishing a budget, the power allowed for the lighting load shall not exceed the value for the space use as indicated in Table 63.41. Each area of space shall be multiplied by its maximum lighting load respective value as indicated in Table 63.41. This calculation shall be made for all areas of the building and these values shall be summed to yield a total allowable lighting wattage. This total allowable lighting wattage is the maximum amount of lighting power for the building, which may then be allocated as desired provided this value is not exceeded.

(a) Exception. The following areas or classes of lighting equipment may be exempt from the criteria of (1) of this section:

*Register, December, 1978, No. 276*

**Building and Heating, Ventilating and Air Conditioning**
1. Local task lighting fixtures applied to an individual location with switching under the user's immediate control, such as, but not limited to, a portable desk lamp, a work light on a machine, or a hospital examination light.

2. Lighting for special applications where the lighting is an essential technical element for the function performed, such as theatrical performances and spectator sports.

(2) ILLUMINATION BUDGET. If the total allowable lighting wattage value determined by the calculations outlined in (1) above is exceeded, then the illumination shall be determined by a method acceptable to the department.

Note: The department will accept calculations in accordance with chapter 9 of the ASHRAE 90-76 standard.

Note: The material in this section is not intended to be used as a lighting design procedure. The purpose of this section is solely to outline a procedure for determining the maximum power limits for the lighting. It is recommended that lamps of the highest efficiency be used, except where areas or tasks require good to high color rendition.

History: Cr. Register, May, 1978, No. 209, eff. 7.1. 78.

Ind 63.42 Controls. Circuiting and switching or dimming shall be provided so that lighting can be turned off when a space is empty and not used or so that lighting can be reduced or turned off (manually or automatically) where daylight is adequate and can be used effectively.

Note: The department recommends that switching, circuiting or dimming be provided for lighting in task areas larger than 100 square feet to reduce the lighting level by at least one-half when the task is not being performed or is relocated.

History: Cr. Register, May, 1978, No. 209, eff. 7.1. 78.

PART VII—NONDEPLETABLE ENERGY SOURCE

Ind 63.50 Buildings utilizing solar, geothermal, wind or other nondepletable energy source. Any building, or portion thereof, utilizing any nondepletable energy source shall meet all the requirements of this chapter. An energy credit will be given to the building envelope in
the amount of the net nondepletable energy collected. The nondepletable energy must be derived from a specific collection, storage and distribution system, which may include active and passive systems.

Note: An energy credit to the building envelope in the amount of the net recovered energy will be given to the use of recovery systems which will conserve energy, provided the amount expended is less than the amount recovered when the energy transfer potential and the operating hours are considered.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 63.51 Documentation. Proposed alternative designs, submitted as variations to the standard design criteria, shall be accompanied by an energy analysis. This department will accept alternative systems designed according to the requirements of nationally recognized agencies.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

PART VIII—SYSTEM ANALYSIS DESIGN

Ind 63.60 Annual energy consumption. A building designed in accordance with this part will be deemed as complying with this chapter if the calculated annual energy consumption is not greater than a similar building with enclosure elements and energy consuming systems designed in accordance with parts I through VI of this chapter. If the proposed alternative design results in an increase in consumption of one energy source and a decrease in another energy source, the difference in each energy source shall be converted to equivalent energy units for purposes of comparing the total energy used.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.

Ind 63.61 Simulation. The calculation procedure used to simulate the operation of the building and its service systems through a full year operating period shall be detailed to permit the evaluation of the effect of system design, climatic factors, operational characteristics, and mechanical equipment on annual energy usage. Manufacturer’s data or comparable field test data shall be used when available in the simulation of all systems and equipment. The calculation procedure shall be based upon 8,760 hours of operation of the building and its service systems and shall utilize the following input:

(1) CLIMATIC DATA: Coincident hourly data for temperatures, solar radiation, wind and humidity of typical days in the year representing seasonal variation.

(2) BUILDING DATA: Orientation, size, shape, thermal mass, air moisture and heat transfer characteristics.

(3) OPERATIONAL CHARACTERISTICS: Temperature, humidity, ventilation, illumination, control mode for occupied and unoccupied hours.

(4) MECHANICAL EQUIPMENT: Design capacity, partial load profile.

(5) BUILDING LOADS: Internal heat generation, lighting, equipment, number of people during occupied and unoccupied periods.

History: Cr. Register, May, 1978, No. 269, eff. 7-1-78.
Ind 63.62 Documentation. Proposed alternative designs, submitted as requests for exception to the standard design criteria, shall be accompanied by an energy analysis comparison report. The report shall provide technical detail on the building and system design and on the data used.

History: Cr. Register, May, 1978, No. 208, eff. 7-1-78.

Register, December, 1929, No. 276
Building and heating, ventilating and air conditioning code
PART I—SCOPE

Ind 64.01 Scope. All heating, ventilating and air conditioning systems shall be designed, installed, maintained and operated so as to provide the service and results required within the provisions of this chapter. The minimum requirements established in each part of this chapter shall be complied with as they apply to that specific public building or place of employment. The administrative rules pertaining to energy conservation may be applied retroactively to existing buildings.

Note: Compliance with this code shall not constitute assurance of proper installation or operation of the heating, ventilating and air conditioning system. This code is not to be used as a design manual, but it is established as a minimum standard for safety, health and general welfare of the public.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 64.02 Approval of drawings and specifications. All drawings and specifications shall be submitted to the department in accordance with the provisions of sections Ind 50.07 and Ind 50.12.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. Register, December, 1976, No. 252, eff. 1-1-77.

PART II—DESIGN REQUIREMENTS

Ind 64.03 Design. (1) Building heat loss. The total building heat loss shall be equal to the sum of the building transmission losses and infiltration and/or ventilation losses, whichever are greater.

(2) Heating system design. The heating system shall be designed on the basis of the losses determined by (a) or (b) below, whichever is greater. Credit will be given for internal heat gains against the total design loss of the heating system, provided the heat gains are demonstrated by the designer.

(a) Occupied periods. The heating system shall be designed to equal building transmission losses and infiltration and/or ventilation losses during occupied periods; or

(b) Unoccupied periods. The heating system shall be designed to equal building transmission losses and infiltration losses during unoccupied periods.

(3) Capacity and Arrangement. The calculated capacity and the arrangement of all installations for required heating and ventilating shall be based upon simultaneous service to all parts of the building unless otherwise exempted by this code.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.04 Outside temperature design conditions. In the accompanying map, the state of Wisconsin has been divided into 4 zones. The maximum heat losses for a heating system shall be calculated on the basis of the outdoor temperatures indicated on the map with reference to location of the project.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS

Heating, Ventilating and Air Conditioning

MAP OF WISCONSIN SHOWING REGIONAL TEMPERATURE ZONES

Zone 1: -22°F below Zone 5
Zone 2: -10°F below Zone 4
Zone 3: 4°F below Zone 5
Zone 4: -10°F below Zone 2

Register, December, 1978, No. 278

Building and heating, ventilating
and air conditioning code
Ind 64.05 Inside design temperatures and ventilation requirements. (1) INSIDE DESIGN TEMPERATURES. The heating system shall be designed to maintain a temperature of not less than that shown in Table 1 and must be operated at not less than that temperature during occupied periods.

(a) Spot heating. Spot heating may be used to heat individual fixed work stations in large industrial buildings where it is impractical to provide heat to the entire space as described in (1) above, provided the inside design temperature at the fixed work station is at least 60° F.

(2) VENTILATION REQUIREMENTS. The ventilating system shall be designed, maintained and operated to accomplish the required ventilation indicated in Table 1.

(a) Outdoor air requirement waived. If a mechanical air supply system is provided and the requirement for outdoor air determined in accordance with Table 1 is less than 5% of the code required air movement of 6 air changes per hour, the requirement for outdoor air may be eliminated.

(b) Outdoor air requirement and percent of openings waived. The requirement for outdoor air or percent of openings may be omitted in large volume spaces containing 5,000 cubic feet per occupant.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; cr. (1) (a), (2) (a) and (b), Register, December, 1976, No. 292, eff. 1-1-77; am. (2) (b), Register, December, 1978, No. 278, eff. 1-1-79.

Ind 64.06 Mechanical ventilation systems. (1) DEFINITION. Mechanical ventilation is the process of supplying a mixture of tempered outside air and/or simultaneously removing contaminated air to the outside by power-driven fans or blowers.

(2) DESIGN. Mechanical ventilation systems shall be designed to supply a continuous source of outside air to all occupied areas during occupancy. Exhaust ventilation in equal volume shall be maintained simultaneously.

(3) AIR MOVEMENT. The air movement may be based on actual room height or up to 10 feet from the floor level of the room in question. The volume above 10 feet, in rooms which are more than 10 feet in height, need not be considered in the air change requirement if the required air change is designed to occur in the lower 10 feet of the occupied space.

(a) Six air changes per hour. The total air movement for all occupancies shall be at least 6 air changes per hour as specified in Table 1 of section Ind 64.06.

(b) Less than 6 air changes per hour. An air movement of less than 6 air changes per hour will be permitted where mechanical cooling (air conditioning) is provided and the heat gain requirement for the space has been satisfied.

(c) Air movement requirement waived. The air movement requirement for 6 air changes per hour may be omitted in the following applications:

1. Spot heating.

History: Register, December, 1978, No. 376 Building and heating, ventilating and air conditioning code.
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 261

Heating, Ventilating and Air Conditioning

2. Buildings containing large volume spaces of at least 5,000 cubic feet of air per occupant and where the requirement for outside air is waived in accordance with section Ind 64.05.

3. Buildings utilizing ventilation classification (b) with percentage of openings as specified in Table 1 of section Ind 64.05.

(4) AIR DISTRIBUTION. An adequate number of air supply, return and exhaust outlets or grilles shall be provided to insure a uniform distribution of air.

(5) RECIRCULATION AND TRANSFER OF AIR. (a) Recirculation. No air contaminated by any source other than human occupancy shall be recirculated, except within the same ventilation classification.

(b) Transfer. Air in a volume equal to the outside air required for a room may be transferred through a corridor and exhausted through a locker room, toilet room, kitchen, janitor closet or a similar area. Air shall not be transferred through elevator shafts and stairwells where doors are required at any floor level.

(6) DIVERSIFIED MECHANICAL SYSTEMS. If the mechanical ventilation system is able to deliver required quantities of outside air to each area when needed, the department will recognize diversity and the system may be designed on the actual occupancy.

Note #1: This rule permits the opening of outside air intakes in schools, offices and retail establishments to be delayed one hour after initial occupancy and permits the closing of outside air openings one hour prior to the termination of the occupancy.

Note #2: See Ch. Ind 1000-2000, Wis. Safety & Health Code, for requirements for dust, fumes, vapors and gases.

History: Cr. Register, December, 1976, eff. 1-1-77; rem. (3) to be (6), rem. 64.15 (2) to be (3), 64.15 (3) to be (4), cr. (3) (c) and (b), Register, December, 1976, No. 262, eff. 1-1-77.

Ind 64.07 Natural ventilation system. (1) OUTDOOR OPENINGS. Outdoor openings used for natural ventilation shall be within 100 feet, or 5 times the least dimensional width of the occupied area, whichever is the least.

(a) Outdoor openings located below grade. Outdoor openings below grade will not be accepted unless there is a clear space outside of the opening having a width not less than 1½ times the distance below grade at the bottom of the opening.

Note: Width of clear space is the horizontal distance measured at right angles to the plane of the opening.

(b) Outdoor openings located from a property line. Outdoor openings shall be at least 5 feet from a property line and/or lot line or an adjacent building on the same property. This distance restriction does not apply to property lines along streets.

Note: For further restrictions, see Table 61.03-9 and section Ind 64.19.

History: Cr. Register, December, 1976, No. 260, eff. 1-1-76.

</table>

Notes:
- CFM = Cubic Feet per Minute
- WHR = No minimum requirements.
- TFR = Teller facilities (water closets and urinals).
- See section 16.44, 64.01 and 64.06 for mechanical, natural and exhaust ventilation systems; and sections 16.41 through 64.18 for ventilation and air standards.

Ventilation Classification:
- (a) Requires a supply of outside air and an equal amount of exhaust ventilation at the rate of 5 CFM per person and a minimum air movement of 6 air changes per hour.
- (b) Requires a supply of outside air and an equal amount of exhaust ventilation at the rate of 5 CFM per person and a minimum air movement of 6 air changes per hour or a percentage of openings.
- (c) Requires a supply of outside air and exhaust determined on the basis of CFM per square foot of floor area.
- (d) Requires exhaust ventilation determined on the basis of CFM per square foot of floor area. The area shall be provided with negative pressure relative to adjacent areas. A supply of outside air is required only when the total building exhaust exceeds the air change per hour, unless otherwise noted. In multiple-use occupancy, the area of each occupancy shall be considered separately.
- (e) Requires a supply of outside air and exhaust determined on the basis of CFM per square foot of floor area. The area shall be provided with a negative pressure relationship with respect to the adjacent areas.

Percent of Openings: See section 64.07 for special considerations on natural ventilation.

*Ventilation requirements: See sections 64.06, 64.07 and 64.08 for mechanical, natural and exhaust ventilation systems; and sections 64.11 through 64.18 for ventilation and air standards.

*Ventilation classification:
(a) Requires a supply of outside air and an equal amount of exhaust ventilation be provided at a rate of 5 CPM per person and a minimum air renewal of 6 air changes per hour.
(b) Requires a supply of outside air and an equal amount of exhaust ventilation at the rate of 5 CPM per person and a minimum air renewal of 6 air changes per hour, or a percentage of building exhaust determined on the basis of CPM per square foot of floor area.
(c) Requires a supply of outside air and exhaust determined on the basis of CPM per square foot of floor area.
(d) Requires exhaust ventilation determined on the basis of CPM per square foot of floor area. The area shall be provided with negative pressure relative to adjacent areas. A supply of outside air is required when the total building exhaust exceeds once air change per hour, unless otherwise exempted. In multiple-use occupancies, the area of each occupancy shall be considered separately.
(e) Requires a supply of outside air and exhaust determined on the basis of CPM per square foot of floor area. The area shall be provided with a negative pressure relationship with respect to adjacent areas.
(f) Requires a percentage of openings.
(g) Does not require a separate supply of outside air provided the outside air introduced in the entire area adjacent to the wall is circulated through and exhausted from the shopping mall corridor area.

*Dependent upon number of persons. In determining the number of occupants in a given space, the department will accept the net square feet per person as listed in Table 1 for the actual number of persons, provided the expected occupancy is indicated on the plans and is reasonable. Where no value is indicated for net square feet per person, use the actual number of occupants to determine the required amount of outside air.

*Ventilation requirements. See section 64.06 for special considerations on natural ventilation.
Heating, Ventilating and Air Conditioning

Ind 64.08 Exhaust ventilation system. (1) Definitions. (a) Exhaust ventilation system. Any combination of building construction, machinery, devices or equipment, designed and operated to remove harmful gases, dusts, fumes or vitiated air from the breathing zone of employees and frequenters.

(b) Gravity exhaust ventilation. A process of removing air by natural means, the effectiveness depending on atmospheric condition, such as difference in relative density, difference in temperature or wind motion.

(2) Design. Exhaust ventilating systems shall be designed to reasonably prevent contaminated air from reentering the building.

(3) Operation. The required building exhaust ventilating systems shall operate continuously during periods of occupancy.

(4) Exhaust vents. All exhaust vents shall be ducted to the exterior of the building.

Note: Heat reclaim equipment for exhaust systems having more than 10,000 CFM capacity should be considered for energy savings.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; cr. (4), Register, December, 1976, No. 252, eff. 1-1-77.

Ind 64.09 Combustion air intakes. Any room in which burners are located shall be supplied with combustion air for proper burner operation.

(1) Combustion air for burners. All burners shall be provided with combustion air by one of the following methods:

(a) Combustion air by gravitational means. Where combustion air is introduced by gravitational means, the minimum free area for combustion air intakes shall be calculated in square inches as indicated in Table 64.09. The values are based on the fuel input of the heating equipment.

</tbody>
</table>

(b) Combustion air for power burners. The minimum free area for combustion air intakes for power burners shall be at least .5 square feet per 1,000,000 Btu per hour fuel input with a minimum free area of 10 square inches.

(c) Combustion air by mechanical means. Combustion air furnished by mechanical systems, such as makeup air units, may be used when complete design data is submitted and approved by the department.

(d) Combustion air by infiltration. If the heating equipment is not required to be located in a fire-resistant room, combustion air may be supplied by infiltration.
provided by means of infiltration where the total area of the outdoor openings (doors and windows) is greater than 3% of the floor area in which the burner is located.

Note: See section Ind 64.22 for special conditions.

(2) DAMPERS. (a) Manually operated dampers are prohibited. (b) Motorized dampers are acceptable when interlocked with the burner. Dampers shall be open when the burner is in operation. A safety interlock switch shall be installed to insure that the damper is in an open position before the burner is permitted to operate.

(3) DUCTWORK. Where ductwork is required to bring combustion air into the building, the duct shall have the same cross-sectional area as the free area of the combustion air openings.

(4) SEGREGATION OF COMBUSTION AIR. The combustion air path shall be completely segregated from the outside air ventilation ductwork.

(5) BURNERS IN NEGATIVE PRESSURE LOCATIONS. An atmospheric burner shall not be installed where the space in which the burner is located is under negative pressure due to an exhaust system.

(6) MOUNTING HEIGHT. Mounting height of the combustion air intakes shall be as required in section Ind 64.19 (1) (c).

(7) AIR-HANDLING EQUIPMENT LOCATED IN A BOILER OR FURNACE ROOM. If the fuel input to the burner exceeds 400,000 Btu per hour, the air-handling equipment and the burner shall be interlocked to shut off the burner and the blower when any service door to the air-handling equipment is opened, unless an air barrier separation is provided between the burner and the air handling equipment.

Ind 64.11 Refrigerants. The rules covering the use of refrigerants for air conditioning systems shall conform with Wis. Adm. Code chapter Ind 45, Mechanical Refrigeration.

Ind 64.12 Definitions. (1) “Air conditioning.” The process of treating air to control temperature, humidity, cleanliness and distribution to meet the requirements of the conditioned space.
"Outside air." Air that is taken from outside the building and is free from contamination of any kind in proportions detrimental to the health or comfort of the persons exposed to it.

(3) "Recirculated air." The transfer of air from a space through the air-handling equipment and back to the space.

(4) "Tempered air." Air transferred from a heated or cooled area of a building.

(5) "Tempered outside air." Outside air heated or cooled before distribution.

(6) "Ventilation." The process of supplying or removing air by natural or mechanical means, to or from any space.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.13 Tempered air requirements. (1) SUPPLY AIR. The design conditions of the supply air temperature to the occupied space shall be between 50° F and 140° F.

(2) TEMPERED AIR SUPPLY DEPENDING ON NEGATIVE PRESSURE. A supply of tempered air, depending on a negative pressure within the space, will be permitted in foundries, steel fabricating shops and similar areas.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.14 Tempered outside air requirements. (1) MAKEUP AIR. A supply of tempered outside air shall be provided when the total volume of building exhaust from an area exceeds one air change per hour.

Note: See Ch. Ind 1000-2000, Wis. Safety & Health Code, for further requirements for makeup air for industrial exhaust systems.

(2) PROCESS HEAT. Process heat may be used to temper required outside air.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.15 Air movement and distribution. (1) AIR DELIVERY CAPACITY. The air delivery capacity of all equipment supplying air for heating, ventilating and air conditioning purposes shall be based on standard air ratings.

Note: Standard air is substantially equivalent to dry air at 70° F and 29.92 inches (Hg) barometric pressure.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; rel. (2) and (3) to be 64.06 (b) and (4), c. 44, Register, December, 1976, No. 282, eff. 1-1-77.

Ind 64.16 Air-cleansing devices. (1) AIR-CLEANSING ACCESS. Air-cleansing devices shall be designed and installed to permit access to the equipment for maintenance and to insure proper operation of the heating and ventilating system.

(2) AIR-CLEANSING FILTERS. Approved air-cleansing filters shall be designed and installed in a manner to filter the outside air and recirculated air used with mechanical heating and ventilating systems except as follows:

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Building and heating, ventilating and air conditioning code
(a) Filters are not required in garages, factories, foundries and similar occupancies.

(b) Filters are not required for use with unit heaters designed for heating and recirculation.

(c) Where jet systems or blend-air systems are approved, air filters are not required in the ducts that are installed for the recirculation of air within the same occupied space.

Note: The department recognizes as approved, filters listed in the Building Materials List published by Underwriters' Laboratories, Inc., and test data of any other recognized testing agency for the purpose for which it is used.

(3) AIR-CLEANSING MATERIALS. Contaminated water shall not be used or recirculated through sprays affecting air used for ventilating purposes.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-77

Ind 64.17 Automatic controls. Automatic controls shall be provided to maintain design temperature, control ventilation to provide a continuous air movement of not less than the minimum required by this code, and to provide a continuous supply of outside air and exhaust as determined by the provisions of section Ind 64.05, Table 1, during periods of occupancy.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76

Ind 64.18 Contamination of air. (1) CONTAMINATION. Air contaminated from odors, fumes, noxious gases, smoke, steam, dust, spray, or other contamination shall be diluted with uncontaminated air or exhausted to prevent the contaminated air from spreading to other parts of the building occupied by people.

Note: Cross reference: For requirements pertaining to all places of employment or occupancy where smoke, gas, dust, fumes, steam, vapor, industrial poisons, or other noxious materials are used, stored, handled, or are present in the air in sufficient quantities to obstruct the vision, or to be injurious to the health, safety or welfare of the employee or occupant, see Wis. Adm. Code Ch. Ind 1000-2000—Wisconsin Safety and Health Code.

(a) Chlorinated hydrocarbons. Areas where chlorinated hydrocarbons are introduced shall be arranged to satisfy the following conditions:

Note: Some of the chlorinated hydrocarbons commonly used are trichloroethylene, perchloroethylene, carbon tetrachloride, methyl ethyl chloroform, Freon F-11, Freon F-113, Freon F-21 and Freon F-114. For example, these materials are used in dry cleaning establishments, in degreasing operations, and where pressure can propellants are used. Pressure cans are used for such products as aerosols, bronzers, paint removers, stencil ink, lubricants, pesticides, hair sprays, shaving lotions, shampoos and colognes.

1. The area shall have an exhaust system capable of maintaining a negative pressure within the enclosed area.

2. The volume and distribution of air movement within the area shall be such that the average threshold limit values of specific airborne contaminants are not exceeded. See Wis. Adm. Code chapters Ind 1000-2000—Wisconsin Safety and Health Code.

3. No direct-fired heating unit, with or without a heat exchanger, shall be located within this area, nor shall it recirculate air from this area.

History: Cr. Register, December, 1976, No. 276

Building and heating, ventilating and air conditioning code
4. The surface temperatures of any type of heating equipment used in these areas shall be below the temperature at which toxic materials may be released.

(b) Transfer of contaminated air. Air shall not be transferred from an area of greater contamination.

Note: The department will accept air transfere to:
- corridor to toilet room;
- corridor to cloak room or janitor closet;
- dining room to kitchen;
- locker room to toilet room;
- gymnasium to locker room;
- showroom to garage; and
- corridor to school vocational shops.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.19 Location of outside ventilating air intakes or exhausts for mechanical ventilation systems. (1) Location and distance.

(a) Location to prevent contamination. Outside air intake openings shall be located so as to minimize contamination of outdoor air, but in no case shall the distance be less than 10 feet (measured in any direction) from outlets emitting products of combustion, exhaust vents and plumbing vents.

Note: This requirement also applies to rooftop heating and ventilating equipment.

(b) Distance to adjacent properties. Air intakes and exhausts shall be at least 10 feet from a property line and/or lot line or an adjacent building on the same property. This distance restriction does not apply to property lines along streets or alleys.

(c) Mounting height. The lowest side of outside air intake openings shall be located at least 12 inches above outside grade, above adjoining roof surfaces, or above the bottom of an areaway.

Note: The department will accept outside air intakes in areaways provided the minimum horizontal cross section of the areaway is equal to the free area of the opening, a grating is provided over the areaway with a free area equal to the required air intake, and the grating is designed for a minimum of 100 PSF live load.

(2) Screens. All outside air intake openings shall be provided with a device to prevent intake of foreign material of 3/8-inch size or larger.

(3) Weather Protection. All outside air intake openings shall be protected against water and water with a weatherproof hood or louvers.

(4) Accessibility and Cleanliness. All outside air intake shall be easily accessible for cleaning and shall be kept clean and sanitary.

(5) Dampers. (a) Intake. All required outside air intakes shall be equipped with a damper with automatic controls which will close the damper and prevent the intake of outside air into the building when the ventilating unit is not in operation.

(b) Exhaust. All exhaust openings shall be provided with automatic or self-activating back draft dampers to prevent the intake of outside air into the building when the exhaust units are not in operation.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76. Am. (3) (a), Register, December, 1975, No. 252, eff. 1-1-77.
PART IV-HEATING EQUIPMENT REQUIREMENTS

Ind 64.20 Equipment ratings and safety controls. (1) * Test and installation standards. Oil and gas-fired heating equipment, electric heating equipment, and accessory equipment or devices shall be tested and installed in accordance with standards recognized by the department.

Note: For a list of standards acceptable to the department, refer to Appendix A.

(2) Safety controls. (a) General. The complete safety control package for the heating and ventilating equipment shall comply with standards accepted by the department.

(b) Limits and controls. Oil and gas-fired heating equipment and electric heating equipment shall be equipped with primary (flame safeguard) safety controls, safety limit switches, and burners or electric elements that comply with standards accepted by the department.

Note: The department recognizes UL 295-0il Burners, and UL 795-Commercial-Industrial Gas Heating Equipment, as acceptable standards that satisfy the requirements of Ind 64.20 (1) and (2).

(3) Listed equipment. Complete factory assembled heating units shall be labeled by listing agencies approved by the department.

Note: The department accepts heating equipment listed by American Gas Association and Underwriters' Laboratories.

(4) Unlisted equipment. If the heating equipment is unlisted, the following provisions shall be taken:

(a) Manufacturer's statement. A statement from the equipment manufacturer shall be provided indicating the national standard with which the equipment complies.

(b) Tests. A test by a Wisconsin registered engineer shall be conducted on the output and safety controls, in accordance with the national standard used by the manufacturer. A statement regarding the test of the rating and safety controls shall be furnished for each installation unless an approval for the equipment is obtained from the department in accordance with (5) below.

(5) Equipment approval. Equipment approval may be obtained from the department upon submission of a technical report, based on the test required in (4) (b) above, together with the fee as specified in Wis. Adm. Code chapter Ind 69, Fee Schedule, for equipment approval.

Note: The purpose of the technical report is to show that the equipment is in complete compliance with the national standard by which the equipment is designed, constructed and tested.

History: Cr. Register, December, 1975, No. 249, eff. 1-1-76; r. and recr. Register, December, 1976, No. 262, eff. 1-1-77; am. (5), Register, December, 1977, No. 264, eff. 1-1-78.

*See Appendix A for further explanatory material.

**Notes:**
- Gas or oil furnaces shall be mechanically exhausted by a system of ducts leading to the outside of the building.
- Normal clearances are as follows:
  - Between combustible materials and the enclosure of gas or oil furnaces:
    - Not less than 2 feet.
  - Between combustible materials and the enclosure of gas or oil burning in enclosures:
    - Not less than 3 feet.
  - Between combustible materials and the enclosure of gas or oil burning in the range of 0.5 to 1.25 times the height of the building:
    - Not less than 4 feet.
-är - Equipment shall be installed in accordance with the latest edition of the National Electrical Code.
Ind 64.21 Location of equipment. The various types of heating equipment and the corresponding types of occupancies in which the equipment may be located are shown in Table 64.21. The footnotes below the table designate special requirements for the listed equipment.

Note: The department will accept net ratings as listed by Mechanical Contractors Association of America, Inc., Institute of Boiler and Radiator Manufacturers, and equipment tested according to commercial standard 140-47.

Historv Cr. Register, December, 1976, No. 240, eff. 1-1-77; r. and recr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 64.22 Special requirements. (1) BOILERS AND PRESSURE VESSELS.

(a) Construction standards. Boilers and pressure vessels shall be constructed and installed in compliance with the standards of the American Society of Mechanical Engineers, as adopted under the Wis. Adm. Code chapters Ind 41-42—Boiler and Pressure Vessel Code.

(b) Installation notification. The installing contractor shall notify the department of boiler installation, in accordance with the requirements of section Ind 41.05, before the boiler or pressure vessel is put into operation.

(2) FURNACES. Forced-air heating systems shall be designed to prevent a negative pressure on the heat exchanger.

(3) SUSPENDED EQUIPMENT. Suspended gas or oil-fired heating and ventilating equipment shall be visible to persons within the room where it is suspended and in no way hidden and shall comply with the following:

(a) If the entering air to the heat exchanger of all gas-fired equipment is 90°F or lower, the heat exchanger and burners shall be constructed of corrosion-resistive materials.

(4) GAS OR OIL-FIRED RADIANT HEATERS. Gas or oil-fired radiant heaters are subject to the following provisions:

(a) The heaters shall be equipped with an automatic pilot of the complete shutoff type or with a 100% shutoff electric ignition.

(b) If unvented radiant heaters are used, gravity or mechanical means shall be provided to exhaust at least 4 CFP per 1000 Btu per hour input of installed heaters. Provisions shall be made for an equal supply of outside air.

(c) Exhaust openings for removing products of combustion shall be provided above the level of the radiant heaters.

(d) Oil-fired radiant heaters shall be equipped with mechanical pressure-atomizing burners.

(5) SPACE HEATERS. Space heaters shall comply with the following provisions:

(a) The burner of the appliance shall be enclosed with a metal housing so constructed that there will be no open flame and the burner housing shall be effectively guarded against personal contact. The arrangement shall be such that the shield will prevent any combustible material in the vicinity of the appliance from coming in contact with the flame or
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 276 Heating, Ventilating and Air Conditioning

with the housing that encloses the burner. Oil-fired space heaters shall be equipped with a mechanical pressure atomizing burner.

(b) Space heaters shall not be equipped with duct extensions beyond the vertical and horizontal limits of the metal enclosure.

(6) Equipment in Hazardous Locations. The types of heating and ventilating equipment that may be installed in hazardous locations (as defined in Article 500 of the National Electrical Code) are as follows:

(a) Listed low-pressure steam or hot water unit heaters and makeup air units;

(b) Listed electric units.

(7) Floor-Standing Vented or Unvented Equipment. Floor-standing, vented or unvented unit heaters, furnaces and boilers in metal fabricating plants, foundries and machine shops are exempt from the requirements of section Ind 54.14.

Note: The department will accept equipment listed by Underwriters' Laboratories, Inc.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; r. and rereg. Register, December, 1976, No. 252, eff. 1-1-77; r. (4) (d) and r. rereg. (4) (e) to be (d), Register, December, 1977, No. 294, eff. 1-1-78; r. (b) and cr. (7), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.23 Piping. (1) Pipe Sizes and Arrangement. All supply and return piping carrying steam, hot water or other fluids, air-line piping and auxiliary equipment shall be of appropriate sizes, elevations and arrangements to accomplish the calculated services in practical operation, without undue noise, stress or other detriment.

(2) Expansion and Contraction. The piping for the heating system shall be equipped with anchors, expansion swings or joints, supports and similar devices to relieve stress and strains caused by temperature change of the pipe material.

(3) Pipe Insulation. All supply and return piping carrying steam, hot water or other fluids shall be covered with insulating material where the pipes pass through occupied areas and the surface temperature exceeds 180°F, unless guarded.

(4) Pipe Protection. No pipe carrying hot water, steam, or other fluid at a surface temperature exceeding 200°F shall be placed within one inch of any woodwork, pass through a combustible floor, ceiling or partition, unless the pipe is protected by a metal tube one inch larger in diameter than the pipe or with approved pipe covering.

(5) Gas or Oil Installations. (a) Piping installations. All gas piping and oil piping shall comply with the standards accepted by the department.

Note: The department will accept gas piping installations which conform to NFPA No. 54 (ANSI Z223.1), National Fuel Gas Code; and oil piping installations which conform to NFPA No. 31, Oil-Burning Equipment.

(b) Oil tank installations. All oil-burning equipment shall be supplied with oil from a supply tank having a capacity of not less than 250 gallons. The fuel oil tank shall be equipped with a fill pipe, vent pipe and
oil gauge. The vent pipe and fill pipe shall terminate outside of the building.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77; am. (1), (3) and (4), Register, December, 1976, No. 276, eff. 1-1-77.

PART V—AIR DELIVERY SYSTEMS

Ind 64.31 Duct design. All ducts shall be designed to promote the unrestricted flow of air.

Note: The department will accept air duct velocities designed in accordance with the standards of the ASHRAE Handbook of Fundamentals, published by the American Society of Heating, Refrigerating and Air Conditioning Engineers.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-77.

Ind 64.32 Duct use. No duct designed for the transmission of air shall be used for any other purpose.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-77.

Ind 64.33 Underground duct construction and installation. (1) MATERIALS. (a) Tile ducts. All underground duct systems using cement tile, glazed clay tile and other tile having a composition of cement and mineral shall be waterproof and shall have sufficient strength to prevent failure of duct at the time of installation and while in service. All fittings shall be designed with bell and spigot or slip-joint connections. All joints shall be waterproof.

(b) Plastic and metal ducts. Metal, plastic-coated metal ducts, and other approved materials may be used for underground systems if enclosed in not less than 2 inches of concrete. The ducts shall be waterproof, noncombustible, smooth and of sufficient strength to prevent collapse.

Note: The department will accept polyvinyl ducts installed underground without concrete.

(2) Duct insulation. Supply air ducts installed parallel and adjacent to an outside wall shall be insulated with a moistureproof material (thermal conductance factor of .19 BTU per hour per square foot per degree Fahrenheit) placed between the duct and outside wall. The insulation shall extend from the underside of the floor to 2 feet below the finished grade.

(3) Duct drainage. Underground ducts shall be provided with drainage to a lower room of the building or to a sump. No duct shall be connected to a sewer.

(4) Duct inlets and outlets. A water-tight connection shall be provided where the inlet and outlet risers are connected to underground ducts.

(5) Piping. Nonhazardous piping may be installed in underground ducts if it does not restrict the air flow.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-77.

Building and heating, ventilating and air conditioning code
with the housing that encloses the burner. Oil-fired space heaters shall be equipped with a mechanical pressure atomizing burner.

(b) Space heaters shall not be equipped with duct extensions beyond the vertical and horizontal limits of the metal enclosure.

(6) Equipment in Hazardous Locations. The types of heating and ventilating equipment that may be installed in hazardous locations (as defined in Article 500 of the National Electrical Code) are as follows:

(a) Listed low-pressure steam or hot water unit heaters and makeup air units;

(b) Listed electric units.

(7) Floor-Standing Vented or Unvented Equipment. Floor-standing, vented or unvented unit heaters, furnaces and boilers in metal fabricating plants, foundries and machine shops are exempt from the requirements of section Ind 54.14.

Note: The department will accept equipment listed by Underwriters’ Laboratories, Inc.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; r. and recr. Register, December, 1976, No. 252, eff. 1-1-77; r. (4) (d) and renum. (4) (e) to be (d), Register, December, 1977, No. 264, eff. 1-1-78; am. (1) (b) and cr. (7), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.23 Piping. (1) Pipe Sizes and Arrangement. All supply and return piping carrying steam, hot water or other fluids, air-line piping and auxiliary equipment shall be of appropriate sizes, elevations and arrangements to accomplish the calculated services in practical operation, without undue noise, stress or other detriment.

(2) Expansion and Contraction. The piping for the heating system shall be equipped with anchors, expansion swings or joints, supports and similar devices to relieve stress and strains caused by temperature change of the pipe material.

(3) Pipe Insulation. All supply and return piping carrying steam, hot water or other fluids shall be covered with insulating material where the pipes pass through occupied areas and the surface temperature exceeds 180° F, unless guarded.

(4) Pipe Protection. No pipe carrying hot water, steam, or other fluid at a surface temperature exceeding 250° F shall be placed within one inch of any woodwork, pass through a combustible floor, ceiling or partition, unless the pipe is protected by a metal tube one inch larger in diameter than the pipe or with approved pipe covering.

(5) Gas or Oil Installations. (a) Piping installations. All gas piping and oil piping shall comply with the standards accepted by the department.

Note: The department will accept gas piping installations which conform to NFPA No. 54 (ANSI Z223.1), National Fuel Gas Code; and oil piping installations which conform to NFPA No. 31, Oil-Burning Equipment.

(b) Oil tank installations. All oil-burning equipment shall be supplied with oil from a supply tank having a capacity of not less than 250 gallons. The fuel oil tank shall be equipped with a fill pipe, vent pipe and
oil gauge. The vent pipe and fill pipe shall terminate outside of the building. 

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76; r. and recr. Register, December, 1976, No. 252, eff. 1-1-77; am. (1), (3) and (4), Register, December, 1978, No. 276, eff. 1-1-79.

PART V—AIR DELIVERY SYSTEMS

Ind 64.31 Duct design. All ducts shall be designed to promote the unrestricted flow of air.

Note: The department will accept air duct velocities designed in accordance with the standards of the ASHRAE Handbook of Fundamentals, published by the American Society of Heating, Refrigerating and Air Conditioning Engineers.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76.

Ind 64.32 Duct use. No duct designed for the transmission of air shall be used for any other purpose.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76.

Ind 64.33 Underground duct construction and installation. (1) MATERIALS. (a) Tile ducts. All underground duct systems using cement tile, glazed clay tile and other tile having a composition of cement and mineral shall be waterproof and shall have sufficient strength to prevent failure of the duct at the time of installation and while in service. All fittings shall be designed with bell and spigot or slip-joint connections. All joints shall be waterproof.

(b) Plastic and metal ducts. Metal, plastic-coated metal ducts, and other approved materials may be used for underground systems if encased in not less than 2 inches of concrete. The ducts shall be waterproof, noncombustible, smooth and of sufficient strength to prevent collapse.

Note: The department will accept polyvinyl ducts installed underground without concrete.

(2) DUCT INSULATION. Supply air ducts installed parallel and adjacent to an outside wall shall be insulated with a moistureproof material (thermal conductance factor of .19 BTU per hour per square foot per degree Fahrenheit) placed between the duct and outside wall. The insulation shall extend from the underside of the floor to 2 feet below the finished grade.

(3) DUCT DRAINAGE. Underground ducts shall be provided with drain- age to a lower room of the building or to a sump. No duct shall be connected to a sewer.

(4) DUCT INLETS AND OUTLETS. A water-tight connection shall be provided where the inlet and outlet risers are connected to underground ducts.

(5) PIPING. Nonhazardous piping may be installed in underground ducts if it does not restrict the air flow.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.
ventilation classifications designated in Table 1. Where barometric relief vents are installed on the roof, the discharge openings shall be not less than 2 feet above the roof.

(2) BAROMETRIC RELIEF VENTS PROHIBITED. The use of barometric relief vents is prohibited for type (c), (d) and (e) ventilation classifications designated in Table 1.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. Register, December, 1976, No. 263, eff. 1-1-77.

Ind 64.41 Suspended ceiling plenum. (1) GENERAL. Plenums above ceilings used for the supply, return and transfer of air shall be of noncombustible construction as defined in section Ind 51.01 (96) (a).

(2) DUCTWORK WITHIN THE PLENUM. Ducts within the plenums shall be constructed of metal in accordance with Ind 64.34 (1) or approved nonmetallic materials in accordance with Ind 64.34 (3).

(3) DUCT CONNECTORS. Duct connectors shall comply with the requirements of section Ind 64.35.

Note: Flame retardant fabric or metal or mineral listed in the Building Materials List, published by Underwriters' Laboratories, Inc., are acceptable.

(4) DUCT AND PIPE INSULATION. Duct and pipe insulation, including coverings, linings, tapes and core materials, shall have a flame spread rating of not over 25 without evidence of continued progressive combustion, and a smoke developed rating no higher than 50. If coverings and linings are to be applied with adhesives, they shall be tested as applied with such adhesives, or the adhesives used shall have a flame spread rating not over 25 and a smoke developed rating no higher than 50 when in the final dry state.

(5) HAZARDOUS PIPING AND CABLES. The installation of hazardous piping and cables within the plenum is prohibited.

(6) OPENINGS. Openings into the plenum that would affect the fire-resistive rating of the roof and ceiling are prohibited.

Note: This section permits the use of steel, painted steel bar joists and metal decking, concrete, plaster, and other inorganic materials and prohibits the use of certain combustible materials including plastic wire sheathing, plastic thermal insulation, plastic pipe, intumescent paint and organic materials which will not pass ASTM test procedure E-136 [Ind 51.25 (60)], except plastic control tubing that meets the criteria of ASTM test procedure D-635.

(7) SMOKE DETECTION. Suspended ceiling plenums which do not satisfy the requirements of (2) through (4) of this section shall be provided with an approved smoke detection system acceptable to the department.

Note: The department will accept smoke detection systems designed, installed and maintained in accordance with National Fire Protection Association standard No. 72-R.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. Register, December, 1976, No. 263, eff. 1-1-77; r. and recr. Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.42 Fire dampers and fire curtain doors. (1) REQUIRED FIRE DAMPERS AND FIRE CURTAIN DOORS. All heating and ventilating ducts which terminate at or pierce code-required, hourly rated wall, floor or floor-ceiling assemblies (Table 51.03-A) and rated enclosures shall be protected as follows:

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
(a) Two-hour rated assemblies and enclosures shall be protected with 1½-hour rated fire dampers.

(b) Three-hour and 4-hour rated assemblies and enclosures shall be protected with 3-hour "A" label fire curtain doors.

(2) Exceptions. Exceptions to Ind 64.42 (1) are:

(a) Any assembly, such as a floor-ceiling assembly, that has been certified for use without fire dampers and approved by a nationally recognized testing laboratory.

(b) Metal ducts which do not exceed a maximum area of 20 square inches.

(c) Combustion air ducts which extend from the exterior of the building and terminate at 2-hour rated enclosures and which do not pierce any other fire-rated assembly in other areas of the building.

(d) Interior bearing walls and partitions if unrated openings are permitted by other sections of this code.

(3) Servicing Fire Dampers. Access panels shall be provided next to fire dampers and fire curtain doors to permit viewing and servicing.

Note #1: The department will accept fire dampers and fire curtain doors listed by Underwriters' Laboratories, Inc. or an approved nationally recognized testing laboratory. The dampers must be installed in the vertical or horizontal position that the dampers were designed and tested for. The department will also accept fire damper and fire curtain door installations recommended in publications of the Sheet Metal, Air Conditioning Contractors National Association, Inc., and the National Fire Protection Association bulletins No. 80 and 90A.

Note #2: Fire dampers classified by Underwriters' Laboratories as 1½-hour rated assemblies are of single blade, multi-blade and curtain types. Fire curtain doors classified by Underwriters' Laboratories as time rated (3 hour) and labeled (A) are of the curtain-blade type.

Note #3: See section Ind 64.66 for fire damper requirements in kitchen exhaust systems.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; r. (1) (a), rem. (1) (b) and (c) to be (1) (a) and (b), Register, December, 1976, No. 252, eff. 1-1-77; em. (2) (c), Register, December, 1977, No. 264, eff. 1-1-78; cr. (2) (d), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.43 Dampers and damper controls. (1) Volume dampers and deflectors. Volume dampers, splitters and deflectors shall be provided in all ducts to permit accurate balancing of the system. The dampers, splitters and deflectors shall be adjusted to satisfy the heating and ventilating requirements of the conditioned space and locked in place.

(2) Air grilles. All air supply outlets and returns shall be equipped with grilles or devices which will provide a uniform distribution of air.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.44 Fans and blowers. (1) Type and capacity. Fans and blowers shall be of a type and size that will satisfy the design conditions of the heating and ventilating system. Fans and blowers shall be rated in accordance with an approved test procedure.

Note: The department accepts certified ratings listed by the Air Moving and Conditioning Association, Inc.

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
DEPT. OF INDUSTRY, LABOR & HUMAN RELATIONS 281
Heating, Ventilating and Air Conditioning

(2) QUIET OPERATION. The sound generated by various fans and blowers shall not be objectionable.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

PART VI—CHIMNEYS, GAS VENTS, MECHANICAL DRAFT AND VENTING DEVICES

Ind 64.45 Chimneys, smoke stacks, gas vents, mechanical draft and venting devices. (1) GENERAL REQUIREMENTS. Heating equipment using solid, liquid or gas fuels shall be vented to the outside. A natural draft chimney or other venting device shall have the height and area to remove the products of combustion.

(2) NONCOMBUSTIBLE SUPPORTS. All chimneys or gas vents shall be supported from noncombustible construction unless otherwise approved.

(3) TERMINATION. (a) Gravity type. All chimneys or vents depending on a gravity principle for the removal of the products of combustion shall extend at least 3 feet above the highest point where the chimneys and vents pass through the roof of the building, and at least 2 feet higher than any ridge, peak or wall within 10 feet of the chimney.

(b) Mechanical type. The height and cross-sectional area may be reduced for chimneys employing a mechanical draft system of either forced or induced draft when approved by the department.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.46 Masonry chimneys. The design and construction of the chimney shall conform to the provisions of this section.

(1) MATERIALS. The walls shall be built of brick or other approved fire-resistive material. No chimney shall rest upon a flooring of wood nor shall any wood be built into or in contact with any chimney. Combustible headers, beams, joists and studs shall be located at least 2 inches from the outside face of a chimney. The foundation shall be designed and built in conformity with the requirements for foundations for buildings. In no case shall a chimney be corbeled out more than 8 inches from the wall and in every case the corbeling shall consist of at least 6 courses of brick.

(2) FLUE SIZE. Every masonry chimney shall have walls at least 8 inches in solid thickness, except that in a chimney with a flue not larger than 260 square inches where a fire clay or other suitable refractory clay flue lining is used for the full height of the chimney the walls shall not be less than 4 inches in solid thickness. No smoke flue shall have a cross-sectional area less than 64 square inches. Flue linings 7 inches by 7 inches inside, or 8 inches in diameter inside, may be used.

(3) FLUE LININGS. All flue linings shall be capable of withstanding reasonably high temperatures and flue gases and shall have a softening point not lower than 1800° F. Flue linings shall be not less than 3/8 inch in Register, December, 1978, No. 276 Building and heating, ventilating and air conditioning code
thickness and shall be built in as outer walls of the chimney are constructed. Flue linings shall start from a point not less than 8 inches below the bottom of the smoke pipe intake and shall be continuous to a point not less than 4 inches above the enclosing walls.

(4) SMOKE PIPE CONNECTION. If there is more than one smoke pipe connected to a flue, the connections shall be at different levels. Two or more heating units, or appliances, may be connected to a common smoke pipe, or breeching, if joined by Y fittings as close as practicable to the flue. In all such cases, the size of the breeching and the flue shall be sufficient to accommodate the total volume of flue gases.

(5) CLEAN-OUT OPENING. Every chimney shall be provided with a clean-out opening at the base. Such openings shall be equipped with metal doors and frames arranged to remain closed when not in use.

(6) WIND PRESSURE. Every chimney shall be designed to withstand wind pressures in accordance with the requirements of section Ind 53.12.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.47 Metal smokestacks. (1) SMOKESTACKS IN EXCESS OF 30 FEET. The thickness of the metal walls shall be at least 3/16 inch for smokestack heights up to 40 feet and 1/4 inch for greater heights. Stacks used for manufacturing, high-pressure boilers, furnaces or other similar heating or manufacturing appliances shall be lined with firebrick, or equivalent, for a distance of not less than 25 feet from the place where the smoke pipe enters and shall be protected on the outside up to and through the roof of the building with 8 inches of masonry, or a metal shield which provides an 8-inch ventilated air space between such shield and the stack. All stacks shall be properly guyed if the height of the stack exceeds 15 times its least diameter.

(a) Exception. Public utility or industrial power plants are exempted from the protection requirements of this paragraph if they are of type No. 1 or No. 2 construction.

(2) SMOKESTACKS LESS THAN 30 FEET. Smokestacks less than 30 feet high may be constructed of not less than No. 10 U.S. gauge steel, with either welded or riveted joints, and may be mounted directly upon masonry chimneys or foundations or upon industrial heating or power boilers provided all of which are designed to support the stack load. A clearance of not less than 6 inches shall be maintained at all times around such smokestack and any combustible material within 12 inches of such smokestack shall be protected by 1/4 inch of asbestos covered by sheet metal.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. (1) (intro.), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.48 Factory-built chimneys and gas vents. (1) GENERAL. Factory-built chimneys and gas vents shall be of an approved type.

(2) TYPES OF APPROVED CHIMNEYS AND GAS VENTS. (a) Residential type and building heating appliance. An approved "residential type and building heating appliance" chimney or "building heating appliance building and air conditioning code
Heating, Ventilating and Air Conditioning

only chimney may be used with solid, liquid or gas-fired heating appliances where the flue gas temperature does not exceed 1000°F continuously, and does not exceed 1400°F for infrequent brief periods of forced firing.

(b) Type “B”. An approved type “B” gas vent may be used with gas-fired appliances where the flue gas temperature does not exceed 550°F at the outlet of the draft hood.

(c) Type “BW”. An approved type “BW” gas vent may be used with a vented recessed wall heater.

(d) Single wall vent pipe. An approved single wall vent pipe may be used with gas-fired, low-heat appliances (low-pressure boilers, furnaces and space heaters). The vent shall be not less than No. 20 standard gauge galvanized iron, No. 24 Brown and Sharpe gauge sheet copper, or other approved corrosion-resistant material. The installation shall conform to the requirements of section Ind 64.49.

(e) Type “L”. An approved type “L” vent may be used with oil-fired appliances listed as suitable by a recognized agency and with gas-fired appliances approved for type “B” vents.

Ind 64.49 Smoke pipes. (1) CONSTRUCTION AND INSTALLATION. The construction and installation of smoke pipes shall conform with the following requirements:

(a) Concealed spaces. No smoke pipe or breeching serving heating appliances shall pass through any outside window, door, or combustible outside wall, nor be concealed in any closet, attic or similar space.

(b) Smoke pipes which pass through combustible partitions. Every smoke pipe which passes through combustible partitions shall be encased with noncombustible material at least 4 inches thick, or with a double safety thimble made of 2 concentric rings of sheet metal with at least one inch open air space between and with the outer ring covered with at least 1/4-inch asbestos.

(c) Distance from materials. No part of any smoke pipe shall be placed nearer to any non-fire-resistant partition or wall than the diameter of the pipe, nor nearer to any non-fire-resistant ceiling than 1-1/2 times the diameter. The above distances may be reduced by one-half if the wall or ceiling is covered with not less than 1/4-inch asbestos board covered with sheet metal or with equivalent protection.

Ind 64.50 Gas vents. All gas ranges (except those for domestic use), water heaters and other gas-fired equipment shall be provided with vent pipes conforming to the requirements for gas vents as specified in section Ind 64.48 or for smoke pipes as specified in section Ind 64.49.
PART VII—EQUIPMENT LOCATION, PROTECTION, MAINTENANCE AND OPERATION

Ind 64.51 Guarding and fire protection. (1) Guarding of equipment. Heating and ventilating equipment in gymnasiums, playrooms and similarly occupied areas shall be fully recessed and protected, or located not less than 7 feet above the floor. Heating and ventilating equipment shall not block any part of the required aisles, passageways and corridors.

(a) Any surface temperatures that exceed 180°F;

(b) Surfaces that are likely to cause lacerations.

(3) Guarding of mechanical apparatus. All mechanical apparatus shall be guarded to comply with the requirements of Wis. Adm. Code Ch. Ind 1000-2000—Wis. Safety and Health Code.

(4) Fire protection. All installations under this chapter shall comply with the precautionary requirements of the department to reduce fire hazards.

Ind 64.52 Maintenance and operation. (1) Maintenance. All heating, ventilating, exhaust and air conditioning systems shall be maintained in good working order and shall be kept clean and sanitary.

(2) Operation. All heating, ventilating and exhaust systems shall be operated to satisfy the requirements of this chapter during periods the building is occupied.

(3) Instructions. The designer or installer shall provide the owner with written instructions for the operation and maintenance of the system and equipment.

Ind 64.53 Final test required. The designer, installer or recognized balancing agency shall be responsible for the testing and balancing of every heating, ventilating and air conditioning system.
PART VIII—OCCUPANCY REQUIREMENTS

Ind 64.54 Factories, office and mercantile buildings. (1) Scope. This classification shall include all places of employment, mercantile buildings, retail establishments where goods and commodities are bought and sold, and places where not more than 100 persons assemble for worship, recreation, entertainment or dining purposes.

Note: For mall corridors of enclosed mall shopping centers, see Ind 64.05, Table 1.

(2) Ventilation. The air movement, supply and distribution for all occupancies in this class shall conform to the requirements of section Ind 64.05, Table 1, except that natural ventilation or mechanical ventilation need not be provided in warehouses and cold storage buildings.

(3) Industrial exhaust system. (a) Contaminants. Industrial exhaust systems shall be installed and operated to remove harmful contaminants in conformance with Wis. Adm. Code Ch. Ind 1000-2000—Wisconsin Safety and Health Code.

(b) Makeup air. A volume of outside air shall be supplied to replace the air exhausted if the total volume of air exhausted exceeds one air change per hour. The quantity of makeup air shall equal at least 90% of the air exhausted.

(c) Connections. Connections between industrial exhaust systems that convey different materials, the combination of which may produce explosive, heat-generating, corrosive, toxic, or otherwise dangerous mixtures, shall be prohibited.

(4) Locker rooms. Locker rooms used in places of industrial employment shall be provided with outside air. See section Ind 64.05, Table 1.

Note: Exhaust air from locker rooms may be directed through the adjoining toilet room or shower room.

(5) First aid rest rooms in places of employment. Ventilation shall be provided for all areas of this class to conform to the requirements of section Ind 64.05, Table 1.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76.

Ind 64.55 Theaters and places of assembly. (1) Scope. This classification shall include auditoriums, arenas, armories, assembly halls, banquet halls, billiard rooms, bowling alleys, cafeterias, club rooms, dance halls, dining rooms, gymnasiums, lecture halls, lodge halls, playrooms, restaurants, school auditoriums, Sunday schools and places of worship, funeral home chapels, parochial schools, convents, indoor skating rinks, and theaters which accommodate more than 100 persons for entertainment, recreation, worship, or dining purposes.

Note: For areas that will accommodate less than 100 persons, see Ind 64.54.

(2) Ventilation. The air movement, supply and distribution for all occupancies under this classification shall conform to the requirements of section Ind 64.05, Table 1.

(3) Alternate service and capacity. Heating and ventilating systems installed in places of worship, Sunday schools, so-called community buildings and lodge halls may be arranged for selective delivery of
the entire service to either the first floor area or to the basement floor
area provided these areas are not used simultaneously.

(4) STAGES. The stage in any theater or assembly hall, for which a fire
curtain is required, shall be supplied with sufficient air or other means
to equalize the pressure to avoid deflecting the curtain.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.56 Schools and other places of instruction. (1) SCOPE. This
classification shall apply to all public and private schools, colleges, uni-
versities, academies, seminaries, libraries, museums, art galleries, all
places used for vocational instruction and research such as laboratories,
shops, science rooms, and all parts of buildings used for instructional
purposes.

(2) VENTILATION. The air movement, supply and distribution for all
occupancies under this classification shall conform to the requirements
of section Ind 64.05, Table 1. For corridors provided with lockers, the air
movement shall not be less than 10 cubic feet per minute per lineal foot
of corridor. This air supply shall be accomplished by means of air inlets
admitting air from adjacent classrooms or by a direct tempered air sup-
ply.

Note: This rule does not apply to corridors furnished with coat hooks.

(3) SCHOOL SHOP EQUIPMENT AND LABORATORY EXHAUST. An exhaust
system, in accordance with the requirements of section Ind 64.54 (3),
shall be provided for all equipment and processes that create dust,
fumes, vapors and gases injurious to health. Makeup air may be trans-
ferred from other areas of the building to replace the air exhausted from
the equipment or process.

Register, December, 1978, No. 276

Ind 64.57 Hospitals and nursing homes. (1) SCOPE. This classifica-
tion shall include hospitals, nursing homes, public health centers and
treatment centers where medical services are provided for treatment
and care of “bedfast patients.”

Note #1: A “bedfast patient” is a person who is normally confined to a bed or chair.

Note #2: For additional requirements, refer to Wis. administrative codes of the state de-
partment of health and social services.

(2) VENTILATION. The air movement, supply and distribution shall
conform to the requirements of section Ind 64.05, Table 1, and the fol-
lowing:

Note: The department of health and social services requires a positive pressure rela-
tionship, with respect to adjacent areas, in corridors, operating rooms, delivery rooms, nurseries,
day room areas, laboratories with media transfer, and nurses stations which are located in
corridors.

(a) Exhaust ventilation shall be provided on the basis of 2 cubic feet
per minute for each square foot of floor area from such rooms as baths,
laboratories, laundries, anesthetic storage, bedpan, sterilizing, soiled
utility, soiled linen, and janitor closets.

Register, December, 1976, No. 306
(b) The heating and ventilating system serving such rooms as operating, anesthesia, recovery, labor, delivery, nursery, isolation, therapy, and autopsy shall satisfy the following conditions:

1. A minimum air movement of not less than 6 air changes per hour.
2. Outside air of not less than 6 air changes per hour shall be provided.
3. The recirculation of air is not permitted in autopsy rooms.
4. Recirculation of air shall only be permitted within the system serving an individual room.
5. Mechanical exhaust shall be provided.
6. The relative humidity in rooms where anesthetic gases are used shall be maintained at not less than 50%.

(c) Private rooms, semi-private wards, day rooms, and nurses stations shall be ventilated in accordance with the requirements of section Ind 64.05, Table 1, unless an openable sash area has been provided and the content of the space is in excess of 400 cubic feet per occupant.

Note: See sections Ind 57.17 and 57.19.

(d) The air movement in corridors and halls shall be not less than 10 cubic feet per minute per lineal foot of corridor or hall.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.58 Penal institutions and places of detention. (1) Scope. This classification shall include corridors and areas of compulsory occupancy in penal institutions, mental hospitals and other places of detention.

(2) Ventilation. The air movement, supply and distribution for all areas of this class shall be accomplished by mechanical means and shall conform to the requirements of section Ind 64.05, Table 1. The air movement through the corridors shall be not less than 10 cubic feet per minute per lineal foot of corridor.

(3) Overnight Lock-Ups. Where cells are provided for not more than 6 occupants for the purpose of overnight detention only, exhaust ventilation shall be provided on the basis of 6 air changes per hour for the occupied area.

History: Cr. Register, December, 1975, No. 340, eff. 1-1-76.

Ind 64.59 Residential occupancies. (1) Scope. This classification shall include all apartments, row houses, rooming houses, hotels, motels, dormitories, and all other places of abode.

Note: See section Ind 57.001 (2) for definition of "place of abode."

(2) Ventilation. The air movement, supply and distribution for all areas of this class shall conform to the requirements of section Ind 64.05, Table 1.

History: Cr. Register, December, 1978, No. 276
(3) RETURN AIR DUCTS. Unlined wood joists and stud spaces will be permitted to be used as return air ducts in individual living units provided with individual heating and ventilating systems.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. (3), Register, December, 1976, No. 252, eff. 1-1-77.

Ind 64.60 Day care facilities. (1) SCOPE. This classification shall include all public and private day care centers accommodating more than 4 children, including all buildings or parts of buildings used as child day care facilities.

(2) VENTILATION. The air movement, supply and distribution for all areas of this class shall conform to the requirements of section Ind 64.05, Table 1.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76.

Ind 64.61 Repair areas. (1) SCOPE. This classification includes all areas where motor-driven vehicles are repaired.

(2) VENTILATION. The air movement, supply and distribution shall be provided in accordance with the requirements of section Ind 64.05, Table 1. The exhaust air shall be drawn from not more than 18 inches above the floor.

(3) TAIL PIPE EXHAUST. (a) Mechanical exhaust system. A mechanical exhaust system shall be provided in the repair area to remove the exhaust fumes from internal combustion engines. The duct system shall be designed with sufficient outlets to accommodate the total number of vehicles in the repair area. A flexible hose, equipped with a device for connecting it to the exhaust pipe of the vehicle and to the exhaust system, shall be provided. Each outlet shall be provided with a shut-off valve that can be closed when not in use. The blower capacity shall be sufficient to exhaust a volume of air not less than 100 cubic feet per minute for each opening.

(b) Nonmechanical exhaust. A noncombustible flexible tube or hose not more than 10 feet long, connected to the engine exhaust (tail pipe) and terminating outside the building, may be used in lieu of the requirements stated in (a) above.

Note: The requirements stated in (2) need not be increased when satisfying requirements of either (3) (a) or (b). Also see Wis. Admin. Code Ch. Ind 1000-2000—Wis. Safety and Health Code.

(4) MISCELLANEOUS REPAIR AREAS. Areas involved in the servicing of small internal combustion engines such as lawnmowers, snowmobiles, chainsaws, cycles, boat engines, and similar types of engines, and battery charging areas, shall be provided with at least 3/4 cubic foot per minute of outside air per square foot of enclosed service floor area and an equivalent exhaust. Exhaust from battery charging areas shall be from the top of the area.

(5) CONTAMINANTS. If the provisions of this section do not provide sufficient ventilation to meet the standards for threshold limit values covered in Wis. Admin. Code Ch. Ind 1000-2000—Wis. Safety and Health Code, the additional exhaust requirements with an equivalent volume of
outside air shall be provided to satisfy the requirements found in Ch. Ind 1000-2000.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. (4), Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.62 Vehicle service buildings. (1) Scope. Buildings of this classification shall include liquid fuel dispensing stations and/or where vehicles can be driven into the building for washing, greasing, oil change, motor tune-up or repair, tire replacement, body repair, and similar operations.

(2) Ventilation. The air movement, supply and distribution shall be provided in accordance with the requirements of section Ind 64.05, Table 1. The exhaust air shall be drawn from not more than 18 inches above the floor.

(a) Repair area ventilation. All service and/or workroom areas involving engine tune-up or repair requiring the operation of internal combustion engines shall be provided with ventilation to satisfy the requirements of section Ind 64.61 above.

(b) Vehicle washing facilities. Buildings or portions of buildings having a capacity of and used exclusively for washing 2 or more vehicles simultaneously shall be supplied and exhausted with a volume of outside air equal to 1/2 cubic foot per minute per square foot of floor area.

1. The minimum floor area calculated for wash areas provided with vehicle conveyor systems shall be based on that portion of the floor located between the termination of the conveyor system and the vehicle exit door.

(3) Contaminants. If the provisions of this section do not provide sufficient ventilation to meet the standards for threshold limit values covered in Wis. Adm. Code Ch. Ind 1000-2000—Wis. Safety and Health Code, the additional exhaust requirements with an equivalent volume of outside air shall be provided to satisfy the requirements found in Ch. Ind 1000-2000.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

Ind 64.63 Garages. (1) Scope. This classification includes all buildings, or parts of buildings, where motor-driven vehicles are stored.

(2) Ventilation. The air movement, supply and distribution shall be provided in accordance with the requirements of section Ind 64.05, Table 1. Live storage areas shall be provided with exhaust air drawn from a height not more than 18 inches above the floor unless the following requirements are satisfied:

(a) The floor is located at or above grade.

(b) A permanent open-walled area of at least 30% of the total wall area is provided. The openings shall be distributed to permit circulation of air throughout the storage area.

Note # 1: A live storage area is any area used for storage of fire trucks, tractors, automobiles, trucks, and similar self-propelled vehicles which are driven in and out of the storage area under their own power; it does not include areas where vehicles and equipment

Register, December, 1975, No. 970
Building and heating, ventilating
and air conditioning code.
are stored for seasonal periods, or areas where vehicles are displayed without batteries and where
the gasoline tanks of the vehicles are empty and free of fumes.

Note 2: The department will permit the use of a mechanical exhaust system in conjunction
with openings in the exterior walls to provide the ventilation required by Table 1.

(3) **Contaminants.** If the provisions of this section do not provide sufficient ventilation to meet the standards for threshold limit values covered in Wis. Adm. Code Ch. Ind 1000-2000—Wis. Safety and Health Code, the additional exhaust requirements with an equivalent volume of outside air shall be provided to satisfy the requirements found in Ch. Ind 1000-2000.

History: Cr. Register, December, 1978, No. 240, eff. 1-1-76.

**Ind 64.65 Automobile showrooms.** (1) **SCOPE.** This classification includes all showrooms with offices and occupancies adjacent to repair or live storage areas.

Note: A live storage area is any area used for storage of fire trucks, tractors, automobiles, trucks, and similar self-propelled vehicles which are driven in and out of the storage area under their own power; it does not include areas where vehicles and equipment are stored for seasonal periods, or areas where vehicles are displayed without batteries and where the gasoline tanks of the vehicles are empty and free of fumes.

(2) **VENTILATION.** The air movement, supply and distribution shall be provided in accordance with the requirements of section Ind 64.05, Table 1.

(a) **Separate ventilating system.** A separate ventilating system shall be provided for showrooms or offices where such occupancies are adjacent to repair or live storage areas.

Note: Ventilation is not required if an operable area is provided to conform with the requirements of section Ind 64.07.

(b) **Recirculation.** Air shall not be recirculated from any repair, live storage or service area unless the total volume of air in circulation is in excess of the ventilation required. Excess air may be recirculated.

(c) **Contaminants.** If the provisions of this section do not provide sufficient ventilation to meet the standards for threshold limit values covered in Wis. Adm. Code Ch. Ind 1000-2000—Wis. Safety and Health Code, the additional exhaust requirements with an equivalent volume of outside air shall be provided to satisfy the requirements found in Ch. Ind 1000-2000.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.

**Ind 64.65 General sanitation and service areas.** (1) **SCOPE.** This classification shall include toilet rooms, locker rooms, shower rooms and janitor closets.

Note 1: A janitor closet is a service closet with one or more plumbing fixtures.

Note 2: For exhaust ventilation requirements in hospital service areas, see section Ind 64.67.

Note 3: For exhaust ventilation requirements in places of employment, see section Ind 64.64.

Note 4: The use of wall registers within 6 inches of the floor, baseboard registers, and floor registers is prohibited in these areas. (See section Ind 62.67, Note.)

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76.
(2) Exhaust Ventilating Systems. Exhaust ventilating systems serving this class of occupancy shall not be used for any other service.

(3) Ventilation. The air movement, supply and distribution shall be provided in accordance with the requirements of section Ind 64.05, Table I.

(a) Exhaust ventilation. Exhaust ventilation shall be provided for all areas of this class unless otherwise exempted. The volume of air exhausted shall be provided at a rate of not less than 2 cubic feet per minute per square foot of floor area, or 60 cubic feet per minute per fixture (water closets and urinals). Mechanical exhaust ventilation shall be installed in toilet rooms having more than one fixture (water closets and urinals). The effectiveness of the exhaust shall be greater than the supply.

(b) Natural ventilation. Mechanical exhaust ventilation is not required from toilet rooms having one water closet or one urinal, or from janitor closets having one service sink or receptor, provided the room has an outside window of at least 4 square feet with at least 2 square feet that is openable.

1. Exception. Mechanical exhaust ventilation may be omitted from toilet rooms or bathrooms having one water closet or urinal, or from janitor closets having one service sink or receptor, where an approved ductless air circulating and treatment device is provided.

Note #1: The department will accept ductless air circulating and treatment devices conforming to standard C-10 as adopted by the National Sanitation Foundation (NSF).

Note #2: The department of health and social services prohibits the use of ductless air circulating and treatment devices in licensed hospitals and nursing homes. (See Wis. Adm. Code section H 32.27 (2) (a) and Hill-Burton, "Minimum Requirements of Construction and Equipment for Hospital and Medical Facilities," HRA publication no. (HRA) 76-4000.)

(c) Locker, shower and toilet room ventilation. Adjoining locker, shower and toilet rooms shall be exhausted at the rate of 2 cubic feet per minute per square foot of area, based on the floor area of the largest space. The rooms shall be provided with tempered makeup air supplied directly from the outside or transferred from other areas of the building in accordance with the requirements of section Ind 64.18. A negative pressure relationship shall be maintained in the shower and toilet rooms with respect to the locker room.

History: Cr. Register, December, 1975, No. 240, eff. 1-1-76; am. (1), cr. (3) and r. (4), Register, December, 1976, No. 252, eff. 1-1-77; cr. (3) (b), Register, December, 1977, No. 264, eff. 1-1-78.

Ind 64.66 Natatoriums. (1) Pool Ventilation. In natatoriums, a volume of tempered outside air supply and exhaust shall be provided at the rate of at least 2 cubic feet per minute per square foot of pool surface. The volume of tempered outside air and exhaust may be reduced to a minimum of one cubic foot per minute per square foot of pool surface provided humidity controls are used to limit the relative humidity to 60%.

Register, December, 1978, No. 276
Building and heating, ventilating and air conditioning code
WISCONSIN ADMINISTRATIVE CODE

(2) AIR MOVEMENT. The air movement in a natatorium shall not be less than 6 air changes per hour unless mechanical cooling is provided to satisfy the heat gain requirement for the space.

History: Cr. Register, December, 1976, No. 252, eff. 1-1-77.

Ind 64.67 Kitchens (1) Scope. This classification includes all areas where food is prepared (except in domestic science educational facilities from grades kindergarten through 12, and single unit apartments in hotels, motels and apartment buildings).

(2) EXHAUST VENTILATION SYSTEMS. Exhaust ventilation systems serving this occupancy shall not be used for any other service.

(a) Required exhaust ventilation. Mechanical exhaust ventilation shall be provided at a rate not less than 2 cubic feet per minute per square foot of floor area for every occupied area within the scope of this section.

(b) Required exhaust hood. Exhaust hoods shall be required where frying and/or broiling is done (includes deep-fat frying and surface frying), and where cooking is a regular commercial operation (includes ranges, griddles, fryers, broilers and similar grease-producing equipment).

(3) REPLACEMENT AIR. Adequate replacement air shall be provided to equal the air being exhausted by all exhaust systems.

(4) RECIRCULATION OF AIR. Recirculation of air as described under section Ind 64.06 (5) is prohibited during occupied periods.

(5) EXHAUST HOOD REQUIREMENTS. (a) Size of hood. The horizontal inside dimensions for canopy hoods shall be sized to effectively capture grease vapors, but in no case shall these dimensions be less than the overall horizontal dimensions of the grease-producing equipment. The horizontal inside dimensions for noncanopy, prefabricated backshelf hoods may be less than the overall horizontal dimensions of the grease-producing equipment.

(b) Exhaust rates. The kitchen exhaust hood shall be provided with a capture velocity to effectively capture the grease vapors and may be designed through engineering analysis or the empirical design formulas stated below:

1. Canopy hood. Hood open on all 4 sides: \( Q = 150 \, A \) (area).

2. Wall hood. Hood open on 3 sides or less: \( Q = 100 \, A \) (area).

3. Slotted-type hood. \( V = 350 \, \text{feet per minute} \) through the slot opening. The slot shall be at least 3 inches in width.

4. Noncanopy hood. The minimum volume of exhaust air for noncanopy type hoods (prefabricated backshelf) shall be not less than \( Q = 300 \, L \) (length).

Note: \( Q \) equals the exhaust air in cubic feet per minute; \( A \) equals the area of the hood over the grease-producing equipment in square feet; \( V \) equals the velocity in feet per minute; and \( L \) equals the total length in feet of the cooking appliance(s) being ventilated, and measured parallel to the front edge of the appliance(s).
(c) Materials. Hoods shall be constructed and supported by steel not less than .0478 inch U.S. standard gage (No. 18 manufacturers standard gage) or stainless steel not less than .0359 inch U.S. standard gage (No. 20 manufacturers standard gage) or other materials of equivalent strength, fire and corrosion resistance.

Note: The department will permit hoods constructed of aluminum, the thickness of which is not less than .050 inch.

(d) Seams. All seams and joints shall be liquid-tight.

(e) Grease-removal devices. Approved grease extractors, grease filters or other grease-removal devices shall be provided.

(f) Exposed hood surfaces. Hood surfaces and exposed exhaust ducts within 18 inches of combustible material shall be protected in accordance with the requirements of section Ind 64.67 (6) (f).

(g) Concealed hood surfaces. Hood surfaces that are concealed by or recessed into adjoining construction shall be protected in accordance with the requirements of section Ind 64.67 (6) (f).

(h) Double-wall hoods utilizing outdoor air. When hoods are connected to ducts supplying outside air, performance data shall be submitted.

Note: Double-wall hoods provided with a supply of outdoor air conserve energy.

(6) EXHAUST DUCTS FROM HOODS. (a) Design. All ducts shall lead, as directly as possible, to the exterior of the building without forming dips or traps which collect residues. Ducts exposed to the exterior shall be protected with a suitable weatherproof coating.

Note: Temperatures in excess of 2000° F may be experienced within ducts in the event of fire. A means of expansion of long ducts should be considered.

(b) Materials. Ducts shall be constructed of and supported by steel not lighter than .0598 inch U.S. standard gage (No. 16 manufacturers standard gage) or stainless steel not lighter than .0478 inch U.S. standard gage (No. 18 manufacturers standard gage) or other materials of equivalent strength, fire and corrosion resistance.

(c) Seams and joints. All seams and joints shall be liquid-tight.

(d) Clean-out openings. Accessible clean-out openings at the sides of ducts shall be provided at each change of direction of the duct for inspection and servicing.

(e) Interior ducts. Ducts shall not pass through required fire walls or partitions.

(f) Concealed exhaust ducts. 1. Horizontal ducts. Horizontal concealed ducts connected to hoods that pass through any other area of the building, including suspended ceilings, shall be protected with insulating material to withstand a flue temperature of not less than 1000° F. The temperature of the exposed surface of the insulating material shall not exceed 250° F above the normal ambient temperature of 60° F.

Note: The department will accept the use of masonry chimneys or manufactured chimneys which are tested and approved for use at a flue gas temperature of not less than 1000° F, or
294 WISCONSIN ADMINISTRATIVE CODE

Heating, Ventilating and Air Conditioning

In situating materials for fire endurance systems listed in the Fire Resistance Index published by Underwriters' Laboratories, Inc.

2. Vertical ducts. Vertical concealed ducts that pass through any other area of the building, including suspended ceilings, in one- and 3-story buildings, shall be protected with insulating material as specified in 1. above, or shall be located in 2-hour noncombustible fire-resistant enclosures. In buildings of 3 or more stories, vertical ducts shall be located in 2-hour noncombustible fire-resistant enclosures.

(g) Exposed exhaust ducts. Exposed exhaust ducts connected to hoods or canopies shall be located not less than 18 inches from combustible material unless the duct is protected in accordance with the requirements of (f) above.

(h) Air discharge. The air discharge shall be directed away from the roof or combustible materials.

(i) Dampers. Fire dampers shall not be installed in kitchen exhaust duct systems unless the assembly includes an approved extinguishing system designed to operate with a fire damper in the closed position.

History: Cr. Register, December, 1976, No. 240, eff. 1-1-76; renum. from 64.66, r. and recr. (6) (a) to (d), renum. (6) (b) to (6) to be 03 (6) to 03, eff. 03 (6), Register, December, 1976, No. 202, eff. 1-1-77; am. 05 (6), Register, December, 1977, No. 351, eff. 1-1-78; am. (6) and 05 (6) 1, Register, December, 1978, No. 276, eff. 1-1-79.

Ind 64.68 Seasonal occupancies. When approved in writing by the department, heating requirements may be waived (but not ventilation required by section Ind 64.06, Table 1) during the period of June 1 through September 15 for the following or similar occupancies: drive-in eating places, club houses, outdoor toilets, camp lodge buildings, canning factories, and migrant labor camps (also see chapter Ind 49—Grant Labor Camps).

Note: Rules on migrant labor can be found in chapter Ind 201.
