INTRODUCTION

Purpose and Structure

The Legislature, by s. 35.93 and ch. 227, Stats., directed the publication of the rules of executive agencies having rule-making authority in a loose-leaf, continual revision system known as the Wisconsin Administrative Code. The Code is kept current by means of new and replacement pages. The pages are issued monthly, together with notices of hearings, notices of proposed rules, notices of emergency rules, instructions for insertion of new material, and other information relating to administrative rules and the administrative rulemaking process. This service is called the Wisconsin Administrative Register, and comes to the subscriber near the middle and at the end of each month. Code pages are issued to subscribers only with the end of the month Register. The editing and publishing of the Register and Code is done by the Revisor of Statutes Bureau, Suite 800, 131 W. Wilson St., Madison, Wisconsin, 53703. E-mail: gary.poulson@legis.state.wi.us Telephone (608-266-7275).

Availability

The complete code and the upkeep service are distributed to the county law libraries; to the libraries of the University of Wisconsin Law School and Marquette University Law School; to the State Historical Society; to the Legislative Reference Bureau and to the State Law Library, and to certain designated public libraries throughout the state.

The sale and distribution of the printed Register, Code and of its parts is handled by Department of Administration, Document Sales, P.O. Box 7840, Madison, Wisconsin 53707. (608-266-3358 information) (1-800-362-7253 or 608 264-9419 charge card orders).

The entire Code and Registers from January, 1996, can be found on the WisLaw CD-ROM. End-user license and subscription order forms are available from Document Sales and Distribution.

The Code and Register can also be found on the internet at www.legis.state.wi.us/rsb

Arrangement and Table of Contents

The Code is arranged in the complete set alphabetically by agency. Certain descriptors such as “Department” and “Wisconsin” are ignored for arrangement purposes. Several agencies further subdivide their rules either by program e.g. Department of Commerce – Plumbing or by division within the agency e.g. Department of Health & Family Services – Health, chs. HFS 110. These Codes are arranged in numerical order within the appropriate alphabetical arrangement for the agency.

Each agency adopts a prefix to identify their rules. For example, the Department of Natural Resources uses “NR” before each chapter number.

Each Code with more than one chapter will have a table of chapters. After the title of each chapter will be the page numbers on which the chapter begins. Each chapter will have a table of sections.

History Notes

Each page of the Code as it was originally filed and printed pursuant to the 1955 legislation, had a date line “1-2-56”. A rule which is revised or created subsequent to the original printing date is followed by a history note indicating the date and number of the Register in which it was published and the date on which the revision or creation of the rule became effective. Additions to a section’s history note will be shown in bold face when those affected code sections are first released. The absence of a history note at the end of a section indicates that the rule has remained unchanged since the original printing in 1956. The date line at the bottom of the page indicates the month in which the page was released, but does not necessarily mean a substantive change has occurred on that page. Some common abbreviations used in the history notes are: cr. created, am. amend, r. repeal, recr. recreate, renum. renumber, eff. effective and emerg. emergency.

In some instances an entire chapter has been repealed and recreated or renumbered subsequent to the original printing date. When this occurs a note has been placed at the beginning of the chapter after the table of sections to contain this information. A separate history note appears after each section indicating the date when the revision or creation became effective.

Emergency Rules

The Legislature has granted state agencies the authority to enact rules without using the normal rule-making process by publishing those rules in the official state newspaper. To justify the use of the emergency rule process, an agency must find that the preservation of the public peace, health, safety or welfare will be jeopardized without the emergency rule. Readers should review the current Wisconsin Administrative Register to see if a particular published rule is also affected by an emergency rule. Most emergency rules are eventually adopted as permanent rules and published in the Code.

Index

The index for the complete Wisconsin Administrative Code will be found in the last volume of the complete set. It will be recompiled, reprinted and distributed at least 3 times a year. Some Codes have a separate Index prepared by the agency involved. Agency prepared indexes tend to be more comprehensive than the general index prepared by the Revisor of Statutes. See the Uniform Dwelling Code (chs. Comm 20-25) and the Building and Heating Code (chs. Comm 50-64) as examples.

DEPARTMENT OF COMMERCE

Chapter

Plumbing

Comm 81  Definitions and standards (p. 1)
Comm 82  Design, construction, installation, supervision and inspection of plumbing (p. 19)
          Appendix (p. 69)
Comm 83  Private sewage systems (p. 151)
          Appendix (p. 169)
Comm 84  Plumbing products (p. 191)
          Appendix (p. 205)
Comm 85  Subdivisions not served by public sewers (p. 211)
          Appendix (p. 219)
Comm 86  Boat and on-shore sewage facilities (p. 223)
Comm 87  Private sewage system replacement or rehabilitation grant program (p. 227)
Chapter Comm 81
DEFINITIONS AND STANDARDS

Comm 81.01 Definitions. In chs. Comm 81 to 87, except as otherwise specifically defined:
(1) "Accepted engineering practice" means a specification, standard, guideline or procedure in the field of plumbing or related thereto, generally recognized and accepted as authoritative documented through national standards or specifications.
(2) "Accessible" when applied to a fixture, appliance, pipe, fitting, valve or equipment, means having access for maintenance, but which first may require the removal of an access panel or similar obstruction.
(3) "Aerobic treatment component" means a unit for the treatment of wastewater that utilizes the principle of oxidation for biological decomposition.
(4) "Agent" means an individual or agency recognized by the department to act on the department's behalf relative to a specific activity or function.
(5) "Air-break" means a piping arrangement for a drain system where the waste from a fixture, appliance, apparatus or device discharge by means of indirect or local waste piping terminating in a receptor at a point below the flood level rim of the receptor and above the inlet of the trap serving the receptor.
(6) "Air-gap, drain system" means the unobstructed vertical distance through the free atmosphere between the outlet of indirect or local waste piping and the flood level rim of the receptor into which it discharges.
(7) "Air-gap, water supply system" means the unobstructed vertical distance through the free atmosphere between the lowest opening from any pipe or faucet supplying water to a tank or plumbing fixture and the flood level rim or spill level of the receptacle.
(8) "Anaerobic treatment component" means a unit for the treatment of wastewater which utilizes molecular oxygen in the absence of free oxygen for biological respiration and decomposition.
(9) "Approved" means acceptance documented in writing by the department.
(10) "Apparatus" means a manufactured device or prefabricated assembly of component parts which is an adjunct to a plumbing product or plumbing system.
(11) "Area drain" means a receptor designed to collect storm waters from an open area.
(12) "Areawide water quality management plan" means those plans prepared by the department of natural resources, including those plans prepared by agencies designated by the governor under the authority of ss. 281.11, 281.12 (1), 281.15, and 283.83, Stats., for the purpose of managing, protecting and enhancing groundwater and surface water of the state.
(13) "Aspirator" means a fitting or device supplied with water or other fluid under positive pressure which passes through an integral orifice or constriction causing a vacuum.
(14) "Autopsy table" means a fixture or table used for post-mortem examination.
(15) "Automatic fire sprinkler system" has the meaning specified under s. 145.01 (2), Stats.

Comm 81.02 Incorporation of standards by reference.

Register, April, 2000, No. 332
(31) “Blackwater” means wastewater contaminated by human body waste, toilet paper and any other material intended to be deposited in a receptacle designed to receive urine or feces.

(32) “BOD” or “biological oxygen demand 5 day” means a measure of the amount of biodegradable organic matter in water.

(33) “Boiler blow-off basin” means a vessel designed to receive the discharge from a boiler blow-off outlet and to cool the discharge to a temperature that permits safe entry into the drain system.

(34) “Branch” means a part of a piping system other than a riser, main or stack.

(35) “Branch interval” means the vertical distance along a drain stack measured from immediately below a branch drain connection to immediately below the first lower branch drain connection that is 8 feet or more below.

Note: See ch. Comm 82 Appendix for an illustration depicting branch intervals.

(36) “Branch vent” means a vent serving more than one fixture drain.

(37) “B.T.U.” means British Thermal Units.

(38) “Building” means a structure for support, shelter or enclosure of persons or property.

(39) “Building drain” means horizontal piping within or under a building, installed below the lowest fixture or the lowest floor level from which fixtures can drain by gravity to the building sewer.

(40) “Building drain branch” means a fixture drain which is individually connected to a building drain and is ventilated by means of a combination drain and vent system.

(41) “Building drain, sanitary” means a building drain which conveys wastewater consisting in part of domestic wastewater.

(42) “Building drain, storm” means a building drain which conveys storm water wastes or clear water wastes, or both.

(43) “Building permit” means any written permission from a municipality that allows construction to commence on a structure.

(44) “Building sewer” means that part of the drain system not within or under a building which conveys its discharge to a public sewer, private interceptor, main sewer, private onsite wastewater treatment system or other point of disposal.

(45) “Building sewer, sanitary” means a building sewer which conveys wastewater consisting in part of domestic wastewater.

(46) “Building sewer, storm” means a building sewer which conveys storm water wastes or clear water wastes, or both.

(47) “Building subdrain” means the horizontal portion of a drain system which does not flow by gravity to the building sewer.

(48) “Building subdrain branch” means a fixture drain which is individually connected to a building subdrain and is ventilated by means of a combination drain and vent system.

(49) “Burr” means a roughness or metal protruding from the walls of a pipe usually as the result of cutting the pipe.

(50) “Business establishment” means any industrial or commercial organization or enterprise operated for profit, including but not limited to a proprietorship, partnership, firm, business trust, joint venture, syndicate, corporation or association.

(51) “Camping unit transfer container” means a type of stationary holding tank used to collect and hold wastewater discharges generated by an individual camping trailer or recreational vehicle.

(52) “Catch basin” means a watertight receptacle built to arrest sediment of surface, subsoil or other waste drainage, and to retain oily or greasy wastes, so as to prevent their entrance into the building drain or building sewer.

(53) “Cesspool” means an excavation which receives domestic wastewater by means of a drain system without pretreatment of the wastewater and retains the organic matter and solids permitting the liquids to seep from the excavation.

(54) “Circuit vent” means a method of venting 2 to 8 traps or trapped fixtures without providing an individual vent for each trap or fixture.

(55) “Cleanout” means an accessible opening in a drain system used for the removal of obstructions.

(56) “Clear water wastes” means liquids other than storm water, having no impurities or where impurities are below a minimum concentration considered harmful by the department, including but not limited to noncontact cooling water and condensate drainage from refrigeration compressors and air conditioning equipment, drainage of water used for equipment chilling purposes and cooled condensate from steam heating systems or other equipment.

(57) “Cold water” means water at a temperature less than 85°F.

(58) “Combination fixture” means a fixture combining one sink and laundry tray or a 2- or 3-compartment sink or laundry tray in one unit.

(59) “Combination drain and vent system” means a specially designed system of drain piping embodying the wet venting of one or more fixtures by means of a common drain and vent pipe adequately sized to provide free movement of air in the piping.

(60) “Common vent” means a branch vent connecting at or downstream from the junction of 2 fixture drains and serving as a vent for those fixture drains.

(61) “Conductor” means a drain pipe inside the building which conveys storm water from a roof to the storm drain or storm sewer.

(62) “Contaminant load” means the concentrations of substances in a wastewater stream.

(63) “Corporation cock” means a valve:
(a) Installed in a private water main or a water service at or near the connection to a public water main; or
(b) Installed in the side of a forced main sewer to which a forced building sewer is connected.

(64) “Critical level” means the reference point on a vacuum breaker that must be submerged before backflow can occur. When the critical level is not indicated on the vacuum breaker, the bottom of the vacuum breaker shall be considered the critical level.

(65) “Cross connection” means a connection or potential connection between any part of a water supply system and another environment containing substances in a manner that, under any circumstances, would allow the substances to enter the water supply system by means of back siphonage or back pressure.

(66) “Cross connection control device” means any mechanical device which automatically prevents backflow from a contaminated source into a potable water supply system.

(67) “Curb stop” means a valve placed in a water service or a private water main, usually near the lot line.

(68) “Dead end” means a branch leading from a drain pipe, vent pipe, building drain or building sewer and terminating at a developed length of 2 feet or more by means of a plug, cap or other closed fitting.

(69) “Department” means the department of commerce.

(70) “Design wastewater flow” means 150% of the estimated wastewater flow generated by a dwelling, building or facility.

(71) “Determination of failure” has the meaning specified under s. 145.245 (1) (a), Stats.

Note: Section 145.245 (1) (a), Stats., reads: “Determination of failure” means any of the following:
1. A determination that a private sewage system is failing, according to the criteria under sub. (4), based on an inspection of the private sewage system by an employee of the state or a governmental unit who is certified to inspect private sewage systems by the department.
2. A written enforcement order issued under s. 145.02 (3) (f), 145.29 (2) (f) or 281.19 (2).
3. A written enforcement order issued under s. 254.59 (1)(b) by a governmental unit.
(72) “Developed length” means the length of pipe line measured along the centerline of the pipe and fittings.

(73) “Diameter” means in reference to a pipe the nominal inside diameter of the pipe.

(74) “Disinfection unit” means a type of POWTS treatment component, excluding a soil-based POWTS treatment component, that utilizes a chemical or photoelectric process to reduce the wastewater fecal coliform contaminant load.

(75) “Disposal zone” means a dimensional volume of in situ soil that receives wastewater for treatment or distributes final effluent for dispersal.

(76) “Distribution cell” means a dimensional zone that is part of a POWTS treatment or dispersal component where wastewater is disseminated into in situ soil or engineered soil.

(77) “Documented data” means data which is developed in accordance with scientifically valid analytical protocols including field trials where appropriate, is subjected to peer review, results from more than one study, and consistent with other credible research.

(78) “Domestic wastewater” means the type of wastewater, not including storm water, normally discharged from or similar to that discharged from plumbing fixtures, appliances and devices including, but not limited to, sanitary, bath, laundry, dishwashing, garbage disposal and cleaning wastewaters.

(79) “Double check backflow prevention assembly” means a type of cross connection control device which is composed of 2 independently acting check valves internally force-loaded to a normally closed position, tightly closing shut-off valves located at each end of the assembly and fitted with test cocks.

(80) “Double check detector assembly backflow preventer” means a type of a double check backflow prevention assembly which includes a parallel flow meter to indicate leakage or unauthorized use of water downstream of the assembly.

Note: Downspout, see “leader”.

(81) “Drain” means any pipe that carries wastewater or water-borne wastes.

(82) “Drain system” includes all the piping or any portion of the piping within public or private premises which conveys wastewater to a legal point of disposal, but does not include the mains of public sewer systems or a private onsite wastewater treatment system or public sewage treatment or disposal plant.

(83) “Dwelling” means a structure, or that part of a structure, which is used or intended to be used as a home, residence or sleeping place by one person or by 2 or more persons maintaining a common household, to the exclusion of all others.

(84) “Effluent” means liquid discharged from a POWTS treatment component.

(85) “Ejector” means an automatically operated device to elevate wastewater by the use of air under higher than atmospheric pressure.

(86) “Elevation” or “EL” means the vertical distance from the datum to a point under investigation.

(87) “Enforcement standard” or “ES” has the meaning specified under s. 160.01 (2), Stats.

Note: Section 160.01 (2), Stats., reads: “Enforcement standard” means a numerical value expressing the concentration of a substance in ground water which is adopted under ss. 160.07 and 160.09.

(88) “Engineered soil” means a mineral product that is equivalent to in situ soil for which treatment capability has been credited under Table 83.44–3, or superior to in situ soil in its ability to treat or disperse domestic wastewater from a POWTS.

(89) “Engineered system” means a system designed to treat the intent of the code but not the enumerated specifications of the state plumbing code.

(90) “Estimated wastewater flow” means the typical quantity of domestic wastewater generated daily by a dwelling, building or facility.

(91) “Experimental system” means a type of plumbing system from which valid and reliable data are being sought to demonstrate compliance with the intent of chs. Comm. 82 to 84.

(92) “Failing private onsite wastewater treatment system” has the meaning specified under s. 145.245 (4), Stats.

Note: Section 145.245 (4) reads: “Failing private sewage system” means a private sewage system which causes or results in any of the following conditions:
(a) The discharge of sewage into surface water or groundwater.
(b) The introduction of sewage into zones of saturation which adversely affects the operation of a private sewage system.
(c) The discharge of sewage to a drain tile or into zones of bedrock.
(d) The discharge of sewage to the surface of the ground.
(e) The failure to accept sewage discharges and backup of sewage into the structure served by the private sewage system.

(93) “Farm” means a parcel of 35 or more acres of contiguous land that is devoted primarily to agricultural use, as defined under s. 91.01 (1) and (5), Stats.

Note: Section 91.01 (1) and (5), Stats., reads: “Agricultural use” means: beekeeping; commercial feedlots; dairying; egg production; floriculture; fish or fur farming; forest and game management; grazing; livestock raising; orchards; plant greenhouses and nurseries; poultry raising; raising of grain, grass, hay and seed crops; raising of fruits, nuts and berries; soft farming; planting in federal programs in return for payment in kind; owning land, at least 35 acres of which is enrolled in the conservation reserve program under 16 USC 3831 to 3836; participating in the milk production termination program under 7 USC 1446 (d); and vegetable raising.

Note: Devoted primarily to agricultural use for at least 12 consecutive months during the preceding 36-month period.

(94) “Faucet” means a valve end of a water pipe by means of which water can be drawn from or held within the pipe.

(95) “Final effluent” means the effluent from the last POWTS treatment component.

(96) “Fixture drain” means the drain from a fixture to a junction with another drain pipe.

(97) “Fixture supply” means that portion of a water distribution system serving one plumbing fixture, appliance or piece of equipment.

(98) “Fixture supply connector” means that portion of water supply piping which connects a plumbing fixture, appliance or piece of equipment to the water distribution system.

(99) “Fixure unit, drainage” or “fu” means a measure of the probable discharge into the drain system by various types of plumbing fixtures. The drainage fixture unit value for a particular fixture depends on its volume rate of discharge, or the time duration of a single discharge operation, and on the average time between successive operations.

(100) “Fixture unit, supply” or “su” means a measure of the probable hydraulic demand on the water supply by various types of plumbing fixtures.

Note: The supply fixture unit value for a particular fixture depends on its volume rate of supply, on the time duration of a single supply operation, and on the average time between successive operations.

(101) “Flood fringe” has the meaning specified under s. NR 116.03 (14).

Note: Section NR 116.03 (14) reads: “Flood fringe” means that portion of a flood plain which is outside of the floodway, which is covered by flood water during regional flood. The term “flood fringe” is generally associated with standing water rather than flowing water.

(102) “Flood level rim” means the edge of the receptacle from which water overflows.

(103) “Floodplain” has the meaning specified under s. NR 116.03 (16).

Note: Section NR 116.03 (16) reads: “Floodplain” means that land which has been or may be covered by flood water during the regional flood. The floodplain includes the floodway, flood fringe, shallow depth flooding, flood storage and coastal floodplain areas.

(104) “Floodway” has the meaning specified under s. NR 116.03 (22).

Note: Section NR 116.03 (22) reads: “Floodway” means the channel of a river or stream, and those portions of the floodplain adjoining the channel required to carry the regional flood discharge.

(105) “Floor sink” means a receptor for the discharge from indirect or local waste piping installed with its flood level rim even with the surrounding floor.
(106) "Flow" means the volumetric measure of a liquid stream in a specified time.
(107) "Flushometer valve" means a device which discharges a predetermined quantity of water to fixtures for flushing purposes and is closed by direct water pressure.
(108) "Flush valve" means a device located at the bottom of a tank for flushing water closets and similar fixtures.
(109) "Garage, private" means a building or part of a building used for the storage of vehicles or other purposes, by a family or less than 3 persons not of the same family and which is not available for public use.
(110) "Garage, public" means a building or part of a building which accommodates or houses self-propelled land, air or water vehicles for 3 or more persons not of the same family.
(111) "Governmental unit" has the meaning specified under s. 145.01 (5), Stats.
Note: Section 145.01 (5), Stats., reads: "Governmental unit responsible for the regulation of private sewage systems" or "governmental unit", unless otherwise qualified, means the county, except that in a county with a population of 500,000 or more those terms mean the city, village or town where the private sewage system is located.
(112) "Graywater" means wastewater contaminated by waste materials, exclusive of urine, feces or industrial waste, deposited into plumbing drain systems.
(113) "Grease interceptor" means a receptacle designed to intercept and retain or remove grease or fatty substances.
(114) "Groundwater" means the meaning specified under s. 160.01 (4), Stats.
Note: Section 160.01 (4), Stats., reads: "Groundwater" means any of the waters of the state, as defined under s. 281.01 (18), occurring in a saturated subsurface geological formation of rock or soil.
(115) "Hand-held shower" means a type of plumbing fixture that includes a cross connection control device, a hose and a hand-held discharge piece such as a shower head or spray.
(116) "Health care facility" means any building or part of a building used for purposes such as a hospital, nursing home, and offices and clinics with operators for dentists or doctors.
(117) "Health care plumbing appliance" means a plumbing appliance, the function of which is unique to health care activities.
(118) "High groundwater" means zones of soil saturation which include perched water tables, shallow regional groundwater tables or aquifers, or zones that are seasonally, periodically or permanently saturated.
(119) "High groundwater elevation" means the higher of either the elevation to which the soil is saturated when observed as a free water surface, or the elevation to which the soil has been seasonally or periodically saturated as indicated by the highest elevation of redoximorphic features in the soil profile.
(120) "High hazard" means a situation where the water supply system could be contaminated with a toxic solution.
(121) "Holding tank" means a watertight receptacle for the collection and holding of wastewater.
(122) "Horizontal pipe" means any pipe or fitting which makes an angle of less than 45° with the horizontal.
(123) "Horizontal reference point" means a stationary, identifiable point to which horizontal dimensions can be related.
(124) "Hose connection backflow preventer" means a type of cross connection control device which consists of 2 independent checks, force-loaded or biased to a closed position, with an atmospheric vent located between the 2 check valves, which is force-loaded or biased to an open position, and a means for attaching a hose.
(125) "Hose connection vacuum breaker" means a type of cross connection control device which consists of a check valve member force-loaded or biased to a closed position and an atmospheric vent valve or means force-loaded or biased to an open position when the device is not under pressure.
(126) "Hot water" means water at a temperature of 110° F. or more.
(127) "Hot water storage tank" means a tank used to store water that is heated indirectly by a circulating water heater or by steam or hot water circulating through coils or by other heat exchange methods internal or external to the tank.
(128) "Human health hazard" has the meaning specified under s. 254.01 (2), Stats.
Note: Section 254.01 (2), Stats., reads: "Human health hazard" means a substance, activity or condition that is known to have the potential to cause acute or chronic illness or death if exposure to the substance, activity or condition is not abated.
(129) "Hydrostatic test" means a test performed on a plumbing system or portion thereof in which the system is filled with a liquid, normally water, and raised to a designated pressure.
(130) "Indian lands" means lands owned by the United States and held for the use or benefit of Indian tribes or bands or individual Indians, and lands within the boundaries of a federally recognized reservation that are owned by Indian tribes or bands or individual Indians.
(131) "Indirect waste piping" means drain piping which does not connect directly with the drain system, but which discharges into the drain system by means of an air break or air gap into a receptor.
(132) "Individual vent" means a pipe installed to vent a fixture trap.
(133) "Industrial wastewater" means the liquid wastes that result from industrial processes.
(134) "Infiltrative surface" means the plane within a POWTS treatment or dispersal component at which effluent is applied to an unsaturated soil or engineered soil.
(135) "In situ soil" means soil naturally formed or deposited in its present location or position and includes soil material that has been plowed using normal tillage implements and depositional material resulting from erosion or flooding.
(136) "Interceptor" or "separator" means a device designed and installed so as to separate and retain deleterious, hazardous or undesirable matter from wastes flowing through it.
(137) "Laboratory faucet backflow preventer" means a type of cross connection control device which consists of 2 independently acting check valves force-loaded or biased to a closed position and, between the check valves, a means for automatically venting to atmosphere which is force-loaded or biased to an open position.
(138) "Laboratory plumbing appliance" means a plumbing appliance, the function of which is unique to scientific experimentation or research activities.
(139) "Leaching chamber" means a product designed to support soil and create a cavity for the temporary storage of effluent and to provide an infiltrative surface for the distribution cell POWTS dispersal or treatment component.
(140) "Leader" means a pipe or channel outside a building which conveys storm water from the roof or gutter drains to a storm drain, storm sewer or to grade.
(141) "Lead-free" means a chemical composition equal to or less than 0.2% of lead.
(142) "Linear loading rate" means the amount of effluent applied daily along the landscape contour expressed in gallons per day per linear foot along a site contour.
(143) "Load factor" means the percentage of the total connected fixture unit flow rate which is likely to occur at any point in a drain system.
(144) "Local station" means a National Weather Service (NWS) precipitation station or other station accepted by the department as collecting precipitation data in accordance with NWS methods.
(145) "Local waste piping" means a portion of drain piping which receives the wastes discharged from indirect waste piping and which discharges those wastes by means of an air break or air gap into a receptor.
(146) "Local vent" means a pipe connecting to a fixture and extending to outside air through which vapor or foul air is removed from the fixture.

(147) "Low hazard" means a situation where the water supply system could be contaminated with a nontoxic substance.

(148) "Main" means the principal pipe artery to which branches may be connected.

(149) "Manhole" means an opening constructed to permit access by a person to a sewer or any underground portion of a plumbing system.

(150) "Manufactured dwelling" has the meaning specified under s. Comm. 20.07 (52) (a).

Note: Section Comm. 20.07 (52) (a) reads: "Manufactured dwelling" means any structure or component thereof which is intended for use as a dwelling and:
1. Is of concrete construction and fabricated or assembled on site or off site in manufacturing facilities for installation, connection or assembly and installation at the building site; or
2. Is a building of open construction which is made or assembled in manufacturing facilities away from the building site for installation, connection or assembly and installation on the building site and for which certification is sought by the manufacturer.

(151) "Mechanical joint" means a connection between pipes, fittings or pipes and fittings by means of a device, coupling, fitting or adapter where compression is applied around the center line of the pieces being joined, but which is not caulked, threaded, soldered, solvent cemented, brazed or welded.

(152) "Mobile home" means a vehicle as defined under s. 66.058 (1) (d), Stats.

Note: Section 66.058 (1) (d), Stats., reads: "Mobile home" is that which is, or was as originally constructed, designed to be transported by any motor vehicle upon a public highway and designed, equipped and used primarily for sleeping, eating and living quarters, or is intended to be so used; and includes any additions, attachments, annexes, foundations and appurtenances.

(153) "Mobile home drain connector" means the pipe that joins the drain piping for a mobile or manufactured home to the building sewer.

(154) "Mobile home park" has the meaning specified under s. 66.058 (1) (e), Stats.

Note: Section 66.058 (1) (e), Stats., reads: "Mobile home park" means any plot or plots of ground upon which 2 or more units, occupied for dwelling or sleeping purposes are located, regardless of whether or not a charge is made for such accommodation.

(155) "Multiple dwelling" means a building containing more than 2 dwelling units.

(156) "Multipurpose piping system" means a type of water distribution system conveying potable water to plumbing fixtures and appliances and automatic fire sprinklers with the intention of serving both domestic water needs and fire protection needs within an one- or 2- family dwelling or manufactured dwelling.

(157) "Municipality" means any city, town or county in this state.

(158) "Munsell soil color" means a color classification that specifies the relative degree of the color variables in terms of hue, value and chroma.

(159) "Navigable waters" has the meaning specified under s. NR 115.03 (5).

Note: Section NR 115.03 (5) reads: "Navigable waters" means Lake Superior, Lake Michigan, all natural inland lakes within Wisconsin and all streams, ponds, sloughs, flowages and other waters within the territorial limits of this state, including the Wisconsin portion of boundary waters, which are navigable under the laws of this state.

Under s. NR 281.31 (2) (d), Stats., reclassifying any other provision of law or administrative rule promulgated theretofore, shoreline ordinances required under s. 59.971, Stats., and this chapter do not apply to lands adjacent to farm drainage ditches if:
(a) Such lands are not adjacent to a navigable stream or river;
(b) Those parts of such drainage ditches adjacent to such lands were nonnavigable streams before ditching or had no previous stream history; and
(c) Such lands were maintained in a natural agricultural use.

(160) "Negative pressure" means a pressure less than atmospheric.

(161) "Nonpotable water" means water not safe for drinking, personal or culinary use.

(162) "Nonpublic" means, in the classification of plumbing fixtures, those fixtures in residences, apartments, living units of hotels and motels, and other places where the fixtures are intended for the use by a family or an individual to the exclusion of all others.

(163) "Nontoxic" means a probable human oral lethal dose of greater than 15 grams of solution per kilogram of body weight.

(164) "Occupancy" means the purpose for which a building, structure, equipment, materials, or premises, or part thereof, is used or intended to be used.

(165) "Oil interceptor" means a device designed to intercept and retain oil, lubricating grease or other similar materials.

(166) "Offset" means a combination of fittings or bends which brings one section of the pipe out of line but into a line parallel with the other section.

(167) "One or 2-family dwelling" means a building containing not more than 2 dwelling units.

(168) "Open air" means outside the building.

(169) "Ordinary high-water mark" has the meaning specified under s. NR 115.03 (6).

Note: Section NR 115.03 (6) reads: "Ordinary high-water mark" means the point on the bank or shore up to which the presence and action of surface water is so continuous as to leave a distinctive mark such as by erosion, destruction or prevention of vegetation, predominance of aquatic vegetation, or other easily recognized characteristic. Where the bank or shore at any particular place is of such character that it is difficult or impossible to ascertain where the point of ordinary high-water mark is, recourse may be had to the opposite bank of a stream or to other places on the shore of a lake or flowage to determine whether a given stage of water is above or below the ordinary high-water mark.

(170) "Participating governmental unit" means a governmental unit which applies to the department for financial assistance under s. Comm. 87.00, and which meets the conditions specified under s. 145.245 (9), Stats.

(171) "Peak flow" means the largest anticipated recurrent wastewater discharge to a private onsite wastewater treatment system.

(172) "Pipe applies atmospheric type vacuum breaker" means a type of cross connection control device where the flow of water into the device causes a float to close an air inlet port and when the flow of water stops the float falls and forms a check valve against back siphonage and at the same time opens the air inlet port to allow air to enter and satisfy the vacuum.

(173) "Pit privy" means an enclosed nonportable toilet into which nonwater-carried human wastes are deposited to a subsurface storage chamber that is not watertight.

(174) "Pitch" means the gradient or slope of a line of pipe in reference to a horizontal plane.

(175) "Place of employment" has the meaning specified under s. 101.01 (11), Stats.

Note: Section 101.01 (11), Stats., reads: "Place of employment" includes every place, whether indoors or ouside underground and the premises appurtenant thereto where either temporarily or permanently any industry, trade or business is carried on, or where any process or operation, directly or indirectly related to any industry, trade or business, is carried on, and where any person is, directly or indirectly, employed by another for direct or indirect gain or profit, but does not include any place where persons are employed in private domestic service which does not involve the use of mechanical power or in farming. "Farming" includes those activities specified in s. 102.04 (3), and also includes the transportation of farm products, supplies or equipment directly to the farm by the operator of said farm or employees for the use thereon, if such activities are directly or indirectly for the purpose of producing commodities for market, or as an accessory to such production. When used with relation to building codes, "place of employment" does not include an adult family home, as defined in s. 500.01 (1), or, except for the purposes of s. 101.11, 1 previously constructed building used as a community-based residential facility, as defined in s. 500.01 (1), which serves fewer than fewer unrelated residents.

(176) "Plumbing" has the meaning specified under s. 145.01 (10), Stats.

Note: Section 145.01 (10), Stats., reads: "Plumbing" means and includes:
(a) All piping, fixtures, appliances, equipment, devices and appurtenances in connection with the water supply, water distribution and drainage systems, including hot water storage tanks, water softeners and water heaters connected to such water and drainage systems and also includes the installation thereof.
(b) The construction, connection or installation of any drain or waste piping system from the outside or proposed outside foundation walls of any building to the
mains or other sewage system terminus within bounds of, or beneath an area subject to easements for highway purposes, including private sewage systems, and the alteration of any such systems, drains or waste piping.

(c) The water service piping from the outside or proposed outside foundation walls of any building to the main or other water utility service terminal within bounds of, or beneath an area subject to easements for highway purposes and its connections.

(d) The water pressure system other than municipal systems as provided in ch. 261.

(e) A plumbing and drainage system so designed and vent piping so installed as to keep the air within the system in free circulation and movement; to prevent with a margin of safety unequal air pressures of such force as might blow, siphon or affect the discharge, or extend the discharge from plumbing fixtures, or permit sewer air to escape into the building; to prohibit cross connection, contamination or pollution of the potable water supply and distribution systems, and to provide an adequate supply of water to properly serve, cleanse and operate all fixtures, equipment, appurtenances and appliances served by the plumbing system.

(177) "Plumbing appliance" means any one of a special class of plumbing devices which is intended to perform a special function. The operation or control of the appliance may be dependent upon one or more energized components, such as motors, controls, heating elements, or pressure or temperature sensing elements. The devices may be manually adjusted or controlled by the user or operator, or may operate automatically through one or more of the following actions: a time cycle, a temperature range, a pressure range, or a measured volume or weight.

(178) "Plumbing fixture" means a receptacle or device which:

(a) Is either permanently or temporarily connected to the water distribution system of the premises, and demands a supply of water from the system;

(b) Discharges used water, waste materials, or sewage either directly or indirectly to the drain system of the premises; or

(c) Requires both a water supply connection and a discharge to the drain system of the premises.

(179) "Plumbing system" includes the water supply system, the drain system, the vent system, plumbing fixtures, plumbing appliances and plumbing appurtenances that serve a building, structure or premises.

(180) "Point of standards application" has the meaning specified under s. 160.01 (5), Stats.

Note: Section 160.01 (5) Stats., reads: "Point of standards application" means the specific location, depth or distance from a facility, activity or practice at which the concentration of a substance in groundwater is measured for purposes of determining whether a preventive action limit or an enforcement standard has been attained or exceeded.

(181) "Potable water" means water that is:

(a) Safe for drinking, personal or culinary use; and

(b) Free from impurities present in amounts sufficient to cause disease or harmful physiological effects and conforming in its bacteriological and chemical quality to the requirements specified in ch. NR 809.

(182) "POWTS" means a private onsite wastewater treatment system.

(183) "POWTS component" means any subsystem, subassembly or other system designed for use in or as part of a private onsite wastewater treatment system which may include treatment, dispersal or holding and related piping.

(184) "POWTS dispersal component" means a device or method that is intended to promote the assimilation of treated wastewater by the environment.

(185) "POWTS holding component" means any receptacle intended to collect wastewater for a period of time, including holding and dosing tanks.

(186) "POWTS treatment component" means a device or method that is intended to reduce the contaminant load of wastewater.

(187) "Prefabricated plumbing" means concealed drain piping, vent piping or water supply or a combination of these types of piping, contained in a modular building component, which will not be visible for inspection when delivered to the final site of installation.

(188) "Pressure relief valve" means a pressure actuated valve held closed by a spring or other means and designed to automatically relieve pressure at a designated pressure.

(189) "Pressure vacuum breaker assembly" means a type of cross connection control device which consists of an independently operating internally loaded check valve and an independently operating loaded air inlet located on the discharge side of the check valve, a tightly closing shut-off valve located at each end of the assembly, and test cocks.

(190) "Pressurized flushing device" means a device that uses the water supply to create a pressurized discharge to flush a fixture exclusive of gravity type flushing systems.

(191) "Preventive action limit" or "PAL" has the meaning as specified under s. 160.01 (6), Stats.

Note: Section 160.01 (6), Stats., reads: "Prevention action limits" means a numerical value expressing the concentration of a substance in groundwater which is adopted under s. 160.15, Stats., and specified under s. NR 140.10 or 140.12.

(192) "Principal residence" means a residence that is occupied at least 51% of the year by the owner. Principal residence includes a residence owned by a tenant or estate of an individual if the residence is occupied at least 51% of the year by a person who has an ownership interest in the residence as a beneficiary of the trust or estate.

(193) "Private interceptor main sewer" means a privately owned sewer serving 2 or more buildings and not directly controlled by a public authority.

(194) "Private onsite wastewater treatment system" has the meaning given for "private sewage system" under s. 145.01 (12), Stats.

Note: Section 145.01 (12), Stats., reads: "Private sewage system" means a sewage treatment and disposal system serving a single structure with a septic tank and soil absorption field located on the same parcel as the structure. This term also means an alternative sewage system approved by the department including a substitute for the septic tank or soil absorption field, a system serving more than one structure or a system located on a different parcel than the structure. A private sewage system may be owned by the property owner or by a special purpose district.

(195) "Private water main" means a privately owned water main serving 2 or more buildings and not directly controlled by a public authority.

(196) "Public" means, in the classification of plumbing fixtures, those fixtures which are available for use by the public or employees.

(197) "Public building" has the meaning specified under s. 101.01 (12), Stats.

Note: Section 101.01 (12), Stats., reads: "Public building" means any structure, including exterior parts of such building, such as a porch, exterior platform or steps, porches having means of ingress or egress, porches used in whole or in part as a place of resort, assembly, lodging, trade, traffic, occupancy, or use by the public or by 3 or more tenants. When used in relation to building codes, "public building" does not include a previously constructed building used as a community-based residential facility as defined in s. 50.01 (1g) which serves 20 or fewer unrelated residents or an adult family home, as defined in s. 50.01 (1).

(198) "Public sewer" means a sewer owned and controlled by a public authority.

(199) "Public water main" means a water supply pipe for public use owned and controlled by a public authority.

(200) "Quick closing valve" means a valve or faucet that closes automatically when released manually or controlled by mechanical means for fast action closing.

(201) "Receptor" means a fixture or device that receives the discharge from indirect or local waste piping.

(202) "Redoximorphic feature" means a feature formed in the soil matrix by the processes of reduction, translocation and oxidation of iron and manganese compounds in seasonally saturated soil.

(203) "Reduced pressure detector backflow preventer" means a type of reduced pressure principle type backflow preventer which includes a parallel flow meter to indicate leakage or unauthorized use of water downstream of the assembly.

(204) "Reduced pressure principle type backflow preventer" means a type of cross connection control device which contains
2 independently acting check valves, separated by an intermediate chamber or zone in which there is a hydraulically operated means for venting to atmosphere, and includes 2 shut-off valves and 4 test cocks.

(205) "Relief vent" means a vent which permits additional circulation of air in or between drain and vent systems.

(206) "Riser" means a water supply pipe that extends vertically one full story or more.

(207) "Roof drain" means a drain installed to receive water collecting on the surface of a roof and to discharge it into a conductor.

(208) "Roughing in" means the installation of all parts of the plumbing system which can be completed prior to the installation of fixtures including drain, water supply and vent piping and the necessary fixture supports.

(209) "Row house" has the meaning specified under s. Comm 51.01 (114a).

(210) "Safing" means a pan or other collector placed beneath a pipe or fixture to prevent leakage from escaping to the floor, ceiling or walls.

(211) "Sand interceptor" means a receptacle designed to intercept and retain sand, grit, earth and other similar solids.

(212) "Sanitary sewer" means a pipe that carries wastewater consisting in part of domestic wastewater.

(213) "Scum" means the accumulated floating solids generated during the biological, physical or chemical treatment, coagulation or sedimentation of wastewater.

(214) "Secretary" means the secretary of the department of commerce or designee.

(215) "Servicing" has the meaning as specified under s. NR 113.03 (57).

(216) "Sewage" means wastewater containing fecal coliform bacteria exceeding 200 CFU, colony forming units, per 100 ml.

(217) "Sewage grinder pump" means a type of sewage pump which macerates wastewater consisting in part of sewage.

(218) "Sewage pump" means an automatic pump for the removal of wastewater from a sanitary sump.

(219) "Slip-join" means a connection in which one pipe slips into another, the joint of which is made tight with a compression type fitting.

(220) "Sludge" means the accumulated solids generated during the biological, physical or chemical treatment, coagulation or sedimentation of water or wastewater.

(221) "Small commercial establishment" means a commercial establishment or business place with a maximum daily wastewater flow rate of less than 3,000 gallons per day as determined from the design criteria of the state plumbing code. Small commercial establishment includes a farm, including a residence on a farm, if the residence is occupied by a person who is an operator of the farm and if the maximum daily wastewater flow rate of the farm and the residence on the farm is less than 3,000 gallons per day as determined from the design criteria of the state plumbing code.

(222) "Soil" means the naturally occurring pedogenically developed and undeveloped regolith overlying bedrock.

(223) "Soil consistency" means the resistance of soil material to deformation or rupture as related to the degree of adhesion and cohesion of a soil mass.

(224) "Soil horizon" means a layer of soil material approximately parallel to the land surface and differing from adjacent genetically related layers in physical, chemical, or biologic characteristics.

(225) "Soil morphology" means the physical or structural characteristics of a soil profile particularly as related to the arrangement of soil horizons based on color, texture, structure, consistence, and porosity.

(226) "Soil profile" means a vertical section of soil containing one or more soil horizons.

(227) "Soil profile evaluation" means a determination of soil properties or characteristics as they relate to wastewater or non-waste-carried human waste treatment or disposal.

(228) "Soil structure" means the combination or arrangement of individual soil particles into definable aggregates or pods, which are characterized and classified on the basis of size, shape, and degree of distinctness.

(229) "Soil texture" means the relative proportions of sand, silt and clay (soil separates) in a soil.

(230) "Spigot" means the end of a pipe which fits into a bell or hub.

(231) "Spill level" means the horizontal plane to which water will rise to overflow through channels or connections which are not directly connected to any drainage system, when water is flowing into a fixture, vessel or receptacle at the maximum rate of flow.

(232) "Spring line, pipe" means the line or place from which the arch of a pipe or conduit rises.

(233) "Stack" means a drain or vent pipe that extends vertically one full story or more.

(234) "Stack vent" means a vent extending from the top of a drain stack.

(235) "Standpipe" means a drain pipe serving as a receptor for the discharge wastes from indirect or local waste piping.

(236) "State" means the state of Wisconsin, its agencies and institutions.

(237) "State plumbing code" means chs. Comm 81 to 87.

(238) "Sterilizer, boiling type" means a device of nonpressure type, used for boiling instruments, utensils, or other equipment for disinfecting.

(239) "Sterilizer, instrument" means a device for the sterilization of various instruments.

(240) "Sterilizer, pressure" means a pressure vessel fixture designed to use steam under pressure for sterilizing.

(241) "Sterilizer, pressure instrument washer" means a pressure vessel designed to both wash and sterilize instruments during the operating cycle of the device.

(242) "Sterilizer, utensil" means a device for the sterilization of utensils.

(243) "Sterilizer vent" means a separate pipe or stack, indirectly connected to the drain system at the lower terminal, which receives the vapors from nonpressure sterilizers, or the exhaust vapors from pressure sterilizers, and conducts the vapors directly to the outer air.

(244) "Sterilizer, water" means a device for sterilizing water and storing sterile water.

(245) "Storm sewer" means a pipe that carries storm water, surface water, groundwater and clear water wastes.

(246) "Storm water wastes" means the wastewater collected from a precipitation event.

(247) "Subsoil drain" means that part of a drain system which conveys the ground or seepage water from the footings of walls or below the basement floor under buildings to the storm sewer or other point of disposal.

(248) "Sump" means a tank or pit that receives wastewater that must be emptied by mechanical means.
(249) "Sump pump" means an automatic water pump for storm water or clear water wastes from a sump, pit or low point.

(250) "Sump vent" means a vent pipe from a nonpressurized sump.

(251) "Supports" means fangers, anchors and other devices for supporting and securing pipes or fixtures to structural members of a building.

(252) "Surface water" means those portions of Lake Michigan and Lake Superior within the boundaries of Wisconsin, all lakes, bays, rivers, streams, springs, ponds, impounding reservoirs, marshes, watercourses, drainage systems, and other surface water, natural or artificial, public or private within the state or under its jurisdiction, except those waters which are entirely confined and completely retained upon the property of a facility.

(253) "Swimming pool" means a structure, basin, chamber or tank containing an artificial body of water for swimming, diving or recreational bathing.

(254) "Temperature and pressure relief valve" means a combination relief valve designed to function as both a temperature relief and pressure relief valve.

(255) "Temperature relief valve" means a temperature actuated valve designed to automatically discharge at a designated temperature.

(256) "Tempered water" means water ranging in temperature from 85°F. to less than 110°F.

(257) "Total suspended solids" or "TSS" means solids in wastewater that can be removed readily by standard filtering procedures in a laboratory and reported as milligrams per liter (mg/L).

(258) "Toxic" means a probable human oral lethal dose of 15 or less grams of solution per kilogram of body weight.

(259) "Trap" means a fitting, device or arrangement of piping so designed and constructed as to provide, when properly vented, a liquid seal which prevents emission of sewer gases without materially affecting the flow of wastewater through it.

(260) "Trap seal" means the vertical distance between the top of the trap weir and the top of the dip separating the inlet and outlet of the trap.

(261) "Trap seal primer, water supply fed" means a type of valve designed to supply water to the trap in order to provide and maintain the water seal of the trap.

(262) "Trap weir" means that part of a trap that forms a dam over which wastes must flow to enter the drain piping.

(263) "Turf sprinkler system" means a system of piping, appurtenances and devices installed underground to distribute water for lawn or other similar irrigation purposes.

(264) "Unsaturated soil" means soil in which the pore spaces contain water at less than atmospheric pressure, as well as air and other gases.

(265) "Vacuum" means any pressure less than that exerted by the atmosphere.

(266) "Vacuum relief valve" means a device that admits air into the water distribution system to prevent excessive vacuum in a water storage tank or heater.

(267) "Vent" means a part of the plumbing system used to equalize pressures and ventilate the system.

(268) "Vent header" means a branch vent which connects 2 or more stack vents or vent stacks or both and extends to the outside air.

(269) "Vent stack" means a vertical vent pipe which extends one or more stories.

(270) "Vent system" means a pipe or pipes installed to provide a flow of air to or from a drain system, or to provide a circulation of air within the system to protect trap seals from siphonation and back pressure.

(271) "Vertical pipe" means any pipe or fitting which makes an angle of 45° or less with the vertical.

(272) "Wall hydrant, freeze resistant automatic draining type vacuum breaker" means a type of device which is designed and constructed with anti-siphon and back pressure preventive capabilities and with means for automatic post shut-off draining to prevent freezing.

(273) "Wall mounted water closet" means a water closet attached to a wall in such a way that it does not touch the floor.

(274) "Waste" means the discharge from any fixture, appliance, area or appurtenance.

(275) "Waste sink" means a receptacle for the discharge from indirect or local waste piping installed with its flood level rim above the surrounding floor.

(276) "Wastewater" means clear water wastes, storm water wastes, domestic wastewater, industrial wastewater, sewage or any combination of these.

(277) "Wastewater, treated" means the effluent conveyed through one or more POWTS treatment components to a POWTS dispersal component.

(278) "Water closet" means a water-flushed plumbing fixture designed to receive human excrement directly from the user of the fixture.

(279) "Water conditioner" means an appliance, appurtenance or device used for the purpose of ion exchange, demineralizing water or other methods of water treatment.

(280) "Water distribution system" means that portion of a water supply system from the building control valve to the connection of a fixture supply connector, plumbing fixture, plumbing appliance, water-using equipment or other piping systems to be served.

(281) "Water heater" means any heating device with piping connections to the water supply system that is intended to supply hot water for domestic or commercial purposes other than space heating.

(282) "Water service" means that portion of a water supply system from the water main or private water supply to the building control valve.

(283) "Waters of the state" has the meaning specified under s. 281.01 (18), Stats.

Notes: Section 281.01 (18), Stats., reads: "Waters of the state" means those portions of Lake Michigan and Lake Superior within the boundaries of Wisconsin, all lakes, bays, rivers, streams, springs, ponds, wells, impounding reservoirs, marshes, watercourses, drainage systems and other surface water or groundwater, natural or artificial, public or private within the state or under its jurisdiction.

(284) "Water supply system" means the piping of a private water main, water service and water distribution system, fixture supply connectors, fittings, valves, and appurtenances through which water is conveyed to points of usage such as plumbing fixtures, plumbing appliances, water using equipment or other piping systems to be served.

(285) "Water treatment device" means a device which:

(a) Renders inactive or removes microbiological, particulate, inorganic, organic or radioactive contaminants from water which passes through the device or the water supply system downstream of the device; or

(b) Injects into the water supply system gaseous, liquid or solid additives other than water, to render inactive microbiological, particulate, inorganic, organic or radioactive contaminants.

(286) "Wetland" has the meaning as specified under s. NR 322.03 (11).

Notes: Section NR 322.03 (11) reads: "Wetland" means an area where water is at, near or above the land surface long enough to be capable of supporting aquatic or hydric vegetation and which has soil indicative of wet conditions.

(287) "Wetland, constructed" means a man-made design complex of saturated substrates, emergent and submerged vegetation, and water that simulates natural wetlands for human use and benefits.
"Wet vent" means that portion of a vent pipe which receives the discharge of wastes from other than water closets, urinals or other fixtures which discharge like sewage or fecal matter.

"Yoke vent" means a vent connected to a drain stack for the purpose of preventing pressure changes in the drain stack.

History: Cr. Register, April 2000, No. 532, eff. 7-1-00.

Comm 81.20 Incorporation of standards by reference. (1) CONSENT. Pursuant to s. 227.21, Stats., the attorney general and the reviser of statutes have consented to the incorporation by reference of the standards listed in sub. (3).

(2) COPIES. Copies of the adopted standards are on file in the offices of the department, the secretary of state and the reviser of statutes. Copies of the standards may be purchased through the respective organizations listed in Tables 81.20-1 to 81.20-14.

(3) ADOPTION OF STANDARDS. The standards referenced in Tables 81.20-1 to 81.20-14 are hereby incorporated by reference into this chapter.

Subchapter VI — Installation
Comm 82.60 Pipe hangers and supports.

Note: Sections II.H.R. 82.01 to 82.25, 82.15 and 82.17 to 82.25 as they existed on February 26, 1985 were reprinted and new sections II.H.R. 82.31 to 82.36 and 82.37 were effective March 1, 1985. Chapter II.H.R. 82 was renumbered chapter Comm 82 under s. 139.93 (2m) (6) 1., Stats. and corrections made under s. 139.93 (2m) (6) 7., Stats., Register, February, 1997, No. 494.

Comm 82.01 Scope. The provisions of this chapter apply to the design, construction and installation of plumbing, including not limited to sanitary and storm drainage, water supplies, storm water and sewage disposal for buildings.

Note: Chapter Comm 83 contains provisions for the siting, design, installation, inspection and maintenance of private onsite wastewater treatment systems. Chapter Comm 84 contains provisions and standards for plumbing materials, plumbing fixtures and plumbing appliances.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85.

Comm 82.03 Application. The provisions of this chapter are not retroactive, unless specifically stated otherwise in the rule.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85.

Subchapter I — Plumbing Principles and Definitions

Comm 82.10 Basic plumbing principles. This chapter is founded upon certain basic principles of environmental sanitation and safety through properly designed, installed, and maintained plumbing systems. Some of the details of plumbing construction may vary, but the basic sanitary and safety principles desirable and necessary to protect the health of people are the same everywhere. As interpretations may be required, and as unforeseen situations arise which are not specifically addressed, the following principles shall be used to define the intent of this chapter.

1. Plumbing in all buildings, public and private, intended for human occupancy, shall be installed and maintained in such a manner so as to protect the health, safety and welfare of the public or occupants.

2. Every building intended for human occupancy shall be provided with an adequate, safe and potable water supply.

3. To fulfill the basic needs of sanitation and personal hygiene, each dwelling connected to a private onsite wastewater treatment system or public sewer shall be provided with at least the following plumbing fixtures: one water closet, one wash basin, one kitchen sink and one bathtub or shower, except a system or device recognized under ch. Comm 91 may be substituted for the water closet. All other structures for human occupancy shall be equipped with sanitary facilities in sufficient numbers as specified in chs. Comm 90 to 64.

4. Plumbing fixtures, appliances and apparatuses, whether existing or to be installed, shall be supplied with water in sufficient volume and at pressures adequate to enable them to function properly and efficiently at all times and without undue noise under normal conditions of use. Plumbing systems shall be designed and adjusted to use the minimum quantity of water consistent with proper performance and cleaning.

5. Hot or tempered water shall be supplied to all plumbing fixtures which normally require hot or tempered water for proper use and function.

6. Devices for heating water and storing it in pressure vessels or tanks shall be so designed and installed as to prevent dangers of explosion or overheating.

7. Where plumbing fixtures exist in a building which is not connected to a public sewer system, suitable provision shall be made for treating and recycling the sewage and wastewater by a method of holding or treatment and dispersal satisfactory to the department.

8. Drain systems shall be designed, constructed, and maintained to conduct the waste water or sewage quickly from the fixture to the place of disposal, with velocities which will prevent clogging, fouling and the depositing of solids, and shall have adequate cleanouts so arranged that the drain pipes may be readily cleaned.

9. The drain systems shall be designed so that there is an adequate circulation of air in all pipes and no danger of siphonage, aspiration or forcing of trap seals under conditions of ordinary use.

10. The piping of a plumbing system shall be of durable material, free from defective workmanship, and designed and constructed to give satisfactory service for its reasonable expected life.

11. Plumbing fixtures shall be made of durable, smooth, non-absorbent and corrosion resistant material, and shall be free from concealed fouling surfaces.

12. Proper protection shall be provided to prevent contamination of food, water, sterile goods and similar materials by backflow of wastewater.

13. All plumbing fixtures shall be installed to provide adequate spacing and accessibility for the intended use and for cleaning.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85; correction in (3) made under s. 139.93 (2m) (6) 7., Stats., am. (2), Register, August, 1991, No. 432, eff. 9-1-91; am. Subchapter II — Administration & Enforcement

Comm 82.20  Plan review and approval. (1) GENERAL.
Plans and specifications shall be submitted to the department or to an approved agent municipality for review in accordance with pars. (a) and (b).

(a) Department review. Plans and specifications for the types of installations listed in Table 82.20–1 shall be submitted to the department for review, regardless of where the installation is to be located. Written approval for the plans shall be obtained prior to installation of the work.

(b) Department or agent municipality review. Plumbing plans and specifications for the types of plumbing installations listed in Table 82.20–2 shall be submitted for review to an agent municipality, if the installation is to be located within the agent municipality or to the department, if the installation is not to be located within an agent municipality. A municipality shall be designated as an agent municipality in accordance with sub. (2). Written approval for the plumbing plans shall be obtained prior to installation of the plumbing.

1. Plan review and approval of one- and two-family dwellings. Review and approval of plumbing plans for one- and two-family dwellings shall be in accordance with the provisions specified in s. Comm 20.09.

2. Local review. An agent municipality may require by local ordinance the submittal and review of plumbing plans for those installations involving 10 or less plumbing fixtures.

A water heater is to be counted as a plumbing fixture.

C: For the purpose of plan submittal, public buildings do not include zero–lot–line row houses wherein each living unit is served by an individual water service and an individual building sewer. Only agent municipalities which are cities of the first class may review these types of installations.

(2) AGENT MUNICIPALITIES. The department may designate an approved municipality the authority to review and approve plumbing plans and specifications for those plumbing installations to be located within the municipality's boundary limits and which require approval under sub. (1) (b).

(a) An agent municipality shall employ at least 2 full–time plumbing inspectors who have been qualified by the department.

1. The primary duties of the plumbing inspectors shall include plumbing plan review.

2. The plumbing inspectors shall be Wisconsin licensed master or journeyman plumbers.

Note: See Appendix for listing of agent municipalities.

(b) An agent municipality may waive its jurisdiction for plan review and approval for any project, in which case plans shall be submitted to the department for review and approval.

(c) Agent municipalities may set by ordinance the fees for plan review services.

(3) PRIORITY PLAN REVIEW. An appointment may be made with the department to facilitate the examination of plans in less than the normal processing time. Complete plans along with the fee specified in s. Comm 2.61 (3), shall be submitted to the department. The plans shall comply with all of the provisions of this section.

(4) PLANS AND SPECIFICATIONS. (a) At least 2 sets of plans and one copy of specifications which are clear, legible and permanent copies shall be submitted for examination and approval.

(b) If a submitter wants more than 2 sets of approved plans returned, the fees specified in s. Comm 2.64 shall accompany the plan submittal.

(c) All plans submitted for approval shall be accompanied by sufficient data and information for the department to judge if the installation and its performance will meet the requirements of this chapter and ch. Comm 84.

1. Information to accompany the plans shall include the location or address of the installation and the name of the owner.

2. Plans proposing the installation, creation or extension of a private interceptor main sewer which is to discharge to a municipal treatment facility shall:

a. Be accompanied by a letter from the appropriate designated planning or management agency indicating conformance with an approved area–wide water quality management plan under ch. NR 121; and

b. Not be approved, if the municipality is ineligible for sanitary sewer extension approvals under s. NR 110.05.

3. Except as provided in subd. 4, plans proposing the installation of a building sewer for new construction which is to discharge to a municipal treatment facility shall:

Register, April, 2003, No. 532
a. Be accompanied by a letter from either the appropriate designated management agency or sanitary district indicating conformance with an approved areawide water quality management plan; and
b. Not be approved, if the municipality is ineligible for sanitary sewer extension approvals under s. NR 110.05.

4. Plans proposing the installation of a building sewer for new construction which is to discharge to a municipal treatment facility shall not be required to comply with subd. 3., if:
   a. The proposed installation is served by an existing building sewer which extends from the lot line to the public sewer and the proposed installation does not exceed the capacity of the existing building sewer or sewers,
   b. The plans indicate that a drainage load of not more than 54 drainage fixture units will be discharged through the building sewer.

Note: See Appendix for listing of water quality management agencies.

(d) 1. a. Except as provided in subd. 1. b., plumbing plans and specifications shall be sealed or stamped and shall be signed by a Wisconsin registered architect, engineer or plumbing designer in accordance with ch. A-E 2.

b. A master plumber may design and submit for approval plumbing plans and specifications for a plumbing system which the master plumber is to install. Each sheet of plans and specifications the master plumber submits shall be signed and dated and shall include the Wisconsin license number of the master plumber. Where more than one sheet is bound together into one volume, only the title sheet or index sheet need to be signed and dated by the master plumber responsible for their preparation, if the signed sheet clearly identifies all of the other sheets in the volume.

2. Automatic fire sprinkler plans and specifications for cross connection control shall be:
   a. Signed and sealed in accordance with s. A-E 2.02 by an architect, engineer or sprinkler designer who is registered by the department of regulation and licensing; or
   b. Signed, including license number, and dated by an automatic fire sprinkler contractor who is responsible for the installation of the sprinklers and who is licensed by the department.

(5) PLAN REVIEW. Except as provided in subd. (12), the department shall review and make a determination on an application for plan review within 15 days of receiving the required information and fees.

(a) Conditional approval. If, upon review, the department determines that the plans substantially conform to the provisions of chs. Comm 82 to 84, a conditional approval, in writing, shall be granted. All nonconforming conditions stated in the conditional approval shall be corrected before or during installation.

(b) Denial of approval. If, upon review, the department determines that the plans do not substantially conform to the provisions of chs. Comm 82 to 84, the request of conditional approval shall be denied in writing.

(6) EVIDENCE OF APPROVAL. The plumber responsible for the installation of the plumbing shall keep at the construction site at least one set of plans bearing the department’s or the agent municipality’s stamp of approval and at least one copy of specifications. The plans and specifications shall be open to inspection by an authorized representative of the department.

(7) FEES. Fees for plumbing plan review and petition for variance shall be submitted in accordance with ss. Comm 2.64 and 2.52.

(8) REVISIONS. All changes or modifications, which involve the provisions of chs. Comm 82 to 84, made to plumbing plans and specifications, which have been granted approval under sub. (1), shall be submitted to the department or agent municipality for examination. All changes and modifications shall be approved in writing by the department or agent municipality prior to installation of the plumbing.

(9) REVOCATION OF APPROVAL. The department may revoke any approval, issued under the provisions of this chapter, for any false statements or misrepresentation of facts on which the approval was based.

(10) DEPARTMENT LIMITATION AND EXPIRATION OF APPROVAL. (a) A conditional approval of a plan by the department shall not be construed as an assumption by the department of any responsibility for the design; and the department does not hold itself liable for any defects in construction, nor for any damages that may result from the specific installation.

(b) Plan approval by the department or its authorized representative shall expire 7 years after the date indicated on the approval letter, if construction has not commenced within that 2 year period.

(11) PETITION FOR VARIANCE. (a) Procedure. The department will consider and may grant a variance to an administrative rule upon receipt of a fee and a completed petition for variance form from the owner, provided an equivalency is established in the petition for variance which meets the intent of the rule being peti tioned. The department may impose specific conditions in granting a variance to promote the protection of the health, safety or welfare of the public. Violation of those conditions under which the variance is granted constitutes a violation of this chapter.

(b) Petition processing time. Except for priority petitions, the department shall review and make a determination on a petition for variance within 30 business days of receipt of all calculations, documents and fees required to complete the review. The department shall process priority petitions within 10 business days.

Note: The petition for variance form (SB 800) is available from the Safety and Buildings Division, P.O. Box 7162, Madison, WI 53707.

(12) ENGINEERED PLUMBING SYSTEMS. The provisions of this chapter or ch. Comm 84 are not intended to prevent design and use of engineered plumbing systems if the system has been first approved by the department. The department may approve an engineered plumbing system, if the system complies with the intent of chs. Comm 82 to 84.

(a) Plans and specifications. Plans and specifications for all engineered plumbing systems shall be submitted and reviewed in accordance with subs. (4) to (10).

1. The plans, specifications and all pertinent data shall indicate the nature and extent of the proposed system before an approval is granted.

2. Plans, specifications and data for an engineered plumbing system shall show the complete drain system, vent system, and water supply system including:
   a. The plumbing fixture and appliance arrangements;
   b. The pipe sizes;
   c. The direction of flow for drain pipes;
   d. The grade of horizontal drain pipes;
   e. The drainage fixture unit values for all drain pipes; and
   f. The water supply fixture unit values for all water supply pipes.

3. When requested, additional details and data pertaining to the design, installations and materials of an engineered plumbing system shall be submitted to the department.

4. The department shall review and make a determination on an application for plan review of an engineered plumbing system within 3 months of receiving the required information and fees.

(b) Inspections. The registered architect, engineer, plumbing designer or master plumber responsible for the design of the engineered plumbing system shall provide on-site supervision of the installation.

1. Upon completion of the installation, the registered architect, engineer, plumbing designer or master plumber shall certify in writing to the department that the installation is in compliance with the approved plans, specifications and data.
2. The department may require periodic inspections of the system by the registered architect, engineer, plumbing designer or master plumber after the installation is completed to monitor the performance of the system.

(13) Penalties. Penalties for violations of this chapter shall be assessed in accordance with s. 145.12, Stats.

History: Cr. Register, February, 1985, No. 350, eff. 3–1–85; am. (1) (intro.), r. and recr. Tables 82.20-1 and 82.20-2, r. (5), rem. (6) to (12) to be (9) to (11), cr. (5) (intro.), eff. 8–1–86; correction in (1) (b) 5, made under s. 13.93 (2m) (b) 7, Stats., Register, May, 1988, No. 389, am. (4) (c) 2, intro. and 4. a. and b., Register, January, 1991, No. 422, eff. 3–1–91; am. (2), cr. (a), Register, August, 1991, No. 428, eff. 9–1–91; am. (1) (intro.), (a), (d) (intro.), (c), (a) (c), (1), (5) (a), (b) and Tables 82.20-1 and 82.20-2, rem. (4) (d) and (e) to be (4) (d) 1. a. and b. and am. (4) (d) 1. a., cr. (4) (d) 2., Register, February, 1994, No. 458, eff. 3–1–94; correction in (7) made under s. 13.93 (2m) (b) 7, Stats., Register, February, 1994, No. 458; corrections made under s. 13.93 (2m) (b) 7, Stats., Register, October, 1996, No. 490; am. Tables 82.20-1, 2, (1) (b) 2., Register, February, 1997, No. 494, eff. 3–1–97; correction in (13) made under s. 13.93 (2m) (b) 7., Stats., Register, February, 2000, No. 530.

Comm 82.21 Testing and maintenance. (1) Testing of plumbing systems. Except as provided in par. (a), all new plumbing and all parts of existing systems which have been altered, extended or repaired shall be tested as specified in par. (6) to disclose leaks and defects before the plumbing is put into operation.

(a) Waiver of testing. 1. The testing of the plumbing shall not be required where the installation does not include the addition, replacement, alteration or relocation of any water distribution, drain or vent piping.
2. a. Field testing the installation of a storm building sewer and a storm private interceptor main sewer is not required.
b. The joints and connections to be employed for storm building sewer piping shall conform with s. Comm 84.40 (1) (a).

(b) Local inspection. Where the plumbing is installed in a municipality having a local inspector, the testing of the plumbing shall be done in the presence of a plumbing inspector, except as provided in subd. 1. b.

1. Notice of inspection. a. The plumber responsible for the installation shall notify the plumbing inspector in person, by telephone or in writing when the work is ready for inspection.
b. If the inspection is not made by the end of the normal business day following the day of notification, not including Saturday, Sunday or legal holidays, the plumber may proceed with the testing and the installation.
2. Preparations for inspection. When the installation is ready for inspection, the plumber shall make such arrangements as will enable the plumbing inspector to inspect all parts of the plumbing system. The plumber shall have present the proper apparatus and appliances for making the tests, and shall furnish such assistance as may be necessary in making the inspection.
3. Rough-in inspection. A rough-in inspection shall be made when the plumbing system is roughed-in and before fixtures are set. Except as provided in subd. 1., plumbing work shall not be closed in, concealed, or covered until it has been inspected and approved by the plumbing inspector and permission is granted to do so.
4. Final inspection. a. Upon completion of the plumbing installation and before final approval is given, the plumbing inspector shall inspect the work.
b. When required by a municipality, the plumbing installation shall be subject to a final test conducted in accordance with par. (d) 7. The final test shall be observed by the plumbing inspector.
5. Reinspections. Whenever the plumbing official finds that the work or installation does not pass any initial test or inspection, the necessary corrections shall be made to comply with this chapter. The work or installation shall then be resubmitted for inspection to the plumbing inspector.

(c) Inspection of one- and two-family dwellings. The inspection of plumbing installations for one- and two-family dwellings shall be in accordance with s. Comm 20.08 to 20.11.

(d) Testing provisions. 1. General. The testing of plumbing installations shall be conducted in accordance with this paragraph.
a. Equipment, material and labor for tests. All equipment, material and labor required for testing a plumbing system or part thereof shall be furnished by the plumber responsible for the installation.
b. Exposure of work. Except as provided in subds. 2. and 3., all new, altered, extended or replaced plumbing shall be left uncovered and unsealed until it has been tested. Where the work has been covered or concealed before it is tested, it shall be exposed for testing.
2. Sanitary building sewer and sanitary private interceptor main sewer. A sanitary building sewer and a sanitary private interceptor main sewer shall be tested for leaks and defects with water not air before or after being covered in accordance with either subd. 2. a. or b. The test for leaks and defects may be applied to the entire building sewer or private interceptor main sewer or in sections.
For the purposes of this subdivision, the testing of a building sewer or private interceptor main sewer is not required to include the manholes serving the sewer.
a. The building sewer or private interceptor main sewer shall be tested by insertion of a test plug at the point of connection with the public sewer. The sewer shall then be filled with water under a head of not less than 10 feet. The water level at the top of the test head of water shall not drop for at least 15 minutes.
b. The air test shall be made by attaching an air compressor testing apparatus to any suitable opening, and, after closing all other inlets and outlets to the system, forcing air into the system until there is a uniform gauge pressure of 3 pounds per square inch. This pressure shall be held without introduction of additional air for a period of at least 15 minutes.
3. Building drain. The entire building drain with all its branches, receptacles and connections shall be brought so far as practical to the surface or grade of the basement floor and shall be tested with water or air in accordance with subd. 7.
4. Drain and vent systems. The piping of a drain and vent system, including conductors, shall be tested upon completion of the rough piping installation with water or air in accordance with subd. 7.
5. Private water mains and water services. Private water mains and water services shall be inspected before being covered. The private water mains and water services shall be tested and proven water tight under water pressure not less than the working pressure under which it is to be used. The water used for testing shall be obtained from a potable source of supply.
6. Water distribution system. The piping of a water distribution system shall be tested and proved water tight under a water pressure not less than the working pressure under which it is to be used. The water used for tests shall be obtained from a potable source of supply.
7. Test methods for drain and vent systems. A test for watertightness shall be applied to the entire drain and vent system at time or to the entire system in sections after the rough piping has been installed in accordance with either subd. 7. a. or b.
a. If applied to the entire system, all openings in the piping shall be tightly closed, except the highest opening, and the system shall be filled with water to the point of overflow. If the system is tested in sections, each opening shall be tightly plugged except the highest opening of the section under test, and each section shall be filled with water, but a section shall not be tested with less than a 10 foot head of water. In testing successive sections, at least the upper 10 feet of the next preceding section shall be tested, so that no joint or pipe in the building, except the uppermost 10 feet of the system, is subjected to a test of less than a 10 foot head of water. The water shall be kept in the system or in the portion under test for at least 15 minutes before inspection starts. The system shall then be tight at all points.
b. The air test shall be made by attaching an air compressor testing apparatus to any suitable opening, and, after closing all other inlets and outlets to the system, forcing air into the system until there is a uniform gauge pressure of 5 pounds per square inch or sufficient to balance a column of mercury 10 inches in height. This pressure shall be held without introduction of additional air for a period of at least 15 minutes.

5. Final test. Where required by the local plumbing inspector, after the plumbing fixtures have been installed and the traps filled with water, the connections shall be tested and proved gas and watertight by either one of the methods specified in subd. 8. a. or b.

a. The smoke test shall be made by introducing a putrid, thick smoke, produced by one or more smoke machines, into the completed system. When the smoke appears at stack openings on the roof, the openings shall be closed and a pressure equivalent to a one inch water column shall be built and maintained for the period of the inspection.

b. The air test shall be made by attaching an air compressor testing apparatus to any suitable opening, and, after closing all other inlets and outlets to the completed system, forcing air into the system until a pressure equivalent to the gauge pressure of a one inch water column. This shall be accomplished by the use of the pressure shall remain constant for the period of inspection without the introduction of additional air.

(2) MAINTENANCE AND REPAIRS. All plumbing systems, both existing and new, and all parts thereof, shall be maintained in a safe and sanitary condition. All devices or safeguards which are required by this chapter shall be maintained in good working order. The owner shall be responsible for the maintenance of plumbing systems.

(a) Existing systems. Wherever it appears upon inspection that any part of an existing plumbing system is defective, or fails to conform to the requirements of this chapter and if failure tends to create a health hazard, it shall be repaired, renovated, replaced or removed.

(b) Fixtures replaced. When an old or defective fixture is removed, to be replaced by a new fixture, and no other fixture or piping is to be added or remedied, it is not necessary to reconstruct the drain or vent piping to make it conform to the provisions of this chapter, unless the drain or vent piping is in a defective condition. Where the existing drain or vent piping does not conform to the provisions of this chapter, the department may require the new fixtures to be provided with deep seal traps.

(c) Reconstruction. When old or defective plumbing is to be remedied, additional fixtures installed, or the whole plumbing system moved to another part of the building, the remedied system shall be made to conform to this chapter.

(d) Materials reused. All plumbing fixtures, drain and vent pipes removed from a building, if found to be in good condition, may be reused, if the fixtures and pipes are approved by the department or local plumbing inspector and the owner of the building in which they are to be installed gives written consent.

(e) Existing building sewers and drains. Existing building sewers and drains may be used in connection with new buildings only if they are found on examination and test to conform to the requirements of this chapter governing building sewers and drains. If the existing work is found defective, the local or state inspector shall notify the owner of the changes necessary to make it conform to the requirements of this chapter.

(f) Repairs. All repairs to fixtures or piping shall be done in conformance with the provisions of this chapter, except repair clamps or bands may be used for emergency situations.

(g) Demolition of structures. When a structure is demolished or removed, all sanitary sewer, storm sewer and water supply connections shall be sealed and plugged in a safe manner.

(h) Dead ends. If a dead end is created in the removal of any part of a drain system, all openings in the drain system shall be properly sealed.

(3) MAINTENANCE AND TESTING OF CROSS CONNECTION CONTROL DEVICES. (a) All cross connection control devices shall be maintained in accordance with the appropriate standard.

(b) 1. A performance test shall be conducted for a reduced pressure principle backflow preventer, a reduced pressure detector backflow preventer, a double check backflow prevention assembly, a double check detector assembly backflow preventer, a pressure vacuum breaker assembly and a back siphonage backflow vacuum breaker:

a. At the time of installation;

b. Immediately after repairs or alterations to the device have occurred; and

c. At least annually.

2. a. The performance test for a reduced pressure principle backflow preventer shall be conducted in accordance with ASSE 5010–1013–1.

b. The performance test for a reduced pressure detector backflow preventer shall be conducted in accordance with ASSE 5010–1047–1.

d. The performance test for a double check detector assembly backflow preventer shall be conducted in accordance with ASSE 5010–1048–1, 5010–1048–2, 5010–1048–3 or 5010–1048–4.

e. The performance test for a pressure vacuum breaker assembly shall be conducted in accordance with ASSE 5010–1020–1.

3. A performance test for a reduced pressure principle backflow preventer, a reduced pressure detector backflow preventer, a double check backflow prevention assembly, a double check detector assembly backflow preventer, a pressure vacuum breaker assembly and a back siphonage backflow vacuum breaker shall be conducted by an individual registered by the department in accordance with s. Comm 5.99.

4. a. The results of a performance test for a reduced pressure principle backflow preventer, a reduced pressure detector backflow preventer, pressure vacuum breaker assembly, and back siphonage backflow vacuum breaker, shall be forwarded to the department within 60 days of completion of the test.

b. The results of performance tests for a reduced pressure principle backflow preventer, a reduced pressure detector backflow preventer, pressure vacuum breaker assembly, and back siphonage backflow vacuum breaker, shall be recorded in a format prescribed by the department.

Note: The form for reporting the test results (STD-927) is available from, and the test results are to be sent to, the Safety and Buildings Division, P. O. Box 7999, Madison, WI 53797.

5. The results of performance tests for a double check backflow prevention assembly, and a double check detector assembly backflow preventer, shall be maintained at the site where the devices are installed and shall be made available upon request to the department or government entity exercising jurisdiction.

(c) The maintenance and performance testing requirements of this subsection shall also apply to those cross connection control devices installed prior to the effective date of this subsection.

Subchapter III — Drain and Vent Systems

Comm 82.30 Sanitary drain systems. (1) SCOPE. The provisions of this section set forth the requirements for the design
and installation of sanitary drain systems, including building drains and building sewers.

Note: The provisions for storm and clear water drain systems are specified in s. Comm 82.36.

(2) MATERIALS. All sanitary drain systems shall be constructed of approved materials in accordance with ch. Comm 84.

(3) LOAD ON DRAIN PIPING. (a) Intermittent flow fixtures. The load factor on drain piping shall be computed in terms of drain fixture unit values specified in Table 82.30–1 for the corresponding fixture listed. Drainage fixture unit values for intermittent flow fixtures not listed in Table 82.30–1 shall be computed on the basis of one fixture unit equaling 7.5 gallons per minute of flow.

(b) Continuous flow devices. Drainage fixture unit values for continuous or semicontinuous flow devices such as pumps, ejectors, air conditioning equipment or similar devices shall be computed on the basis of the one fixture unit for each 2 gallons per minute of flow rate of discharge into the drain system.

*Based on discharge rate of the fixture.
*Includes foot, sink and infant bats and regular bathtubs with or without showers or whirlpool circulation piping.
*Based on discharge rates and number of outlets; a 4-inch diameter trap and drain pipe minimum recommended.
*Trap size corresponds to the size of the floor drain.
*Trap size corresponds to the size of the drain outlet.
*Trap size specified in referenced standards of s. Comm 84.20.

(4) SIZE OF DRAIN PIPING. (a) Maximum loading. 1. The total drainage load in any portion of drain piping shall not exceed the limits specified in Tables 82.30–2 and 82.30–3. 2. The drainage fixture unit values assigned to a receptor which is to receive only the indirect waste discharge from a relief valve on a domestic water heater may be disregarded when deter-
mining the minimum size of the building drain and building sewer. Any drain piping between the receptor and the building drain shall be sized by including the assigned fixture unit values for the type of receptor. 

Note: See Comm 82.31 (17) for sizing requirements of combination drain and vent systems.

Note: See Appendix for further explanatory material.

(b) Minimum size of underground drain piping. Any pipe of the drain system installed underground, other than the building sewer, shall not be less than 2 inches in diameter. Any portion of underground drain piping which is 2 inches in diameter shall not exceed a length of 20 feet.

<sup>a</sup> Private interceptor main sewers 6 inches or less in diameter, see s. NR 110.13 for private interceptor main sewers 8 inches or larger in diameter.

<sup>b</sup> NP means Not Permitted.

<sup>c</sup> Not more than 2 water closets or similar flush action type fixtures of 4 or more drainage fixture units.

(c) Minimum size of building sewers. 1. Gravity flow sewers. The minimum size of a gravity flow sanitary building sewer shall be 4 inches in diameter. A municipality or sanitary district by ordinance may require that portion of the building sewer between the lot line and the public sewer to be larger than 4 inches in diameter.

2. Pressurized sewers. a. Sewers pressurized through the use of sewage ejectors, sewage pumps or sewage grinder pumps shall be sized to maintain a minimum flow velocity of 2 feet per second and shall be in accordance with the ejector or pump manufacturer's recommendations.

b. Pressurized building sewers shall be sized not less than 2 inches in diameter for sewage ejectors and sewage pumps, and 1 1/4 inches in diameter for all sewage grinder pumps.

(d) Minimum size of private interceptor main sewers. 1. Except as provided in subd. 3., the minimum size of a gravity flow private interceptor main sewer shall be 4 inches in diameter.

2. Except as provided in subd. 3., the minimum size of pressurized private interceptor main sewer shall be such as to maintain a minimum flow velocity of 2 feet per second.
3. A municipality or a sanitary district may by ordinance, require the minimum size of a private interceptor main sewer to be larger than 4 inches in diameter.
4. Private interceptor main sewers 6 inches or less in diameter may not exceed the drainage fixture limits in Table 82.30-3.
5. Private interceptor main sewers 8 inches or larger in diameter shall conform with the design flow criteria specified in ch. NR 110.

(e) Future fixtures. Where provisions are made for the future installation of fixtures, the drainage fixture unit values of such fixtures shall be considered in determining the required sizes of drain and vent pipes. Construction to provide for future installations shall be terminated with a plugged fitting or fittings.

(5) Pitch of horizontal drain piping. All horizontal drain piping 4 inches or larger in diameter shall be installed at a pitch which produces a computed velocity of at least 2 feet per second when flowing half full.

(a) Horizontal branch drains. 1. The minimum pitch of horizontal branch drains 2 inches or less in diameter shall be 1/4 inch per foot.
2. The minimum pitch of horizontal branch drains larger than 2 inches in diameter shall be 1/8 inch per foot.

(b) Building drains and building sewers. 1. The minimum pitch of building drains shall be in accordance with Table 82.30-3.
2. a. The minimum pitch of building sewers 10 inches or less in diameter shall be in accordance with Table 82.30-3.
b. The minimum pitch of building sewers 12 inches or larger in diameter shall conform with the minimum pitches specified for municipal sewers in s. NR 110.13 (2) (c).

(c) Private interceptor main sewers. 1. The minimum pitch of private interceptor main sewers 6 inches or less in diameter shall be in accordance with Table 82.30-3.
2. The minimum pitch of private interceptor main sewers 8 inches or larger in diameter shall conform with the minimum pitches specified for municipal sewers in s. NR 110.13 (2) (c).

(6) Offsets in vertical drains. Offsets in vertical drain piping shall be in accordance with this subsection.

(a) Offsets of 45° or less. 1. An offset in a vertical drain, with a change in direction of 45° or less from the vertical, shall be sized as a vertical drain piping in accordance with sub. (4).
2. Where a horizontal branch connects to a stack within 2 feet above or below an offset with a change of direction of 30° to 45° from the vertical and the offset is located below 2 or more branch intervals, a relief vent shall be installed in accordance with s. Comm 82.31 (5).

(b) Offsets of more than 45°. A drain stack with an offset of more than 45° from the vertical shall be sized in accordance with sub. (4).
1. That portion of the stack above the highest offset fitting shall be sized as for vertical drain piping in accordance with sub. (4).
2. That portion of the offset between and including the offset fittings shall be sized as horizontal drain piping in accordance with sub. (4).
3. That portion of stack below the offset shall be not less than the size of the offset and not less than the size required for vertical drain piping in accordance with sub. (4).
4. No horizontal branch drain may connect to the stack offset downstream from the offset's highest fitting within the distance equal to 10 pipe diameters of the offset.
5. Where an offset is located below 2 or more branch intervals, a relief vent and a yoke vent shall be installed in accordance with s. Comm 82.31 (5).

Note: See Appendix for further explanatory material.

(7) Horizontal branch drain connection at base of a stack. (a) A horizontal branch drain may not connect downstream from the base fitting or a drain stack 2 inches or larger in diameter within the distance equal to 10 pipe diameters of the drain to which the horizontal branch drain connects.
(b) A building drain branch or building subdrain branch may not connect to a building drain or building subdrain downstream from the base fitting of a drain stack 2 inches or larger in diameter within the distance equal to 20 pipe diameters of the building drain or building subdrain.

Note: See Appendix for further explanatory material.

(8) Piping changes in direction. Changes in the direction of drain piping shall be accomplished in accordance with the requirements of this subsection.

(a) Fittings. All changes in direction of flow in drain piping shall be made by the appropriate use of 45 degree wyes, long or short sweep quarter bends, sixth, eighth, or sixteenth bends, or by a combination of these or other equivalent fittings. Except as provided in subs. 1. to 3., fittings which change the direction of flow for drain piping 8 inches or less in diameter shall conform to the minimum radii specified in Table 82.30-4.

Note: See Appendix for further explanatory material.

1. The minimum radius for the first 90° fitting downstream from a trap serving a lavatory or sink shall be 1–3/4 inches for drain piping 1–1/2 inches in diameter. The fitting shall be a tee or quarter bend.
2. The minimum radius for the first 90° bend or elbow downstream from a water closet shall be 2–1/2 inches for drain piping 3 inches in diameter.
3. The minimum radius for the first 90° bend or elbow downstream from a water closet shall be 3 inches for drain piping 4 inches in diameter.

(b) Blowout type fixtures. Where blowout type fixtures are installed back to back, appropriate fittings shall be installed to prevent the passage of wastes from one fixture to the other.

(9) Drain fittings and connections. Drain fittings, connections, devices and methods of installation shall not obstruct or retard the flow of water, wastes, sewage or air in the drain system or venting system in an amount greater than the normal frictional resistance to flow, unless as otherwise permitted in this chapter or unless approved by the department.

(a) Closet bend. The reduction of a 4 x 3 inch closet bend or collar fitting from 4 inches to 3 inches shall not be considered an obstruction.
(b) Side inlet tees or bends. The side inlet of a low pattern or high pattern tee or bend shall not be used as a vent connection when the side inlet is placed in a horizontal position or when any arrangement of piping or fittings produces a similar effect.

Note: See Appendix for further explanatory material.

(c) Prohibited fittings and connections. The types of fittings and connections specified in subs. 1. to 4. shall not be used for drain piping:
1. A heel inlet bend when the heel inlet is in the horizontal position;
2. A fitting or connection which has an enlargement chamber or recess with a ledge or shoulder, or reduction in pipe area in the direction of flow;
3. A fitting which has running threads; and
4. A connection by means of drilling and tapping of a drain or vent pipe, unless otherwise approved by the department.

(d) Saddles. If a pipe saddle is used to connect drain piping together, the saddle shall be installed in accordance with s. Comm 84.30 (5) (d).

(10) Sumps, ejectors and pumps. (a) Sumps. 1. General. All sanitary building subsurface drainage systems shall discharge into an approved, vented sump with an air or eustatic cover. The sump shall be so located as to receive the sewage by gravity flow, and shall be located at least 25 feet from any water well.

2. Capacity. The minimum capacity of the sump shall be determined in accordance with the provisions of subd. 2. a. to c.
   a. The water supply fixture unit method shall be used to determine peak input flow in gallons per minute; only the fixtures that drain to the sump shall be included.
   b. The capacity of the sump shall be such that the pump when actuated by the lowest "pump on" switch runs at least 20 seconds.

3. Discharge connections. a. The discharge pipe from the ejector or pump shall be connected to the gravity drain by means of a wye pattern fitting. Where the fitting connects to a horizontal drain, the bottom of the wye branch of the fitting shall be located above the horizontal center line.

b. A full flow check valve shall be installed in the discharge piping from each ejector or pump.

c. Where duplicate ejector or pumping equipment is installed, each discharge pipe from an ejector or pump shall be provided with a gate or ball type valve installed downstream of each full flow check valve.

5. Discharge pipe air relief. Air relief valves shall be provided at all high points in the discharge piping of an ejector or pump where the piping arrangement creates an air trap.

6. Prohibited connections. No fixtures may be connected to the discharge pipe between the ejector or pump and the point where it enters the gravity drain.

7. Maintenance. All ejectors, pumps and like appliances shall receive care as needed to keep them in a satisfactory operating condition.

(11) Building drains and building sewers. (a) Limitations. No building sewer may pass through or under a building to serve another building, unless:
1. The building sewer serves farm buildings or farm houses, or both, which are all located on one property;
2. A petition for variance is granted under s. Comm 82.20 (11). The approval or nonapproval of a petition for variance request relative to this paragraph shall be determined on an individual basis. The request shall be evaluated on site specific factors including, at least, whether:
   a. The building sewer serves buildings which are located on one property;
   b. The functions or operations of the buildings to be served by the building sewer are related; or
   c. A document, which indicates the piping and distribution arrangement for the property and buildings, will be recorded with the register of deeds.

(b) Building drains. 1. Elevation. a. All building drains shall be installed below the lowest floor levels on which fixtures may be installed if the public sewer, septic tank or private interceptor main sewer elevation permits.

b. Where any portion of an above-ground building drainage system discharges to a vertical pipe, the building drain shall connect to the building sewer at an elevation at least 30 inches above the basement floor.

Note: See Appendix for further explanatory material.

2. Backwater protection. A building drain subject to backflow or backwater shall be protected with a backwater valve or with a sump with pumping equipment in accordance with sub. (10).

a. Backwater valves, when fully open, shall have a capacity not less than that of the pipes in which installed.

b. Backwater valves shall be so located as to be readily accessible for cleaning.

3. Floor drain required. Where a plumbing fixture or appliance is located on a floor which is entirely below grade, a floor drain shall be installed to serve that floor.

(c) Building sewers. 1. Minimum depth. a. The top of a building sewer shall be located at a depth of not less than 42 inches below finished grade, except as provided in subd. 1. b. or subd. 2.
b. The top of a building sewer which discharges to a septic tank, holding tank or grease interceptor shall be located at a depth of not less than 18 inches below finished grade.

2. Protection from frost. a. Except as provided in subd. 2. c. and d., a building sewer shall be protected from frost in accordance with subd. 3. in areas where the top of the building sewer is located less than 60 inches below a surface area from which snow will be cleared.

b. Except as provided in subd. 2. c. and d., a building sewer shall be protected from frost in accordance with subd. 3. in areas where the top of the building sewer is located less than 42 inches below a surface which snow will not be cleared.

c. Where a building sewer discharges to a septic tank, holding tank, or grease interceptor, the portion of a building sewer which is within 30 feet from the connecting building drain and which is under a surface area from which snow will not be cleared shall not be required to be protected from frost.

d. Frost protection for a building sewer shall not be required where the predicted depth of frost as determined from Figure 82.30–1 and Table 82.30–6 does not extend below the top of the building sewer.

3. Insulations for building sewers. Where required by subd. 2. a. or b., building sewer insulation for frost protection shall be provided in accordance with one of the methods specified in subd. 3. a. to c.

a. Extruded polystyrene foam insulation shall be installed at a depth of at least 18 inches below finished grade and at least 6 inches above the top of the sewer pipe. The minimum thickness and width of the foam insulation shall be determined from Figure 82.30–1 and Tables 82.30–5 to 82.30–7. If the insulation is to be installed more than 6 inches above the top of the sewer, the number of inches exceeding 6 inches shall be added to the width of insulation determined from Table 82.30–7.

b. Lightweight insulating concrete shall be installed to the depth of the spring line of the sewer and shall extend laterally at least 6 inches on both sides of the sewer. The minimum thickness of the insulating concrete shall be determined from Figure 82.30-1 and Table 82.30-5. The thickness shall be measured from the top of the sewer. The top of the insulation shall be installed at least 12 inches below finished grade.

c. Alternative methods of frost protection shall be approved by the department.

(d) Location limitations. Building drains and building sewers shall be separated from water wells by the following minimum distances:

1. Eight feet for building drains and building sewers of cast iron pipe;
2. Eight feet for building drains and building sewers of plastic pipe;
3. Twenty-five feet for building drains and building sewers of all other materials; and
4. Twenty-five feet for all pressurized building drains and building sewers.

Note: See CSM 82.40 for provisions regarding the separation of water supply piping and building sewer piping.

(e) Installation of building drains and building sewers. 1. Trenching. All excavations for building drains and building sewers shall be open trench work, unless otherwise permitted by local ordinance or accepted by the local inspector.

2. Stable bottom. Where the bottom of the trench can be maintained in a stable condition and free of water during the time of installation the building drain and the building sewer shall be bedded and initially backfilled as specified in this subdivision. Grade, as used in this subdivision, shall mean the elevation of the bottom of the building drain or the building sewer.

a. Except where sand is encountered, the trench bottom throughout its length shall be excavated to a depth at least 3 inches below the grade elevation and shall be brought back to grade with sand, pea gravel, or a graded stone bedding. The bedding material shall be of a size that all the material shall pass a 1/4 inch sieve. When sand is used as a bedding material it shall not contain excessive moisture and the bedding in the entire trench width shall be hand or mechanically tamped to compact it to a minimum of 90% Standard Proctor Density. All bedding shall be shaped to accommodate pipe bells or couplings. Initial backfill on the sides of the pipe and to a depth of 12 inches over the pipe shall be sand, gravel, crushed stone or excavated material which is neither corrosive nor organic in nature. A concrete floor may be placed over a building drain having less than 3 inches of initial backfill. Initial backfill material shall be of a size that all the material shall pass a one inch sieve. Initial backfill material shall be placed in increments not exceeding 6 inches in depth and shall be well tamped for the full width of the trench and for the full length of the sewer.

b. Where the trench bottom does not contain stone larger than one inch in size or where bedrock is not encountered, the trench may be excavated to grade. Where stone larger than one inch in size or when bedrock is encountered, the trench shall be excavated to a depth at least 3 inches below the grade elevation and shall be brought back to grade with a bedding of sand, gravel, or crushed stone which shall be of a size that all the material shall pass a 1/4 inch sieve. The bedding material shall be shaped to accommodate the pipe bells or couplings. Initial backfill on the sides of the pipe and to a depth of 3 inches over the pipe shall be sand, gravel, or crushed stone which shall be of a size that all the material shall pass a one inch sieve. Initial backfill material shall be placed in increments not exceeding 6 inches in depth and shall be well tamped. Gravelly Sand

3. Unstable bottom. Where a mucky or unstable bottom is encountered in the trench, the required dry and stable foundation conditions shall be provided by sheathing driven and left in place to a depth of 48 inches below the trench bottom or to solid foundation at a lesser depth, the removal of wet and yielding material to a depth of 24 inches or to solid material, and replacement of the unstable material with limestone screenings, pea gravel or equivalent material for the bedding under the pipe. The trench bedding shall be shaped to accommodate pipe bells or couplings. In lieu of the foregoing, the required dry and stable foundation conditions may be provided by installation of a longitudinally reinforced concrete cradle the width of the trench and at least 3 inches thick or by installation of a longitudinally reinforced concrete slab the width of the trench at least 3 inches thick and bedding material as provided for in subd. 2. Initial backfill material and its placement shall conform to that specified in subd. 2. All sheathing shall be cut off at a depth of 3 feet or more below the ground surface to prevent heaving due to frost action.

4. Backfill completion. Care shall be exercised in placing the balance of the backfill to prevent breakage of the pipe. Large boulders or rock, concrete slabs, or frozen masses shall not be used in the backfill. At least 36 inches of backfill cover shall be provided over the top of the pipe before the pipe trench is wheel-loaded.

NR means Not Required.

5. Pipe openings protected. The ends of all pipes not immediately connected shall be closed so as to prevent the introduction of earth or drainage from an excavation.

(f) Connection to public sewer. The connections of building sewers to public sewers shall be in accordance with conditions of approval for the public sewer granted by the department of natural resources under s. 281.41, Stats.

1. Gravity public sewer. When a building sewer connection to the public sewer is not found within 3 feet of the point designated by the local governing body or its authorized representative, the connection shall be made in accordance with one of the provisions specified in subd. 1. a. to d.

a. A saddle fitting approved by the department and acceptable to the municipality or sanitary district shall be installed.

b. Where acceptable to the municipality or sanitary district a portion of the main sewer may be removed and a tee or wye fitting approved by the department may be inserted with compression joints in the public sewer acceptable to the municipality or the sanitary district. The insertion shall be made under the supervision of the authorized representative of the municipality or the sanitary district.

c. When the public sewer is concrete or clay, the end of the connecting sewer may be set upon or in an opening cut into the top half of the public sewer, but shall not protrude into the public sewer. The connection shall be secured by encasing the main sewer pipe and the connection in concrete at least 3 inches thick so as to assure permanency of the connection and adequate backing of the public sewer pipe.

d. In lieu of the use of a fitting and in the event that an opening cannot be located in the top half of the public sewer, a length of concrete or clay public sewer pipe may be removed and a section with a wye fitting shall be inserted in its place. The joints at the ends of the section shall be encased in concrete at least 3 inches thick. The connection or insertion shall be made under the supervision of the authorized representative of the municipality or the sanitary district.

2. Pressurized public sewer. Where a forced building sewer discharges to a pressurized public sewer, a full flow corporation cock, full flow curb stop, check valve and dresser type coupling shall be installed. The curb stop, check valve and dresser type coupling shall be installed on the property as close as possible to the connection to the common forced main sewer. The check valve and dresser type coupling shall be accessible.

(g) Prohibited installations. 1. Harmful discharge. No person may connect to a public sewer any building drain or building sewer through which is discharged any substance likely to cause undue corrosion, obstruction, nuisance, explosion or interference with sewage treatment processes.

2. Storm and clear water connections. Except as provided in s. Comm 82.36 (1) (b) 4., storm drain piping and clear water drain piping may not discharge to a sanitary building drain which connects to a publicly owned treatment works.

Note: See s. Comm 82.36 for provisions relative to storm sewers.

(12) PRIVATE INTERCEPTOR MAIN SEWERS. (a) The connection of a private interceptor main sewer to a public sewer shall be in accordance with the conditions of approval for the public sewer granted by the department of natural resources under s. 281.41, Stats.

(b) Private interceptor main sewers which discharge to a municipal treatment facility shall be designed in accordance with the appropriate water quality management plan.

(c) All private interceptor main sewers shall be tested in accordance with s. Comm 82.21.

(d) Private interceptor main sewers 6 inches or less in diameter shall be installed in accordance with the criteria for building sewers specified in sub. (11) (b) and (c) and (d) and (e).

(e) Private interceptor main sewers 8 inches or larger in diameter shall be:

1. Provided with frost protection in accordance with sub. (11) (c); and

2. Installed in accordance with the municipal sewer criteria specified in s. NR 110.13.

(f) No private interceptor main sewer may pass through or under a building to serve another building, unless:

1. The private interceptor main sewer serves farm buildings or farm houses or both which are all located on one property; or

2. A petition for variance is granted under s. Comm 82.20 (11). The approval or nonapproval of a petition for variance request relative to this paragraph shall be determined on an indi-
individual basis and shall be evaluated on site specific conditions including, at least whether:

a. The private interceptor main sewer serves only buildings which are all located on one property;

b. The functions or operations of the buildings to be served by the interceptor main sewer are related;

c. A document, which indicates the piping and distribution arrangement for the property and buildings, will be recorded with the register of deeds.

(13) LOCATION OF DRAIN PIPING. (a) Drain piping located below the ceilings of areas where food, ice or potable liquids are prepared, handled, stored or displayed shall be installed with the least number of joints and shall be installed in accordance with subds. 1. to 5.

1. All pipe openings through floors shall be provided with sleeves bonded to the floor construction and protruding not less than one inch above the top of the finish floor with the space between sleeve and the piping sealed.

2. Plumbing fixtures, except bathtubs and showers, shall be of the wall mounted type. Bathtubs shall have waste and overflow connections made above the floor and piped to a trap below the floor.

3. Floor and shower drains installed shall be equipped with integral seepage pans.

4. Cleanouts for piping shall be extended through the floor construction above.

5. Piping subject to operation at temperatures that will form condensation on the exterior of the pipe shall be thermally insulated.

(b) Where drain piping is located in ceilings of areas where food, ice or potable liquids are prepared, handled, stored or displayed, the ceilings shall be of the removable type, or shall be provided with access panels in order to provide an access for inspection of the piping.

(c) Exposed drain piping shall not be located over a pool, surge tank or open filter for a pool.

History: Cr. Register, February, 1975, No. 750, eff. 3–1–85; am. Register 1985, No. 406, eff. 5–1–88; R.C. 413.20, 413.30, 413.31, 1989, No. 461, eff. 3–1–89; R.C. 413.20, 413.30, 1993, No. 145, eff. 3–1–89; R.C. 413.20, 413.30, 413.31, 1995, No. 473, eff. 3–1–90; R.C. 413.20, 413.30, 413.31, 1997, No. 13, eff. 3–1–90; R.C. 413.20, 413.30, 413.31, 1998, No. 103, eff. 3–1–90.

Comm 82.31 Vents and venting systems. (1) SCOPE. The provisions of this section set forth the requirements for the design and the installation of vents and venting systems.

(2) MATERIALS. All vents and venting systems shall be constructed of approved materials in accordance with ch. Comm 84.

(3) GENERAL. (a) Vents. Every trap and trapped plumbing fixture shall be provided with an individual vent, except as otherwise permitted in this chapter. Vents and venting systems shall be designed and installed so that water seal of a trap shall be subject to a maximum pneumatic pressure differential equal to one inch of water column.

(b) Main stack. Each gravity-flow sanitary building sewer shall be served by at least one stack which extends from a building drain to a vent terminal or vent header. The stack shall be not less than 3 inches in diameter from the building drain to the vent terminal or vent header.

(4) VENT STACKS AND STACK VENTS. (a) Where required. Where individual vents, relief vents, or other branch vents are required, a vent stack and a stack vent shall be installed to serve all drain stacks of 2 or more branch intervals.

(b) Installation. 1. The connection of the vent stack to a drain stack shall be at or below the lowest branch drain connection to the drain stack. The connection to the drain stack shall be by means of a wye pattern fitting installed in a vertical portion of the stack.

2. A vent stack and a stack vent shall:

a. Extend to a vent terminal in accordance with sub. (16);

b. Connect to a vent stack which extends to a vent terminal;

or

c. Connect to a stack vent at least 6 inches above the fluid level rim of the highest fixture discharging into a drain stack.

3. Vent stacks and stack vents may connect into a common vent header and then shall extend to a vent terminal.

4. The connection of a vent stack with another vent may not be less than 38 inches above the next higher floor level where the plumbing fixtures are vented, but in no case lower than 2 inches above the elevation of the highest floor level rim of any fixture served by the vent.

Note: See Appendix for further explanatory material.

(5) RELIEF AND YOKE VENTS FOR STACK OFFSETS. (a) Offsets of 30 to 45°. Where a horizontal branch drain connects to a drain stack within 2 feet above or below a stack offset with a change of direction of 30 to 45° from the vertical and the offset is located below 2 or more branch intervals, a relief vent shall be installed in accordance with par. (c), except where an offset of more than 45° from the vertical is located in the drain stack within 12 feet above the offset of 30 to 45°.

(b) Offsets of more than 45°. Except as provided in subds. 1. and 2., where a drain stack has an offset of more than 45° from the vertical located below 2 or more branch intervals, a relief vent and a yoke vent shall be installed in accordance with par. (c).

1. Where an offset of more than 45° from the vertical is located in the drain stack within 12 feet above the lower stack offset, the installation of a yoke vent shall not be required.

2. Where the offset of more than 45° is located below the lowest branch drain connection, the installation of the relief vent shall not be required.

(c) Installation. 1. Relief vent. a. A relief vent serving a drain stack offset shall be installed as a vertical continuation of the portion of the stack below the offset or as a side connection to the portion of the stack below the offset. No drain connection may be installed between the offset and the side connection of the relief vent.

b. The connection of the relief vent to the drain stack shall be by means of a wye pattern fitting.

c. The connection of a relief vent with another vent may not be less than 38 inches above the next higher floor level where the plumbing fixtures are vented, but in no case lower than 2 inches above the elevation of the highest floor level rim of any fixture served by the vent.

2. Yoke vent. a. A yoke vent serving a drain stack offset shall connect to the drain stack at or below the lowest branch drain connection to the portion of the drain stack above the offset.

b. The connection of the yoke vent to the drain stack shall be by means of a wye pattern fitting.

c. The connection of the yoke vent to another vent may not be less than 38 inches above the next higher floor level where plumbing fixtures are installed that discharge into the drain stack.

Note: See Appendix for further explanatory material.

(6) YOKE VENTS FOR STACKS OF MORE THAN 10 BRANCH INTERVALS. Drain stacks of more than 10 branch intervals shall be provided with yoke vents.

(a) Yoke vents shall be installed not more than 10 branch intervals apart nor more than 10 branch intervals from the top or bottom of the drain stack.

(b) The connection of the yoke vent to the drain stack shall be by means of a wye pattern fitting.
(c) The connection of the yoke vent to another vent shall be not less than 38 inches above the next higher floor level where plumbing fixtures are installed that discharge into the drain stack.

(7) Relief Vents for Building Drains. A building drain with a change in elevation of 12 feet or more and at an angle of 45° or more from the horizontal shall be provided with a relief vent.

(a) The connection of the relief vent to the building drain shall be by means of a wye pattern fitting installed within 2 feet upstream of the top of the change in elevation.

(b) The connection of the relief vent to another vent shall be not less than 38 inches above the next higher floor level where plumbing fixtures are installed that discharge through the building drain.

Note: See Appendix for further explanatory material.

(8) Vents for Sanitary Sumps. Sanitary sumps shall be provided with a vent connecting either to the sump above the drain inlet or to the drain inlet within 12 inches of the sump.

(9) Fixture Vents. (a) Developed length between vent and trap. Each fixture trap shall be protected with a vent located in accordance with the provisions of subds. 1. and 2.

1. Each fixture trap which is not an integral part of the fixture shall be protected with a vent so located that the developed length of the fixture drain piping from the trap weir to the vent connection is within the limits set forth in Table 82.31-1.

2. Each fixture trap which is an integral part of the fixture shall be protected with a vent so located that the developed length of the fixture drain piping from fixture outlet to the vent connection is within the limits set forth in Table 82.31-1. For a floor outlet water closet or similar fixture, the point where the fixture drain piping turns horizontal shall be considered as the fixture outlet.

</table>

a. Diameters to be selected on the basis of the smallest drain pipe installed downstream from the trap serving a particular fixture.

b. The wye pattern fitting refers to a tee-wye fitting, a combination wye and eight bend fitting or a wye and eight bend combination of fittings with no more than one inch between the wye fitting and eight bend fitting.

c. NP means Not Permitted.

d. The maximum developed length for fixture drains larger than 4 inches in diameter shall be approved by the department.

(b) Minimum distance. A vent shall not connect to a fixture drain within the distance equal to 2 diameters of the drain piping from the weir of a trap.

Note: See Appendix for further explanatory material.

(10) Circuit Vents. In lieu of providing individual vents, a horizontal drain to which at least 2 but not more than 8 wall outlet fixtures or at least 2 but not more than 8 floor outlet fixtures, other than blowout type fixtures and wall-outlet carrier type water closets, are connected to the same horizontal branch drain, may be vented by a circuit vent in accordance with pars. (a) to (e).

(a) The circuit vent shall connect to the horizontal drain at a point between the 2 most upstream fixtures.

(b) 1. A circuit vented horizontal drain into which 4 or more fixtures discharge shall be provided with a relief vent. The relief vent shall connect to the circuit vented horizontal drain downstream of the most downstream fixture drain which is vented by the circuit vent and upstream of any other drain connections.

2. Two circuit vented horizontal drains serving a total of 8 fixtures, 4 on each branch, shall be provided with at least one relief vent, unless the horizontal drains connect to a drain stack with no other drain connections located above the circuit vented horizontal drains. One relief vent may serve both horizontal drains, if installed downstream of the point where the 2 horizontal drains are joined.

Note: See Appendix for further explanatory material.

(c) A horizontal drain served by a circuit vent shall not diminish in size from the connection to the drain stack to the circuit vent connection. Where a relief vent is installed, the horizontal drain served by the circuit vent shall not diminish in size from the relief vent connection to the circuit vent connection.

(d) Fixture drains served by a circuit vent shall conform to the provisions of sub. (9). The connection of the fixture drain to the branch drain served by the circuit vent shall be considered as the vent connection.

(e) Additional wall outlet fixtures with a drainage fixture unit value of one or less which are served by individual vents or common vents may discharge into a horizontal drain served by a circuit vent.

(11) Common Vents. In lieu of providing individual vents, fixtures may be common vented in accordance with pars. (a) and (b).

(a) Vertical drains. A common vent may serve 2 fixture traps where both fixture drains connect to a vertical drain at the same elevation. Where this connection is by means of a sanitary tee fitting with a side inlet, the centerline of the side inlet opening may not be below the centerline of the larger opening. The drain connection of a blowout type fixture or a kitchen sink served by a common vent may not be by means of a double sanitary tee fitting.

(b) Horizontal branches. The fixture drains from 2 wall-outlet fixtures, each with a drainage fixture unit value of one or less, or the fixture drains from 2 traps serving a kitchen sink with or without a dishwasher may connect to a horizontal branch without individual vents provided a common vent connects to the branch drain downstream of both fixture drains. Both fixture drains shall be of the same diameter. The developed length of the drain from the vent to the farthest trap shall conform to sub. (9).

Note: See Appendix for further explanatory material.

(12) Island Fixture Venting. Island plumbing fixtures may be vented in accordance with pars. (a) to (d).

(a) Island plumbing fixtures may be vented by extending an individual vent or a common vent as high as possible under the fixture enclosure and returning the vent vertically downward and connecting it to the fixture drain by means of a wye pattern fitting.
(b) Horizontal vent piping shall connect to the vertical section of the fixture vent and extend to a point where it can extend vertically to a vent terminal in accordance with sub. (16) or connect to another vent in accordance with sub. (15).

(c) Drainage fittings shall be used on all sections of the vent pipe below the floor level and a minimum slope of 1/4 inch per foot to the drainage point shall be provided.

(d) Cleanouts shall be provided on the vent piping in accordance with s. Comm 82.35.

Note: See Appendix for further explanatory material.

Note: See sub. (17) for venting provisions relating to laboratory sinks.

(12) Wet Venting. In lieu of providing individual vents, fixtures may be wet vented in accordance with pars. (a) to (c).

(a) Vertical wet vents. 1. Where 2 wall outlet fixtures are located on the same floor level with their fixture drains connecting to the same vertical drain pipe at different elevations, the lower fixture drain may be wet vented in accordance with subd. 1. a. to e.

a. No other fixtures may discharge into the vertical drain pipe above or between the 2 wall outlet fixtures. Additional fixtures may discharge into the vertical drain pipe below the 2 wall outlet fixtures.

b. A branch vent shall connect to the vertical drain pipe immediately above the higher fixture drain connection.

c. The drain between the 2 fixtures shall be at least one pipe size larger than the upper fixture drain, but not smaller than 2 inches in diameter.

d. Both fixture drains shall conform to sub. (9). The connection of the lower fixture drain to the vertical drain shall be considered as the vent connection.

e. The higher fixture drain may not serve a water closet or urinal.

Note: See Appendix for further explanatory material.

(b) Horizontal wet vents. A drain from a lavatory or lavatories which are either provided with individual vents or a common vent may serve as the wet vent for not more than 2 bathtubs or showers and not more than 2 water closets in accordance with subds. 1. to 7. No other fixtures may discharge into or be served by the wet vent.

1. All of the fixtures shall be located in nonpublic bathroom groups.

2. The lavatories and bathtubs or showers shall have a common horizontal drain with the drain for the lavatories serving as a wet vent for the bathtubs or showers.

3. Where 2 bathtubs or showers are served by the same wet vent, their fixture drains shall connect independently to the common horizontal drain downstream of the vertical drain serving the lavatory or lavatories.

4. Where 2 bathtubs or showers and 2 water closets are served by the same wet vent a relief vent shall be provided, unless the wet vented horizontal drain connects to a drain stack with no other drain connections located above the wet-vented horizontal drain. The relief vent shall connect to the horizontal drain at a point downstream of the fixture drains for the water closets and upstream of any other fixture drain connections.

5. One or 2 water closets may connect to the common horizontal drain with the drain from the lavatories and bathtubs or showers also serving as a wet vent for the water closets. Where 2 water closets are served by the same wet vent, their fixture drains shall connect independently to the common horizontal drain at the same point.

6. The wet vent shall be at least 2 inches in diameter. No more than 4 drainage fixture units may discharge into a 2 inch diameter wet vent.

7. A branch vent shall connect immediately above the highest fixture drain connection and shall be sized in accordance with sub. (14).

(c) Other types of wet vents. An individual vent serving a floor outlet fixture, a common vent serving floor outlet fixtures, a circuit vent, a relief vent serving a circuit vented drain or a relief vent serving a wet vented horizontal drain may serve as a wet vent in accordance with subds. 1. to 4.

1. No more than 2 wall outlet fixtures, each fixture with a drainage fixture unit value of one or less, may have their fixture drains connected individually into the individual vent, common vent, circuit vent or relief vent thereby forming a wet vent.

2. The wet vent shall be at least 2 inches in diameter.

3. The branch vent to which the wet vent connects shall be sized in accordance with sub. (14). The branch vent may serve the wall outlet fixtures in lieu of individual vents or a common vent.

4. The fixtures discharging into the wet vent shall be located on the same floor level as the fixtures served by the wet vent.

(14) Vent Size. (a) Stack vents and vent stacks. Stack vent and vent stack pipe sizes shall be determined in accordance with Table 82.31-2 on the basis of developed length and the diameter of the drain stack at its base.

1. The developed length of the stack vent shall be measured along the vent pipe, from the highest drain branch connection to the vent terminal or to the connection to a vent header.

2. The developed length of the vent stack shall be measured along the vent pipe from the vent stack base connection to the vent terminal or to the connection to a vent header.

Note: See Appendix for further explanatory material.

(b) Vent headers. 1. Vent header pipe sizes shall be determined in accordance with Table 82.31-3 with the number of drainage fixture units being the sum of the fixture unit loads of the stacks vented through that portion of the header. The diameter of a vent header shall not be less than any vent connecting to it.

2. The developed length of the vent header shall be measured along the pipe from the most distant vent stack or stack vent base connection to the vent terminal.

Note: See Appendix for further explanatory material.

(c) Branch vents. Branch vent pipe sizes shall be determined in accordance with Table 82.31-3. The developed length of the branch vent shall be measured along the pipe from the fixture drain served by the branch vent to the point where it connects to a vent pipe of a larger diameter or to a vent terminal.

Note: See Appendix for further explanatory material.

(d) Individual vents. Individual vent pipe sizes shall be determined in accordance with Table 82.31-3. The developed length of an individual vent shall be measured along the pipe from the fixture drain served by the vent to the point where it connects to a vent pipe of a larger diameter or to a vent terminal.

Note: See Appendix for further explanatory material.

(e) Common vents. Common vent pipe sizes shall be determined in accordance with Table 82.31-3. The developed length of a common vent shall be measured along the vent pipe from the drain served by the vent to the point where it connects to a vent pipe of a larger diameter or to the vent terminal.

^a No water closets permitted.
^b Not more than 2 water closets or similar flush action type fixtures of 4 or more drainage fixture units.
^c NP means Not Permitted.
^d NP means Not Permitted.

(f) **Circuit vents.** Circuit vent pipe sizes shall be determined in accordance with Table 82.31–3. The developed length of the circuit vent shall be measured along the vent from the connection with the branch drain served by the vent to the point where it connects to a vent pipe of a larger diameter or to a vent terminal.

(g) **Relief vents.** Relief vents shall be sized in accordance with the provisions of subds. 1. to 4. The developed length of a relief vent shall be measured along the vent from the connection with the branch drain served by the vent to the point where it connects to a vent pipe of a larger diameter or to a vent terminal.

1. Circuit vented branch drain. The diameter of a relief vent for a branch drain served by a circuit vent shall be at least one half the diameter of the branch drain. The maximum developed length shall be determined from Table 82.31–3 based on the number of drainage fixture units served by the vent.

2. Drain stacks. A relief vent serving a drain stack shall be sized as a stack vent in accordance with par. (a).

3. Building drain. The diameter of a relief vent serving a building drain, as required in sub. (7), shall be at least one half the diameter of the building drain. The maximum developed length shall be determined from Table 82.31–3 based on the number of drainage fixture units served by the vent.

4. Horizontal wet vent. The diameter of a relief vent serving a horizontal wet vent shall be at least 1 1/2 inches. The maximum developed length shall be determined from Table 82.31–3 based on the number of drainage fixture units served by the vent.

(h) **Yoke vents.** A yoke vent serving a drain stack shall be sized as a vent stack in accordance with par. (a).
(i) **Vent for sumps.** 1. a. Except as provided in subd. 1. b., the size of a vent for a sanitary pump with other than a pneumatic ejector, shall be determined in accordance with Table 82.31-4.
   b. The size of a vent for a sanitary sump located outside with other than a pneumatic ejector shall be determined in accordance with Table 82.31-4, but shall not be less than 2 inches in diameter.

2. The air pressure relief pipe from a pneumatic ejector shall not be connected to vent or vent system serving a sanitary drain system, storm drain system, or chemical waste system.
   a. The relief pipe shall be of a size to relieve the air pressure inside the ejector to atmospheric pressure, but shall not be less than 2 inches in diameter where the ejector is located outside and 1 1/4 inches in diameter for all other ejector locations.
   b. The vent shall terminate in accordance with the provisions of sub. (16).

(15) **VENT GRADES AND CONNECTIONS.** (a) **Vent grade.** All vent and branch vent pipes shall be graded and connected so as to drain back to a drain pipe by means of gravity.

(b) **Installation.** Vents shall be installed in accordance with subds. 1. to 3.

1. Except for wet vent piping, the connection of a vent to horizontal drain piping shall be at a point above the horizontal center line of the drain piping.

²The developed length of the vent is measured along the pipe from the connection to the sump, to the point where it connects to a vent pipe of a larger diameter.

¹ NL means No Limit.

² NP means Not Permitted.

(16) **VENT TERMINALS.** All vents and vent systems shall terminate in the open air in accordance with this subsection.

(a) **Extension above roofs.** Extensions of vents through a roof shall terminate at least 8 inches above the roof. Where the roof is to be used for any purpose other than weather protection, the vents shall extend at least 7 feet above the roof.

(b) **Waterproof flashings.** The penetration of a roof system by a vent shall be made watertight with an approved flashing.

(c) **Prohibited uses.** Vent terminals shall not be used as flag poles, support for antennas or other similar purposes.

(d) **Location of vent terminals.** 1. A vent shall not terminate under the overhang of a building.
   2. All vent terminals shall be located:
      a. At least 10 feet from an air intake;
      b. At least 5 feet from a power exhaust vent;
      c. At least 10 feet horizontally from 2 feet above roof scuttles, doors and openable windows; and
      d. At least 5 feet from or 2 inches above parapet walls.

3. Where a structure has an earth covered roof extending from surrounding grade, the vent extension shall run at least 7 feet above grade and terminate with an approved vent cap. The portion of vent pipe outside the structure shall be without joints, except one fitting may be installed where the pipe leaves the top or side of the structure.

(e) **Extension through wall.** Where approved by the department, a vent may terminate through an exterior wall. Such a vent shall terminate at least 10 feet horizontally from any lot line and shall terminate downward. The vent shall be screened and shall comply with par. (d).

(f) **Extensions outside buildings.** Drain or vent pipe extensions shall not be located or placed on the outside of an exterior wall of any new building, but shall be located inside the building.

(g) **Frost closure.** For protection against frost closure, each vent terminal shall be at least 2 inches in diameter. Where it is necessary to increase the diameter of the vent, the change in diameter shall be made at least 6 inches inside the building.

Note: See Appendix for further explanatory material.

(17) **COMBINATION DRAIN AND VENT SYSTEMS.** In lieu of providing individual vents, fixtures may be vented in accordance with pars. (a) to (c).

(a) **Stacks.** 1. A drain stack may serve as a combination drain and vent system for identical fixtures in accordance with subd. 1. a. to e.
   a. The drain stack shall not serve more than 3 identical fixtures. Each fixture shall be located on a separate floor level.
   b. The drain stack shall be limited to serving kitchen sinks with or without food waste grinders or dishwasher connections within dwelling units, drinking fountains and lavatories.
   c. The drain stack shall not be offset horizontally above the lowest fixture drain connection.
   d. The developed length of any fixture drain from the trap weir to the drain stack shall not exceed the limits specified in Table 82.31-1.
   e. The drain stack and its attendant stack vent shall be sized in accordance with Table 82.31-5.

Note: See Appendix for further explanatory material.

f. For the purpose of this subdivision a vent stack shall not be required to serve this type of combination drain and vent arrangement.

2. A drain stack may serve as a combination drain and vent system for a kitchen sink and a laundry tray in accordance with subd. 2. a. to d.
   a. One kitchen sink within a cooking unit, with or without a food waste grinder or dishwasher connection shall connect to the drain stack above the laundry tray. No other fixtures may connect to the drain stack.

Register, April, 2000, No. 532
b. The drain stack shall be at least 2 inches in diameter below the kitchen sink connection and it shall be at least 4 inches in diameter below the laundry tray connection.

c. In lieu of the minimum sizes as required in subd. 2. b., the entire stack below the kitchen sink connection may be 3 inches in diameter.

d. The drain stack shall not offset horizontally above the fixture drain connection for the laundry tray.

(b) Building drains. A building drain or a building subdrain may serve as a combination drain and vent system for floor drains and floor outlet fixtures in accordance with subds. 1. to 6.

1. A vent stack or a drain stack at least 2 inches in diameter shall be connected upstream of any building drain branch or building subdrain branch.

2. No more than 2 water closets may connect to the building drain or building subdrain by means of building drain branches or building subdrain branches.

3. a. That portion of the building drain or building subdrain between the connection of the building drain branch or building subdrain branch and the vent stack or drain stack required in subd. 1. shall be at least one pipe size larger than the minimum size permitted in Table 82.30–3 based on the total drainage fixture unit load.

b. The vent stack or drain stack required in subd. 1. shall be at least one-half the diameter of that portion of the building drain or building subdrain which is vented by the stack, but may not be less than 2 inches in diameter.

c. A stack vent serving a drain stack required in subd. 1. shall be at least one-half the diameter of that portion of the building drain or building subdrain which is vented by the stack, but may not be less than 2 inches in diameter.

4. The trap of a floor drain or a floor outlet fixture, except a water closet, connected to a building drain branch or building subdrain branch shall be at least 3 inches in diameter.

5. A building drain branch or building subdrain branch may not connect to a building drain or building subdrain downstream from the base fitting of a drain stack 2 inches or larger in diameter within the distance equal to 20 pipe diameters of the building drain or building subdrain.

6. The pitch and the developed length of the building drain branch or building subdrain branch may not exceed the limits specified in Table 82.31–1.

Note: See Appendix for further explanatory material.

(c) Laboratory sink venting. A horizontal drain may serve as a combination drain and vent system for island laboratory sinks in accordance with subds. 1. to 7.

1. A vent stack or a drain stack at least 2 inches in diameter shall be connected upstream of any fixture drain vented by the combination drain and vent system.

2. a. That portion of the horizontal drain between the connection of fixture drain and the vent stack or drain stack required in subd. 1. shall be at least one pipe size larger than the minimum size permitted in Table 82.30–2 based on total drainage fixture unit load.

b. The vent stack or drain stack required in subd. 1. shall be at least one-half the diameter of that portion of the horizontal drain which is vented by the stack, but may not be less than 2 inches in diameter.

c. A stack vent serving a drain stack required in subd. 1. shall be at least one-half the diameter of that portion of the horizontal drain which is vented by the stack, but may not be less than 2 inches in diameter.

3. All fixture drains vented by the horizontal drain shall be at least 3 inches in diameter.

4. Fixture drains to be vented by the horizontal drain shall connect individually to the horizontal drain.

5. An individual vent or common vent shall be extended as high as possible under the sink enclosure and then returned vertically downward and connected to the horizontal drain. A cleanout shall be provided on the vent piping.

6. In lieu of connecting the vent to the horizontal drain which forms the combination drain and vent system, the vent may connect to a horizontal fixture drain vented by the combination drain and vent system. The pitch and developed length of the horizontal fixture drain shall not exceed the limits specified in Table 82.31–1.

7. Fixture drains to be vented by the horizontal drain shall not connect to a horizontal drain downstream from the base fitting of a drain stack 2 inches or larger in diameter within the distance equal to 20 pipe diameters of the horizontal drain serving the stack.

Note: See Appendix for further explanatory material.

(18) Prohibited uses. A vent or vent system shall not be used for purposes other than the venting of the plumbing system.

(a) Boiler blowoff basin vents. Vent piping from boiler blowoff basins shall not be connected to a vent or vent system serving a sanitary drain system, storm drain system or chemical waste system.

(b) Chemical waste vents. Vent piping for chemical waste systems shall not be connected to a vent system serving a sanitary drain system or storm drain system.

(c) Steam vents. Vents serving steam operated sterilizers, cleansing or degreasing equipment, pressuring machines or any other apparatus which normally discharges steam into the vent shall not be connected to a vent or a vent system serving a sanitary drain system, storm drain system or chemical waste system.

History: Cr. Register, February, 1985, No. 330, eff. 3–1–85; am. (11) (a), (17) (b) 3, b. and (c) 3, b., r. and recr. (11) (b) 6, r. (13) (b) 2, cr. (6) (c), (7) (b), (10) intro., (a) (b) 1., (c), (13) (a) 1., (c) intro., 1. and 4., r. (16) (b), Register, February, 1994, No. 451, eff. 3–1–94.

Comm 82.32 Traps and direct fixture connections.

(1) Scope. The provisions of this section set forth the requirements for the types and installation of traps and direct fixture connections.

(2) Materials. All traps and fixture connections shall be of approved materials in accordance with ch. Comm 84.

(3) General. Each plumbing fixture, each compartment of a plumbing fixture and each floor drain shall be separately trapped by a water seal trap, except as provided in par. (a). A fixture shall not be double trapped.

(a) Trap exceptions. The plumbing fixtures listed in subds. 1. to 3. shall not be required to be separately trapped:

1. Fixtures having integral traps;

2. Compartments of a combination plumbing fixture installed on one trap, provided:

a. No compartment is more than 6 inches deeper than any other;

b. The distance between the compartments' waste outlets farthest apart does not exceed 30 inches; and

c. No compartment waste outlet is equipped with a food waste grinder.

3. Storm drains as provided in s. Comm 82.36 (14) (b).

(b) Trap seals. Each trap shall provide a liquid seal depth of not less than 2 inches and not more than 4 inches, except as otherwise specified in this chapter.

(c) Loss of trap seal. A trap seal primer valve may be installed on a trap subject to high rates of evaporation.

1. A trap seal primer valve shall be installed on a receptor of indirect wastes not subject to year round use.

2. Trap seal primer valves shall conform to ASSE 1018.

Note: A list of referenced standards is contained in ch. Comm 84.
(d) **Design.** Traps shall be self-scouring and shall not have interior partitions, except where such traps are integral with the fixture. Uniform diameter P-traps shall be considered self-scouring.

(e) **Size.** Traps shall be of diameters not less than those specified in Table 82.30–1 of s. Comm. 82.30.

(f) **Prohibited traps.** The installation of the types of traps listed in subds. 1. to 6. shall be prohibited:
1. Bell traps;
2. Drum traps, except where specifically approved by the department;
3. S-traps which are not integral parts of fixtures;
4. Separate fixture traps which depend on interior partitions for the trap seal;
5. Traps which depend upon moving parts to maintain the trap seal; and
6. Traps which in case of defect would allow the passage of sewer air.

(4) **Installation.** (a) **Setting of traps.** All traps shall be rigidly supported and set true with respect to the water level and so located as to protect the water seals, and shall be protected from freezing and evaporation.

(b) **Distance from fixture drain outlets.** 1. **Vertical distance.** Except as provided in subd. 1. a. to c., the vertical distance between the top of the fixture drain outlet and the horizontal center line of the trap outlet shall not exceed 15 inches.
   a. The vertical distance between the top of the strainer of a floor drain or the opening of a standpipe receptor and the horizontal center line of the trap outlet shall not exceed 36 inches.
   b. The vertical distance between the top of the fixture drain outlet of a pedestal drinking fountain, a cuspidor or a drain receptor for a sanitary dump station and the horizontal center line of the trap outlet shall not exceed 60 inches.
   c. The vertical distance between the water level in the bowl of a floor outlet water closet and the center line of the horizontal portion of the fixture drain shall not exceed 36 inches.
   2. **Horizontal distance.** The horizontal distance between the vertical center line of a fixture drain outlet and the vertical center line of the trap inlet shall not exceed 15 inches, except the horizontal distance for a pedestal drinking fountain shall not exceed 24 inches.

Note: See Appendix for further explanatory material.

(5) **Direct fixture drain connection.** Except as provided in s. Comm. 82.33, all plumbing fixtures and appliances discharging wastes shall connect directly to a drain system.

(a) **Floor drains.** 1. Floor drains shall be so located as to be accessible for cleaning purposes.
2. A floor drain receiving the wash from garbage cans shall be at least 3 inches in diameter.

(b) **Kitchen sinks.** Horizontal drain piping serving a kitchen sink trap shall not connect to vertical drain piping by means of a double sanitary tee.

(c) **Water closets.** A water closet shall discharge through a drain pipe or fitting with a minimum diameter of 3 inches.
1. A floor mounted wall outlet water closet shall connect to a 4 inch or 4 × 3 inch closet collar fitting or to a horizontal or vertical carrier type fitting.
2. A floor outlet water closet shall connect to a 4 inch or 4 × 3 inch closet collar fitting. A 4 × 3 inch closet bend fitting may be installed where a 4 inch closet collar fitting is used.
3. A wall mounted wall outlet water closet shall connect to a horizontal or vertical carrier type fitting.
4. Two water closets discharging to a vertical drain from opposite sides by means of the same fitting shall be installed in accordance with subd. 4. a. and b.
   a. Where the vertical drain is 3 inches in diameter, the fitting for floor outlet water closets shall be a 3 inch double wye pattern fitting.

b. Where the water closets are wall outlet types the fitting shall be a double wye pattern fitting or a carrier-type fitting.

(d) **Blowout-type fixtures.** Blowout-type plumbing fixtures shall be installed in accordance with the approval of the department.

History: Cr. Register, February, 1985, No. 350, eff. 3–1–85; am. (4) (a), (c) (intro) and (d), Register, May, 1988, No. 389, eff. 6–1–88; am. (4) (b) 1. b., Register, April, 2000, No. 532, eff. 7–1–00.

Comm 82.33 Indirect and local waste piping.

(1) **Scope.** (a) The provisions of this section set forth the requirements for the installation of indirect waste piping and local waste piping.
(b) Indirect waste piping and local waste piping draining the fixtures, appliances and devices having a public health concern, including but not limited to those listed in Table 82.33–1, shall be considered as plumbing and shall comply with the provisions of this section.

| Table 82.33–1 |
| Types of fixtures, appliances and devices of a public health concern |
| Refrigerated food storage rooms and compartments | Coffee makers and urns |
| Refrigerated food display cases | Food processing equipment |
| Ice compartments | Baptismal founts |
| Vending machines | Clothes washers and extractors |
| Steam tables and kettles | Dishwashers |
| Food preparation sinks | Stills |
| Potato peelers | Sterilizers |
| Egg boilers | Bar and soda fountains |
| Boiler blowoff basin outlet drains |

(2) **Materials.** Indirect waste piping more than 30 inches in length and all local waste piping shall be of approved materials in accordance with ch. Comm 84.

(3) **Size.** Except as provided in pars. (a) and (b), indirect waste piping more than 30 inches in length and all local waste piping shall be sized in accordance with s. Comm 82.30.

(a) Indirect or local waste piping not exceeding 20 feet in length for refrigerated food display cases may not be less than one inch in diameter.
(b) Indirect waste piping, attached to an appliance, apparatus or equipment through which pressurized waste is discharged, shall be sized in accordance with specifications of the manufacturer of the appliance, apparatus or equipment.

(4) **Installation.** Indirect waste piping and local waste piping shall be so installed as to permit access for flushing and cleaning.

(5) **Traps.** (a) **Indirect waste piping.** 1. Gravity flow indirect waste piping more than 30 inches in length shall be provided with a trap in accordance with s. Comm 82.32 (4), except indirect waste piping draining a sterilizer shall not be trapped.
2. All indirect waste piping draining a refrigerated compartment shall be provided with a trap in accordance with s. Comm 82.32 (4).
(b) **Local waste piping.** Local waste piping handling sanitary wastes and more than 30 inches in length shall be provided with a trap in accordance with s. Comm 82.32 (4).

(6) **Maximum length.** Indirect waste piping and local waste piping handling sanitary wastes shall not exceed 30 feet in length horizontally nor 15 feet in length vertically.

Note: See Appendix for further explanatory material.

Register, April, 2000, No. 532
(7) Air-gaps and air-breaks. All indirect waste piping and all local waste piping shall discharge by means of an air-gap or air-break into a receptor.

(a) Air-gap installation. 1. The distance of an air-gap between indirect waste piping one inch or less in diameter and the receptor shall be at least twice the diameter of the indirect waste piping.

2. The distance of an air-gap between indirect waste piping larger than one inch in diameter and the receptor shall be not less than 2 inches.

(b) Air-break installation. The air-break between indirect waste piping or local waste piping and the receptor shall be accomplished by extending the indirect waste piping or local waste piping below the flood level rim of the receptor.

(c) Waste sinks and standpipes. 1. A waste sink or a standpipe serving as a receptor shall have its rim at least one inch above the floor.

2. A waste sink or a standpipe serving as a receptor shall be individually trapped in accordance with s. Comm 82.32.

(b) Floor sinks. A floor sink serving as a receptor shall be equipped with a removable metal basket over which the indirect waste piping or local waste piping is to discharge, or the floor sink shall be equipped with a dome strainer. Indirect waste piping or local waste piping shall not discharge through a traffic grate, but shall terminate over an ungrated portion of the floor sink.

(c) Local waste piping. 1. Local waste piping serving as a receptor shall discharge to a waste sink, standpipe or floor sink, except as provided in subd. 2.

2. Local waste piping serving as a receptor for a water heater safety relief valve may discharge to a floor drain.

3. Local waste piping may not receive the discharge from another local waste pipe.

(d) Prohibited receptors. Except as provided in subds. 1. and 2., a plumbing fixture which is used for domestic or culinary purposes shall not be used as a receptor for indirect waste piping or local waste piping.

1. The indirect waste piping of a portable dishwasher or point-of-use water treatment device may discharge into a kitchen sink of a dwelling unit.

2. The indirect waste piping of an automatic clothes washer or water treatment device may discharge into a laundry tray.

Note: See Appendix for further explanatory material.

(9) Indirect waste piping required. (a) Boilers, pressure tanks and relief valves. Boilers, pressure tanks, relief valves and similar equipment discharging to a drain system shall be by means of an air-gap.

1. Steam pipes shall not connect or discharge to any part of a plumbing system.

2. Waste water more than 160°F in temperature shall not discharge into any part of a plumbing system.

(b) Clear water wastes. 1. Clear water wastes, except those from a drinking fountain, discharging to a drain system shall be by means of an air-gap.

2. The clear water wastes from a drinking fountain discharging to a drain system shall be by means of a direct connection.

(c) Clothes washers. 1. Residential types. Residential-type clothes washers shall discharge into the sanitary drain system by means of an air-break.

a. A standpipe receptor may not extend more than 36 inches nor less than 18 inches above the top of the trap weir.

b. The top of a standpipe receptor shall terminate at least 32 inches but not more than 42 inches above the floor on which the washer is located.

2. Self-service laundries. Pumped discharge automatic clothes washing equipment in launderettes, laundromats and self-service laundry establishments shall have the wastes discharge to a drain system by means of standpipes. The standpipes shall be installed in accordance with subd. 1.

a. The maximum number of washers which may be connected to a trap shall be in accordance with Table 82.33-2.

b. Washer wastes shall not be discharged to gutters, troughs, local waste piping, indirect waste manifold or other similar connections.

3. Commercial. Gravity discharge-type clothes washing equipment shall discharge by means of an air-break or by other approved methods into a floor receptor, trench or trough.

a. The receptor shall be sized to hold one full simultaneous discharge load from every machine discharging into the receptor.

b. The size of the receptor drain shall be determined by the manufacturer's discharge flow rate and the frequency of discharge.

Note: See Appendix for further explanatory material.

(c) All wastes from the washers shall flow through a commercial laundry interceptor as specified in s. Comm 82.34.

Table 82.33-2

(d) Dishwashing machines. 1. Residential-type. A residential-type dishwashing machine shall discharge to the sanitary drain system by means of a fixed air-gap or air-break located above the high water level of the dishwashing machine. The indirect waste piping or hose from the dishwashing machine shall not exceed a developed length of 10 feet. The indirect waste piping shall be installed in accordance with one of the methods specified in subd. 1. a. and b.

a. An air-gap or air-break may be located below a countertop. Where the air-gap or air-break is located below a countertop, the indirect waste piping from the dishwashing machine shall discharge into a standpipe. The standpipe shall be at least 1½ inches in diameter and shall extend at least 12 inches above the trap inlet.

b. An air-gap may be located above a countertop. Where the air-gap is located above a countertop, the indirect waste piping from a dishwashing machine shall discharge into either a standpipe or local waste piping. The standpipe shall be at least 1½ inches in diameter and shall extend at least 12 inches above the trap inlet. The local waste piping shall connect to the fixture drain of a kitchen sink above the trap inlet. Where a hose is used for local waste piping, the developed length shall not exceed 18 inches.

2. Commercial. Commercial dishwashing machines shall discharge into a sanitary drain system by means of an air-gap or air-break into a trapped and vented receptor. The indirect waste piping may not be more than 30 inches in length.

3. Prohibited installations. No dishwashing machine may discharge into or through a food waste grinder.

Note: See Appendix for further explanatory material.

(e) Drips and drain outlets. Appliances, devices and apparatus not defined as plumbing fixtures which have drip or drain outlets shall be drained through indirect waste piping into an open receptor by means of an approved air-gap or air-break.
Elevator drains. 1. All drains serving elevator pits shall discharge to the storm drain system as specified in s. Comm 82.36 (3).
2. Drains serving elevator pits shall not connect directly with the storm drain system by means of gravity flow piping.
3. A pump may not be located in an elevator machine room.
4. A drain serving an elevator pit that discharges to a sump shall have a submerged inlet constructed to maintain a minimum of 6 inch trap seal.
5. A sump located in an elevator pit may only receive storm or clear water waste from the elevator pit or the elevator machine room, or both.

Food handling establishments. Plumbing fixtures, devices and appurtenances installed in food handling establishments engaged in the storage, preparation, selling, serving or processing of food shall be installed in accordance with this paragraph.
1. Bar and soda fountain sinks. Where a bar or soda fountain sink is so located that the trap for the sink cannot be vented as specified in s. Comm 82.31, the sink drain shall discharge to the sanitary drain system through indirect waste piping.
   a. Where the indirect waste piping is not trapped, the wastes shall be discharged by means of an air-gap.
   b. Where the indirect waste piping is trapped, the wastes shall be discharged by means of an air-gap or air-break.
2. Beer taps, coffee makers, glass fillers and soda dispensers. The drip pan from a beer tap, coffee maker, glass filler, soda dispenser or similar equipment shall discharge to the sanitary drain system through indirect waste piping by means of an air-break or air-gap.
3. Novelty boxes, ice compartments and ice cream dipper wells. Novelty boxes, ice compartments and ice cream dipper wells shall discharge to the sanitary drain system through indirect waste piping by means of an air-gap.
   a. The indirect waste piping shall not exceed 30 inches in length.
   b. The indirect waste piping draining a novelty box or ice compartment may not discharge or connect to the indirect waste piping or local waste piping of any other fixture, appliance or device other than a novelty box or ice compartment.
4. Refrigerated food storage rooms, compartments and display cases. Drains serving refrigerated food storage rooms, compartments or display cases shall discharge to the sanitary drain system through indirect waste piping. The indirect waste piping shall drain by gravity to a receptor by means of an air-gap or air-break. Where an air-break is installed, the flood level rim of the receptor shall be at least 2 inches below the top of the fixture strainer or drain opening in the refrigerated room, compartment or display case.
5. Enclosed food processing equipment. Coffee urns, egg boilers, potato peelers, steam kettles, steam tables, vending machines and similar types of enclosed food processing equipment shall be discharged to the sanitary drain system through indirect waste piping by means of an air-gap.
6. Preparation sinks. Open culinary sinks for thawing or washing food shall discharge to the sanitary drain system through indirect waste piping by means of an air-gap. The indirect waste piping may not exceed a length of 30 inches.

Sterilizers. Appliances devices or apparatus, such as stills, sterilizers and similar equipment requiring waste connections and used for sterile materials, shall discharge through indirect waste piping to the sanitary drain system by means of an air-gap.

Swimming pools. 1. Waste water from swimming or wading pools, including pool drainage and backwash from sand filters, shall be discharged to the storm sewer through indirect waste piping.
2. Waste water from floor drains which serve interior walls around pools and backwash from diatomaceous earth filters shall be discharged to the sanitary sewer through indirect waste piping.
3. Where a recirculation pump is used to discharge waste pool water to the drain system, the pump shall discharge to the drain system through indirect waste piping.
4. All indirect waste piping serving pools and pool areas shall discharge by means of an air-gap.
5. The requirements for sewer connections as specified in ch. Comm 50 shall apply to all swimming pools.

Vacuum systems—central units. Central vacuum units shall discharge by means of an air-gap or air break.

Water treatment devices. The waste discharge of a water treatment device to the drain system shall be protected in accordance with s. Comm 82.41 with respect to cross connection control.

For appliances, devices and equipment not included in this section or other sections, contact the department for information and proposed installation review.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85; r. and rec. Table 82.33(3) and (4) (g) 3., cr. (g) 1., Register, April, 1998, No. 508, eff. 5-1-98; am. (g) 1. 5., made under s. 139.93 (2m) 7., Stats., Register, April, 1998, No. 508.

Interceptors and catch basins for special and industrial wastes. (1) Scope. The provisions of this section set forth the requirements for design and installation of interceptors and catch basins to handle special and industrial wastes.

(2) Materials. All piping, interceptors and catch basins for special and industrial wastes shall be of approved materials in accordance with ch. Comm 84.

(3) General. Any deleterious waste material which is discharged into a plumbing system shall be directed to an interceptor, catch basin or other approved device. The interceptor, catch basin or approved device shall be capable of separating the deleterious waste material from the normal sewage and retaining the deleterious waste material to facilitate its periodic removal or treatment or both.

(a) Deleterious waste materials. For the purpose of this subsection, deleterious waste materials include any waste material, other than that from dwelling units, which may:
   1. Congeal, coagulate or accumulate in drains and sewers, thereby, creating stoppages or retarding the discharge flow;
   2. Retard or interfere with municipal sewage treatment processes;
   3. Pass through a treatment process and pollute the waste-water receiving the treatment effluent;
   4. Create explosive, flammable, noxious, toxic or other hazardous mixtures of materials; or
   5. Damage, destroy or deteriorate sewers or piping materials or structures.

Note: See ch. Comm 10 as to flammable and combustible liquids.

(b) Private disposal systems. The special or industrial wastes from any plumbing system which are not discharged into a public sewer system shall be treated or disposed in compliance with the rules of the state agency having jurisdiction. The treatment or disposal system shall be installed so as to not endanger any water supply which is or may be used for drinking, culinary or bathing purposes, or which may create a nuisance, unsanitary conditions or water pollution.

(c) Velocity control. Interceptors, catch basins and other similar devices shall be designed, sized and installed so that flow rates shall be developed and maintained in a manner that solid and floating materials of a harmful, hazardous or deleterious nature will be collected in the interceptor for disposal.
(d) Maintenance. All devices installed for the purpose of intercepting, separating, collecting, or treating harmful, hazardous or deleterious materials in liquid or liquid–home wastes shall be operated and cleaned of intercepted or collected materials or of any residual from treatment at such intervals which may be required to prevent their passage through the interceptor.

(e) Service reassembly. Any fixed orifice, vent or trap of an interceptor, catch basin or other similar device shall remain intact and shall not be removed or tampered with except for cleaning purposes. After service, all parts of the interceptor, collector or treatment device, such as baffles, weirs, orifice plates, channels, vents, traps, tops, and fastening bolts or screws shall be replaced in proper working position.

(f) Location. 1. Interceptors, catch basins and other similar devices shall be accessible for service, maintenance, repair and inspection.

a. No interceptor, catch basin or similar device may be surrounded or covered as to render it inaccessible for service or inspection.

b. No interceptor, catch basin or similar device may have its top located more than 6 feet above the surrounding floor.

c. Enough space shall be provided to enable the removal of any interior parts of the interceptor, catch basin or similar device.

d. At least 18 inches of clear space shall be provided above the top of the interceptor, catch basin or similar device.

2. An interceptor, catch basin, or similar device shall not be located within 25 feet of a water well.

(g) Construction. 1. Base. Site-constructed catch basins and interceptors shall have at least a 6 inch thick air–entrained concrete base with a minimum estimated compressive strength at 28 days of 3000 psi or an approved precast base.

2. Sides and tops. The sides and tops of poured–in–place concrete catch basins and interceptors shall be at least 6 inches thick air–entrained concrete with a minimum estimated compressive strength at 28 days of 3000 psi.

3. Prefabricated. Prefabricated catch basins and interceptors shall be approved by the department prior to installation.

(h) Disposition of retained materials. Deletious waste materials retained by an interceptor, catch basin or similar device shall not be introduced into any drain, sewer or natural body of water without approval of the state agency having jurisdiction.

(4) Garage catch basins and interceptors. (a) Public buildings. Except as provided in subd. 1., the discharge waste from floor areas of public buildings on which self–propelled land, air or water vehicles can be driven, stored or serviced or on which engines or motorized equipment is serviced or stored shall be discharged through a garage catch basin or through a sand interceptor and an oil interceptor.

1. Exception. The discharge wastes of those floor areas where only vehicles such as forklifts are utilized shall not be required to be discharged through a garage catch basin or interceptor.

2. Design of garage catch basins. a. The base for a site–constructed garage catch basin shall extend at least 4 inches beyond the outside of the catch basin wall.

b. The catch basin shall have a minimum inside diameter or horizontal dimension of 36 inches and a minimum inside depth of 48 inches.

c. The outlet for a catch basin shall be at least 4 inches in diameter. The outlet shall be submerged to form a trap with a water seal of at least 6 inches. The bottom of the trap’s water seal shall be at least 18 inches above the bottom of the catch basin.

d. The drain from the catch basin shall be provided with a cleanout extended to grade. The cleanout shall be sized in accordance with s. Comm 82.35.

e. The waterline in the catch basin shall be at least 2 inches below horizontal drains discharging into the catch basin.

f. The catch basin shall be provided with an open grate cover of at least 24 inches in diameter.

g. Where the outlet for a catch basin is installed so that the waterline is more than 12 inches below the floor level, a local vent pipe of at least 4 inches in diameter shall be provided. The local vent pipe shall connect to the catch basin at least 2 inches above the waterline and shall terminate in accordance with s. Comm 82.31 (16) or to the outside of the building with a return bend fitting or vent cap terminating not less than one foot above grade.

h. Not more than 8 trapped floor drains of at least 3 inches in diameter may connect individually to the lowest horizontal portion of a local vent where that lowest horizontal portion of the local vent does not exceed a length of 100 feet. The change in elevation of the fixture drain between the trap weir of the floor drain and the local vent shall not exceed the diameter of the fixture drain pipe.

i. Trapped floor drains, at least 3 inches in diameter, may connect to a garage catch basin. The change in elevation of the fixture drain between the trap weir of the floor drain and the catch basin shall not exceed the diameter of the fixture drain pipe.

3. Trench drain. a. Each open grate trench which is to serve floor areas subject to vehicular traffic shall discharge to a catch basin by means of a fixture drain of at least 4 inches in diameter.

b. The fixture drain from a trench drain shall extend at least 6 inches below the waterline of the catch basin.

c. The developed length of the fixture drain between the trench drain and the catch basin shall not exceed the distance equal to 24 times the diameter of the fixture drain.

Notes: See Appendix for further explanatory material.

(b) Garages for one– and 2–family dwellings. 1. Floor drains serving garages for one– and 2–family dwellings shall be provided with a solid bottom sediment basket.

Notes: See Appendix for further explanatory material.

2. Catch basins serving garages for one– and 2–family dwellings shall be in accordance with par. (a).

(c) Grates for garage catch basins, floor drains and trenches. A garage catch basin, floor drain and trench drain shall be provided with an approved, removable cast iron or steel grate of a thickness and strength for the anticipated loads. The grate shall have an available inlet area equal to at least the outlet drain for the catch basin, floor drain or trench drain.

(5) Grease interceptors. All plumbing installations for occupancies, other than dwelling units, where grease, fats, oils or similar waste products of cooking or food are introduced into the drain system shall be provided with interceptors in accordance with this subsection. All drains and drain piping carrying oil, grease or fats shall be directed through one or more interceptors as specified in par. (a).

(a) General. 1. Public sewers. All new, altered or renovated plumbing systems which discharge to public sewers shall be provided with one or more exterior grease interceptors or one or more interior grease interceptors.

a. Where one or more exterior grease interceptors are provided all and only kitchen wastes shall be discharged to an exterior interceptor.

b. Where one or more interior grease interceptors are provided the wastes from a food waste grinder or a sanitizing compartment of a sink, or both, may bypass the interceptor or interceptors.

2. Private onsite wastewater treatment systems. All new, altered or renovated plumbing systems which discharge to private onsite wastewater treatment systems shall be provided with exterior grease interceptors.

a. Except as provided in subd. 2. b., only kitchen and food wastes shall be discharged to an exterior grease interceptor.

b. Where approved by the department combined kitchen wastes and toilet wastes may be discharged directly to a septic
tank or tanks which conform to par. (b). The required capacity of a grease interceptor shall be added to the required septic tank capacity as specified in ch. Comm 83.

3. Existing installations. The department may require the installation of either interior or exterior interceptors for existing plumbing installations where the waterway of a drain system, sewer system or private onsite wastewater treatment system is reduced or filled due to congealed grease.

(b) Exterior grease interceptors. Exterior grease interceptors shall receive the entire waste discharge from kitchens or food processing areas. All exterior interceptors shall be designed and constructed in accordance with this paragraph, so as to constitute an individual structure.

1. Design. a. The liquid depth of the interceptor shall not be less than 42 inches nor more than an average of 72 inches.

b. A rectangular interceptor tank shall have a minimum width of 36 inches and a minimum length of 72 inches. The longest dimension of the tank shall be parallel to the direction of waste flow.

c. A horizontal-cylindrical interceptor tank shall have a minimum inside diameter of 52 inches and a minimum length of 72 inches. The largest dimension of the tank shall be parallel to the direction of waste flow.

d. Vertical-cylindrical interceptor tanks shall have a minimum inside diameter of 72 inches.

e. Each prefabricated interceptor tank shall be clearly marked to indicate liquid capacity and the name and address of the manufacturer. The markings shall be impressed into or embossed onto the outside wall of the tank immediately above the outlet opening. Each site-constructed concrete tank shall be clearly marked at the outlet opening to indicate the liquid capacity. The marking shall be impressed into or embossed onto the outside wall of the tank immediately above the outlet opening.

f. The inlet and outlet openings of interceptor tanks or tank compartments shall be provided with, open-end sanitary tee fittings or baffles, so designed and constructed as to distribute the flow and retain the grease in the tank or tank compartments. The sanitary tee fittings or baffles shall extend at least 6 inches above the liquid level. At least 2 inches of clear space shall be provided above the top of the sanitary tee fittings or baffles. The sanitary tee fitting or baffle at the inlet opening shall extend below the liquid level of the tank a distance equal to 7/8 of the total liquid depth. The sanitary tee fitting or baffle at the outlet opening shall extend below the liquid level of the tank a distance equal to 2/3 of the total liquid depth. The waterline in the interceptor shall be at least 2 inches below the horizontal drain discharging to the interceptor.

g. Each compartment of an interceptor tank shall be provided with at least one manhole opening located over either the inlet or outlet opening. Additional manhole openings shall be provided such that no interior compartment wall of a tank is more than 4 feet from the edge of the manhole opening. The distance between manhole openings serving the same compartment shall not exceed 8 feet. Manhole openings shall be not less than 24 inches in the least dimension. Manholes shall terminate at or above ground surface and be of approved materials. Steel tanks shall have a minimum 2 inch collar for the manhole extensions permanently welded to the tank. The manhole extension on fiberglass tanks shall be of the same material as the tank and an integral part of the tank. The collar shall have a minimum height of 2 inches.

h. Manhole risers for interceptor tanks shall be provided with a substantial, fitted, watertight cover of concrete, steel, cast iron or other approved material. Manhole covers shall terminate at or above ground and shall have an approved locking device.

i. A minimum 4 x 6 inch permanent label shall be affixed to the manhole cover, identifying the interceptor tank with the words GREASE INTERCEPTOR. Where the tank acts as the septic tank and grease interceptor the label shall identify it as such. The wording used on the warning label shall be approved by the department as part of the materials approval for the tank under ch. Comm 84.

j. An inlet or outlet opening which does not have a manhole opening as specified in subd. 1. g. shall be provided with an airtight inspection opening located over the inlet or outlet. The inspection opening shall be at least 4 inches in diameter. The inspection opening shall terminate at or above grade.

Note: See Appendix for further explanatory material.

2. Capacity and sizing. The minimum liquid capacity of a grease interceptor shall be determined in accordance with the provisions of this subdivision, except no grease interceptor may have a capacity of less than 1000 gallons if the interceptor is to discharge to a private onsite wastewater treatment system or less than 750 gallons if the interceptor is to discharge to a municipal sewer system and treatment facility.

a. The minimum capacity of a grease interceptor serving a restaurant with seating shall be equal to C, where

\[ C = S \times H \times A \]

where, \( S = \) Number of seats, with each drive-in car service space counting as 3 seats and each drive-up service window counting as 50 seats.

\( H = \) Hours per day that meals are served, at least 6 hours but not more than 12 hours.

\( A = \) Appliance factor:

- 0.75 for a kitchen with no dishwashing machine and no food waste grinder.
- 1.0 for a kitchen with either a dishwashing machine or a food waste grinder.
- 1.25 for a kitchen with both a dishwashing machine and a food waste grinder.

b. The minimum capacity of a grease interceptor serving a dining hall, hospital, nursing home, school kitchen, church kitchen or a kitchen for carryout or delivery service shall be equal to C, where:

\[ C = M \times G \times H \]

where, \( M = \) Meals served per day.

\( G = \) 3 gallons per meal served.

\( H = \) Hours per day that meals are served, at least 6 hours but not more than 12 hours.

\( P = \) Meal periods per day; 1, 2 or 3.

c. The minimum capacity of a grease interceptor as determined in subd. 2. a. or b. may be halved for establishments with all paper service, but may not be less than 1000 gallons if the interceptor is to discharge to a private sewage system or less than 750 gallons if the interceptor is to discharge to a municipal sewer system and treatment facility.

3. Installation. a. Grease interceptor tanks may not be located within 5 feet of a building or any portion of the building or swimming pool; 10 feet of a water service; 2 feet of a lot line; 10 feet of a cistern or 25 feet of a reservoir or high water mark of a lake, stream, pond or flowage.

Note: The department of natural resources under ch. NR 113 requires a minimum setback of 25 feet between a grease interceptor and a well.

b. Where a grease interceptor tank is installed in groundwater, the tank shall be adequately anchored.

c. Grease interceptor tanks shall be installed on a bedding of at least 3 inches in depth. The bedding material shall be sand, gravel, granite, limestone or other noncorrosive materials of asize that all will pass through a 3/4 inch sieve.

d. The backfill material for steel and fiberglass grease interceptors shall be as specified in subd. 3. c. for bedding and shall be tamped into place. The backfill material for concrete
grease interceptor tanks shall be soil material, of a size that will pass through a 4 inch screen and shall be tamped into place.

All joints on concrete risers and manhole covers for a grease interceptor shall be tongue and groove or ship lap type and sealed watertight using neat cement, mortar or bituminous compound. All joints on steel risers for a grease interceptor shall be welded or flanged and bolted and be watertight. All steel manhole extensions from a grease interceptor shall be bituminous coated inside and outside. All methods of attaching fiberglass risers for a grease interceptor shall be watertight and approved by the department.

(c) Interior grease interceptors. 1. Flow rating. An interior grease interceptor shall be capable of accommodating a flow of at least 15 gallons per minute, but not less than the manufacturer's specifications.

2. Flow rate related to connected capacity. Three-fourths of the total holding capacity in gallons of all fixtures and devices discharging to an interior grease interceptor, shall not exceed the value of the maximum flow rate which the interceptor can accommodate.

3. Grease holding capacity as related to flow rate. The grease holding capacity in pounds shall not be less than double the value of the maximum flow rate which the interceptor can accommodate.

4. Flow controls. Where required by the manufacturer, devices which control the rate of flow through an interior grease intercept shall be installed.

a. The flow control devices shall be accessible for inspection, service and cleaning.

b. Flow controls shall be installed in the drain branch leading to each fixture and shall be so rated that the combined flow from all combinations of discharge will not develop either sufficient static or velocity head so the established flow rate of the interceptor can be exceeded.

Note: See Appendix for further explanatory material.

5. Flow control vents. Orifice type flow controls for an interior grease interceptor shall be vented in accordance with s. Comm 82.31.

6. Prohibited locations and types. No water-cooled grease interceptor may be installed. No grease interceptor may be located where the surrounding temperatures, under operating conditions, are less than 40°F.

(d) Prohibited treatment. The introduction of grease or fat emulsifiers into a grease interceptor shall be prohibited.

(6) Automatic car washes. The wastes of floor drains and drain inlets of automatic car washes shall discharge through an approved car wash interceptor.

(a) Design. Except as provided in subds. 1. and 2. and par. (b), car wash interceptors shall be constructed and installed in accordance with sub. (4) (a).

1. The interceptor's outlet shall be submerged to form a trap with a water seal of at least 15 inches.

2. The bottom of the trap's water seal shall be at least 30 inches above the bottom of the interceptor.

(b) Capacity. The minimum liquid capacity of the interceptor shall be based on the maximum flow rate of water through the interceptor in gallons per minute.

1. Between the waterline and the bottom of the trap seal of the outlet, the interceptor shall have a capacity equal to at least 5 times the maximum flow rate.

2. Below the bottom of the trap seal of the outlet, the interceptor shall have a capacity equal to at least 15 times the maximum flow rate.

Note: See Appendix for further explanatory material.

(c) Hand-held car washing wands. The wastes of floor drains and drain inlets serving 2 or more hand-held car washing wands shall discharge through an approved car wash interceptor. The wastes of one hand-held car washing wand may discharge to a garage catch basin.

(d) Recirculated water. Where recirculated water is used for washing, the recirculated water shall be drawn from a separate chamber located upstream from the car wash interceptor.

(7) Commercial laundries. Wastes from gravity dump-type clothes washing equipment shall be discharged through an approved laundry interceptor in accordance with this subsection.

(a) Screening apparatus. A laundry interceptor shall be equipped with a wire basket or other device which will prevent the passage of solids, 1/2 inch or larger in diameter, string, buttons and other detrimental materials into the drain system.

(b) Trench type interceptors. A floor receptor, trench or trough as specified in s. Comm 82.33 (9) (c) 3., may serve as a laundry interceptor, if no oils or quantities of sand are discharged into it.

(c) In-line interceptor. 1. In-line interceptors shall have a minimum inside diameter or horizontal dimension of 24 inches.

2. An in-line interceptor shall be provided with an air-tight cover.

3. An in-line interceptor shall be provided with a vent.

a. The vent shall extend from above the flow line to a vent terminal in accordance with s. Comm 82.31 (16) or shall be connected to the venting system serving the sanitary drain system.

b. The diameter of the vent shall be at least one-half of the diameter of the interceptor's outlet, but not less than 2 inches.

4. The outlet for an in-line interceptor shall be at least 4 inches in diameter. The outlet shall be submerged to form a trap with a water seal of at least 12 inches. The bottom of the trap's water seal shall be at least 12 inches above the bottom of the interceptor.

5. The waterline in an in-line interceptor shall be at least 2 inches below the bottom of the inlet opening for the interceptor.

(b) Oil and flammable liquids. Oil and flammable wastes discharging to a building sewer shall be discharged through an approved interceptor. Where oily and flammable wastes may overflow by spillage or other circumstances, protective dike or other similar devices shall be provided to prevent the wastes from entering the drain system.

(a) Site-constructed interceptors. 1. Garage catch basins. Site-constructed garage catch basins which serve as an interceptor for oily or flammable wastes shall be constructed and installed in accordance with sub. (4).

2. In-line interceptors. Site-constructed in-line interceptors for oily or flammable wastes shall be constructed and installed in accordance with this subdivision.

a. The base for an in-line interceptor shall extend at least 4 inches beyond the outside of the interceptor.

b. The in-line interceptor shall have a minimum inside diameter or horizontal dimension of 36 inches and a minimum inside depth of 48 inches. The interceptor shall have a minimum liquid capacity of one cubic foot for each 300 square foot of surface area to be drained into the interceptor.

c. The outlet for an in-line interceptor shall be at least 4 inches in diameter. The outlet shall be submerged to form a trap with a water seal of at least 6 inches. The bottom of the trap's water seal shall be at least 18 inches above the bottom of the interceptor.

d. The drain from the in-line interceptor shall be provided with a cleanout extended to grade. The cleanout shall be sized in accordance with s. Comm 82.35.

e. The waterline in the in-line interceptor shall be at least 2 inches below all horizontal drains discharging into the interceptor.

f. Covered in-line interceptors shall be vented in accordance with par. (e).

(b) Prefabricated oil interceptors and separators. Prefabricated oil interceptors and separators shall be of a capacity for the anticipated load and shall be installed in accordance with the
manufacturer's written specifications. A manufacturer's rated capacity shall be accepted upon the approval of the department.

1. An oil interceptor or separator shall be provided with an oil storage-tank for storing the residue from the interceptor or separator.

2. The oil storage tank shall be provided with a high liquid warning device which will be activated when the liquid level is less than 6 inches below the inlet pipe.
   a. The warning device shall be either an audible or illuminated alarm.
   b. Illuminated alarms shall be conspicuously mounted.

(c) Venting. Oil and flammable interceptors and separators shall be so designed to prevent the accumulation of explosive gases.

1. A covered interceptor or separator shall be provided with an individual vent of at least 6 inches in diameter. The vent shall extend from the top of the separator or separator as high as possible, from the side of the separator or separator to a point at least 12 feet above grade.

2. The drain pipe to the separator or separator shall be provided with a fresh air inlet connected within 2 feet of the inlet of the separator or separator. The fresh air inlet shall terminate at least one foot above grade, but not less than 6 feet below the terminating elevation of the vent serving the separator or separator.

The fresh air inlet shall be at least 3 inches in diameter.

Note: See Appendix for further explanatory material.

(9) Bottling Establishments. Wastes containing glass of bottling establishments shall be discharged through an interceptor.

(10) Dairy Product Processing Plants. Dairy wastes from dairy product processing plants shall be discharged through an interceptor.

(11) Meat Processing Plants and Slaughterhouses. The wastes from meat processing areas, slaughtering and meat dressing rooms shall be discharged through an approved interceptor to prevent the discharge of feathers, entrails, blood and other materials.

(12) Sand Interceptors. Sand interceptors and other similar interceptors for heavy solids shall be so designed and located as to be accessible for cleaning. The outlet for the separator shall be submerged to form a trap with a water seal of at least 12 inches.

(13) Plaster and Heavy Solids Trap Type Interceptors. Plaster sinks shall be provided with plaster and heavy solids trap type interceptors.
   a. The separator shall be installed as the fixture trap.
   b. The drain piping between the sink and the separator shall not exceed a length of 36 inches.

Note: See Appendix for further explanatory material.

(14) Chemical Waste Piping Systems. All chemical wastes having a pH level of less than 2.5 or more than 10.0 shall discharge to a holding tank for proper disposal or to a drain system in accordance with this subsection.

(a) Chemical Dilution and Neutralizing Basins. 1. All chemical wastes discharging into a drain system shall be diluted, neutralized or treated to a pH level of 5.5 to 10.0 by passing through an approved dilution or neutralizing basin before discharging to a building sewer.

2. Dilution and neutralizing basins shall have the minimum retention capacities as specified in Table 82.34. For quantities of fixtures exceeding 150 sinks or for special uses or installations, the department shall be consulted as to the minimum capacity of the basin.

3. Where a sufficient supply of diluting water cannot be provided to a dilution or neutralizing basin, the basin shall be filled with marble or limestone chips of not less than one inch nor more than 3 inches in diameter to be level of the basin's outlet.

4. Either the inlet or outlet of a dilution or neutralizing basin shall be submerged to form a trap with a water seal of at least 4 inches.

(b) Vents. Vents for chemical waste systems shall be sized and installed in accordance with s. Comm 82.31.

1. Dilution and neutralizing basins with submerged inlets shall have a sanitary vent connected to the basin and a chemical waste vent connected to the inlet pipe. The pitch and the developed length of the drain between the submersed basin inlet and the chemical waste vent shall be in accordance with Table 82.31.1.

2. Dilution and neutralizing basins with submersed outlets shall have a chemical waste vent connected to the basin and a sanitary vent connected to the outlet pipe. The pitch and the developed length of the drain between the submersed basin outlet and the sanitary vent shall be in accordance with Table 82.31.1.

Notes: See Appendix for further explanatory material.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85; am. (4) (a) 2, b, (5) (b) 2, intro., c and (e) 4, b, Register, August, 1991, No. 428, eff. 9-1-91; am. Comm 82.35 Cleanouts. (1) Scope. The provisions of this section set forth the requirements for the installation of cleanouts and manholes for all drain piping.

(2) Materials. Cleanouts shall be constructed of approved materials in accordance with ch. Comm 84.

(3) Where Required. (a) Horizontal drains. All horizontal drains within or under a building shall be accessible through a cleanout. Cleanouts shall be located so that the developed length of drain piping between cleanouts does not exceed 75 feet. For the purpose of this requirement, cleanouts in drain stacks may serve horizontal drains.

Note: See Appendix for further explanatory material.

(b) Sanitary building sewers. 1. Sanitary building sewers 6 inches or less in diameter shall be provided with cleanouts or manholes such that:
   a. Cleanouts are located not more than 100 feet apart;
   b. Manholes are located not more than 400 feet apart;
   c. The distance from a cleanout to a manhole located upstream is not more than 200 feet;
   d. The distance from a manhole to a cleanout located upstream is not more than 300 feet.

2. Sanitary building sewers 8 inches or larger in diameter shall be provided with manholes at:
   a. Every change in direction of 45° or more;
   b. Every change in pipe diameter; and
   c. Intervals of not more than 400 feet.
(c) Storm building sewers. 1. Storm building sewers 10 inches or less in diameter shall be provided with cleanouts or manholes such that:
   a. Cleanouts are located not more than 100 feet apart;
   b. Manholes are located not more than 400 feet apart;
   c. The distance from a cleanout to a manhole located upstream is not more than 200 feet; or
   d. The distance from a manhole to a cleanout located upstream is not more than 300 feet.
2. Storm building sewers 12 inches or larger in diameter shall be provided with manholes or storm drain inlets with an inside diameter of at least 36 inches at:
   a. Every change in direction of 45° or more;
   b. Every change in pipe diameter; and
   c. Intervals of not more than 400 feet.
(d) Private interceptor main sewers. 1. Private interceptor main sewers 5 inches or less in diameter shall be provided with a cleanout or manhole at the most upstream point of the private interceptor main sewer and such that:
   a. Cleanouts are located not more than 100 feet apart;
   b. Manholes are located not more than 400 feet apart;
   c. The distance from a cleanout to a manhole located upstream is not more than 200 feet; or
   d. The distance from a manhole to a cleanout located upstream is not more than 300 feet.
2. Private interceptor main sewers 6 inches or larger in diameter shall be provided with a manhole at:
   a. The most upstream point of the private interceptor main sewer;
   b. Every change in direction;
   c. Every change in pipe diameter; and
   d. Intervals of not more than 400 feet.
(e) Junction of building drain and building sewer. A cleanout shall be provided near the junction of a building drain and a building sewer.
1. The cleanout shall be located within 5 feet of where the building drain and the building sewer connect. The cleanout may be located either inside or outside the building.
2. A cleanout in a drain stack may serve as the cleanout at the junction of the building drain and building sewer, if the stack is within 5 feet of where the building drain and building sewer connect.
(f) Stacks. Where a cleanout is provided in a drain stack, the cleanout shall be located 28 to 60 inches above the lowest floor penetrated by the stack.
(g) Branches. Cleanouts shall be provided in connection with batteries of fixtures at such points that all parts of the branch drain pipes may be reached for cleaning or removal of stoppages. For the purposes of this requirement, removable fixture traps may serve as a cleanout opening.
(h) Greasy wastes. Drain pipes carrying greasy wastes shall be provided with cleanouts located not more than 40 feet apart and at all changes in direction of more than 45°.
(i) Double sanitary tees. A cleanout shall be provided immediately above or below a double sanitary tee drain fitting which is installed in a vertical drain pipe of less than 3 inches in diameter, unless a stack cleanout is provided in accordance with par. (f).
(j) Traps and fixture drains. 1. All traps shall be constructed or installed so that stoppages may be removed from the traps and the horizontal portions of fixture drains.
2. If a trap is not accessible for removal or does not contain a removable dip, a cleanout or a removable inlet shall be installed to enable cleaning of the trap passageway and the horizontal portions of the fixture drain.
(k) Conductors. Where a cleanout is provided in a conductor, the cleanout shall be located 28 to 60 inches above the lowest floor penetrated by the conductor.
(l) Sampling manholes. Municipalities or sanitary sewage districts by ordinance or rule may require the installation of sampling manholes for periodic sewage monitoring.
Note: The installation of sampling manholes may be required for the monitoring of industrial wastes under chs. NR 200 to 299. See Appendix for further explanatory material.
(4) Direction of flow. Every cleanout shall be installed so as to open in the direction of the waste flow or at a right angle thereto.
(5) Accessibility. Cleanout plugs shall not be covered with cement, plaster, or any other similar permanent finishing material.
(a) Underground piping. Cleanouts installed in underground drain piping shall be extended vertically to or above the finish grade.
1. The cleanout extension to grade shall connect to the drain piping through a wye pattern fitting.
2. A cleanout located outside of a building shall be provided with a frost sleeve.
   a. The frost sleeve shall be of a material approved for building sewers in accordance with s. Comm 84.30 (2) (c).
   b. Where a cleanout is located in an area subject to vehicular traffic the top of the frost sleeve shall terminate in a concrete pad at least 4 inches thick and extending at least 9 inches from the sleeve on all sides, sloping away from the sleeve.
   c. The bottom of the frost sleeve shall terminate 6 to 12 inches above the top of the drain piping or at least 6 inches below the predicted frost depth in accordance with s. Comm 82.30 Table 82.30-6.
   d. The frost sleeve shall have a removable watertight top of sufficient thickness and strength to sustain the weight of anticipated traffic.
Note: See Appendix for further explanatory material.
(b) Concealed piping. Cleanout access for drain piping located in concealed spaces shall be provided by either extending the cleanout to at least the surface of a wall or floor or by providing access panel of a sufficient size to permit removal of the cleanout plug and proper cleaning of the pipe.
(6) Cleanout size. Cleanouts and cleanout extensions shall be sized in accordance with Table 82.35.
(7) Prohibited use of cleanout openings. Cleanout openings shall not be used for the installation of fixtures or floor drains, except where another cleanout of equal access and capacity is provided.
(8) Manholes. (a) Diameter. The minimum diameter of manholes shall be 42 inches. A manhole shall have a minimum access opening of 24 inches.
(b) Materials. Manholes shall be constructed of approved materials in accordance with ch. Comm 84 and in accordance with the design provisions of s. NR 110.13.
Note: The provisions of NR 110.13 regarding the manhole's flow channel, watertightness, and drop pipe indicate the following specifications:
—The flow channel through manholes shall be made to conform to the shape and slope of the sewer.
—Solid watertight manhole covers are to be used wherever the manhole tops may be flooded by street runoff or high water. Where groundwater conditions are unfavorable, manholes of brick or block shall be waterproofed on the exterior with plastic coatings supplemented by a bituminous waterproof coating or other approved coatings. Inlet and outlet pipes are to be joined to the manhole with a gasketed flexible watertight connection or any watertight connection arrangement that allows differential settlement of the pipe and manhole wall to take place.
—An outside drop pipe is to be provided for sewer entering a manhole where the invert elevation of the center sewer is 2 feet or more above the spring line of the outgoing sewer. The entire drop connection shall be encased in the concrete. Inside drop connection may be approved on a case-by-case basis.
Note: See Appendix for further explanatory material.

Comm 82.36 Storm and clear water drain systems.

1. **SCOPE.** The provisions of this section set forth the requirements for the design and installation of storm and clear water drain systems including storm building drainages and sewers.

2. **MATERIALS.** All storm and clear water drain systems shall be constructed of approved materials in accordance with ch. Comm 84.

3. **DISPOSAL.** (a) Storm sewer. Storm water, surface water, groundwater and clear water wastes shall be discharged to a storm sewer system or a combined sanitary–storm sewer system where available. Combined public sanitary–storm sewer systems shall be approved by the department of natural resources. Combined private sanitary–storm sewer systems shall be approved by the department.

   (b) Other disposal methods. 1. Where no storm sewer system or combined sanitary–storm sewer system is available or adequate to receive the anticipated load, the final disposal of the storm water, surface water, groundwater or clear water wastes shall be discharged in accordance with local governmental requirements. If the final disposal of such wastes or water is by means of subsurface discharge, documentation shall be submitted to this department to determine whether the method of disposal is acceptable.

   2. Where approved by the local governmental authority, storm water, surface water, groundwater and clear water wastes of the properties of one- and 2-family dwellings may be discharged onto flat areas, such as streets or lawns, so long as the water flows away from the buildings and does not create a nuisance.

   3. The clear water waste from a drinking fountain, water heater relief valve, storage tank relief valve, water softener, iron filter, or floor drain or water testing sink within a municipal well pump house shall be discharged to either a sanitary drain system or a storm drain system.

   4. The clear water wastes from equipment other than those listed in subd. 3, may be discharged to a sanitary drain system which connects to a publicly owned treatment works, if not more than 20 gallons of clear water wastes per day per building are discharged.

   (c) Segregation of wastes. 1. a. Except as provided in subd. 1, b, where a sanitary sewer system and a storm sewer system are available, the drain piping for storm water or clear water wastes may not connect to any part of the sanitary drain system.

   b. Where a combined sanitary–storm sewer system is available storm water wastes, clear water wastes and sanitary wastes may not be combined until discharging to the building sewer.

   2. Storm water wastes and clear water wastes shall not be combined until discharging into the storm building drain.

4. **LOAD ON DRAIN PIPING.** (a) Storm water drainage. The load factor on storm water drain piping shall be computed in terms of gallons per minute or on the square footage of the horizontal projection of roofs, paved areas, yards and other tributary areas.

   (b) Continuous flow devices. Where there is a continuous or semicontinuous discharge into the storm building drain or storm building sewer, as from a pump, air conditioning unit, or similar device, each gallon per minute of such discharge shall be computed as being equivalent to 26 square feet of roof area.

5. **SELECTING SIZE OF STORM AND CLEAR WATER DRAIN PIPING.** (a) Horizontal storm water drain piping. The pipe size for horizontal drain piping for storm water shall be determined from Tables 82.36–1 to 82.36–4.

   (b) Vertical conductors for storm water. 1. A vertical conductor for storm water shall not be smaller than the largest horizontal branch connected thereto.

   2. Vertical conductors shall be sized in accordance with Table 82.36–5 or the diameter D, where

   \[ D = 1.128 \sqrt{\frac{A}{X}} \]

   where, \( A \) = the area of the roof in square feet

   \( X \) = 300 square feet per square inch for a roof covered with gravel or slag and with a pitch not exceeding 1/4 inch per foot; or

   = 250 square feet per square inch for a roof covered with gravel or slag and with a pitch of greater than 1/4 inch per foot; or

   = 200 square feet per square inch for a roof with a metal, tile, brick or slate covering and of any pitch.

(c) Clear water drain piping. Drain piping for clear water shall be sized in accordance with s. Comm 82.30 (3) and (4).

Note: Divide square footage by 104 to obtain flow in gpm.

(d) Minimum size of underground drain piping. Any portion of a storm or clear water drain system installed underground shall not be less than 2 inches in diameter. Underground drain piping which is 2 inches in diameter shall not exceed a length of 20 feet.

(e) Minimum size of storm building sewers. The pipe size for storm building sewers shall be determined from Tables 82.36-1 to 82.36-4. Storm building sewers serving combined storm water and clear water wastes shall be sized in accordance with Table 82.36-4.

1. Gravity flow sewers. 1. The minimum size of a gravity flow storm building sewer shall be 3 inches in diameter between the building and lot line and 4 inches in diameter between the lot line and public sewer or private interceptor main sewer. A municipality or sanitary district by ordinance may require that portion of the storm building sewer between the lot line and public sewer or private interceptor sewer to be larger than 4 inches in diameter.

b. A gravity flow storm building sewer shall not be smaller than any storm building drain connected thereto, except a decrease in diameter in the direction of flow will be permitted if the increase in slope is sufficient to maintain the volume rate of flow. A reduction in diameter for the storm building sewer shall be made in a manhole.

2. Pressurized or forced sewers. Pressurized storm building sewers shall be not less than 3 1/4 inches in diameter.

(6) Pitch of horizontal drain piping. All horizontal drain piping shall be installed at a pitch which will produce a computed velocity of at least one foot per second when flowing full.

(a) Storm water drain piping. The minimum pitch of horizontal drain piping shall be in accordance with Tables 82.36-1 to 82.36-4.

(b) Clear water drain piping. The minimum pitch of horizontal clear water drain piping less than 3 inches in diameter shall be 1/8 inch per foot. The minimum pitch of horizontal drain piping 3 inches or larger in diameter shall be 1/16 inch per foot.

(7) Changes in direction of flow. Changes in direction of flow for storm and clear water drain piping shall be in accordance with s. Comm 82.30 (8).

(8) Drainage fittings and connections. Drain piping fittings and connections shall be in accordance with s. Comm 82.30 (9).

(9) Stack offsets. Stack offsets in clear water drain piping shall comply with s. Comm 82.30 (6).
(10) Fixture branch connections near base of stack. Branch drains from interior clear water inlets shall not connect downstream from the base fitting or fittings of a dartin stack or conductor within the distance equal to 20 pipe diameters of the building drain.

(11) Sumps and pumps. (a) Sump. 1. General. All storm building subdrains shall discharge into a sump, the contents of which shall be automatically lifted and discharged into the storm drain system.

2. Construction and installation. a. Except as specified in subd. 2. b., the sump shall have a rim extending at least one inch above the floor immediately adjacent to the sump. The sump shall have a removable cover of sufficient strength for anticipated loads. The sump shall have a solid bottom.

b. Where the sump is installed in an exterior meter pit or elevator pit, the rim shall be level with the floor.

3. Location. All sumps installed for the purpose of receiving clear water, basement or foundation drainage water shall be located at least 15 feet from any water well.

4. Size. The size of each clear water sump shall be as recommended by the sump pump manufacturer, but may not be smaller than 16 inches in diameter at the top, 14 inches in diameter at the bottom, and 22 inches in depth.

5. Removable covers. a. Except as specified in subd. 5. b., penetrations through the top of removable sump covers shall be limited to those for the electrical supply, the vent piping and the discharge piping for the pump or pumps.

b. A sump installed in an exterior meter pit or an elevator pit may be provided with an open grate cover.

Note: In accordance with s. 18.21, a sump may not be located in an elevator machine room.

(b) Sump pump systems. 1. Pump size. The pump shall have a capacity appropriate for anticipated use.

2. Discharge piping. Where a sump discharges into a storm building drain or sewer, a free flow check valve shall be installed.

(12) Subsoil drains. Where a subsoil drain for a building is subject to backwater, it shall be protected by an accessible backwater valve or a sump with pump. Subsoil drains may discharge into an area drain, drain tile receiver or a sump with pump.

(13) Storm building drains and sewers. (a) Limitations. No storm building sewer or private interceptor main storm sewer may pass through or under a building to serve another building, unless:

1. The storm building sewer or private interceptor main storm sewer serves farm buildings or farm houses or both which are all located on one property; or

2. A petition for variance is granted under s. Comm 82.20 (11). The approval or nonapproval of a petition for variance request relative to this paragraph shall be determined on an individual basis and shall be evaluated on site specific conditions including, at least, whether:

a. The storm building sewer or private interceptor main storm sewer serves only buildings which are all located on one property;

</tbody>
</table>

Note: Divide square footage by 26 to obtain flow in gpm.

b. The functions or operations of the buildings to be served by the building sewer or interceptor main sewer are related; or

c. A document, which indicates the piping and distribution arrangement for the property end buildings, will be recorded with the register of deeds.

(b) Extensions to grade. 1. The connection of a storm water leader discharging to a storm building sewer shall be made above the finished grade.

2. The diameter of the drain piping connecting a storm water leader to a storm building drain or sewer shall be in accordance with sub. (5).

(c) Other requirements. 1. Elevation. The elevation of storm building drains shall comply with s. Comm 82.30 (11) (b) 1.

2. Backflow protection. Storm building drains subject to backflow or backwater shall be protected in accordance with s. Comm 82.30 (11) (b) 2.

3. The location of storm building drains and building sewers shall be in accordance with s. Comm 82.30 (11) (d).

4. Storm building drains and building sewers shall be installed in accordance with s. Comm 82.30 (11) (e).

5. Storm building sewers shall be connected to main sewers in accordance with s. Comm 82.30 (11) (f).

(14) Wastes. (a) Traps shall be required for interior drain inlets receiving clear water wastes.

(b) Traps shall not be required for roof drains or exterior area drains for storm water waste, unless the drain inlet is located within 10 feet of an air inlet, door or operable window. Where a trap is required, the trap may be located inside the building. More than one drain inlet may discharge to the same trap.

c. Where a subsoil drain discharges by gravity to a storm sewer the drain shall be trapped. Such a trap shall be provided with a cleanout.

(15) Vents. (a) A trap receiving clear water wastes shall be vented in accordance with s. Comm 82.31. Vent piping for a clear water drain system shall not be connected to a vent system serving a sanitary drain system or chemical waste system.

(b) Vents shall not be required for traps which receive only storm water or groundwater wastes.

(16) Interior drain inlets. Interior clear water drain inlets shall terminate at least one inch above the finished floor.

(17) Area drain inlets. (a) Drain inlet design and construction. 1. General. Storm water area drain inlets shall be constructed in a watertight and substantial manner of approved materials in accordance with ch. Comm 84.

2. Inlet base. All site-constructed storm water area drain inlets subject to vehicular traffic shall be set on a 6 inch thick air-entrained concrete base with a minimum estimated compressive
strength at 28 days of 3000 psi or on an approved precast concrete back.  

3. Size. The size of masonry or concrete inlet basins shall be in accordance with subd. 3. a. and b.

a. Inlet basins 36 inches or less in depth shall have a minimum inside diameter of 24 inches. Basins shall be provided with an open bar grate not less than 18 inches in diameter.  

b. Inlet basins with a depth greater than 36 inches shall have a minimum inside diameter of 36 inches. Basins shall be provided with an open bar grate not less than 24 inches in diameter.  

4. Inlet grates. All inlets shall have an approved, well-fitted, removable cast iron or steel grate of a thickness and strength to withstand anticipated loads. The grate shall have an available inlet area equal to or greater than the required waste outlet of the inlet.  

Note: See Appendix for further explanatory material.

(b) Subsurface areas of 50 square feet or less. All subsurface areas, exposed to the weather, other than stairwells, with areas not exceeding 50 square feet shall be drained. These areas may drain to subsurface drains through a minimum 2 inch diameter pipe or a continuous layer of gravel or may drain to the storm building drain, storm subdrain, or storm sewer: through a minimum 3 inch diameter pipe.

(c) Subsurface areas of more than 50 square feet and stairwells. An area drain shall be provided in subsurface areas, greater than 50 square feet in area, and all stairwells which are exposed to the weather. These areas shall be drained to the storm building drain, storm subdrain or storm sewer. If no storm sewer exists, the discharge shall be in accordance with sub. (3) (b). The fixture drain shall have a minimum inside diameter of 3 inches and shall not discharge into a subsurface, footing or foundation drain.

18 Roof drains. (a) General roofs. Roof drains shall be equipped with strainers extending not less than 4 inches above the surface of the roof; immediately adjacent to the roof drain. Strainers shall be of an available strainer above the roof of not less than 1/2 times the area of the conductor to which the drain connects.

(b) Flat decks. Roof drain strainers for use on sun decks, parking decks and similar areas may be of the flat surface type level with the deck, and shall have an available inlet area not less than twice the area of the conductor to which the drain connects.

19 Controlled flow roof drain systems. (a) Application. In lieu of sizing the roof storm drain piping on the basis of actual maximum horizontal projected roof areas as specified in sub. (4), the roof drain piping may be sized based on the equivalent adjusted maximum horizontal projected roof areas which result from controlled flow and storage of storm water on the roof.

Note: See chs. 53.11 (6) (a) 4. and 53.11 (6) (b) subd. 2. and 3. as provisions relating to the structural design of the roof for controlled flow drain systems.

(b) Installation. Control of storm water runoff shall be by control devices. Control devices shall be protected by strainers.

(c) Sizing. Not less than 2 drains shall be installed in roof areas 10,000 square feet or less and at least 4 drains in roofs over 10,000 square feet in area.

History: Cr. Register, February, 1985, No. 350, eff. 3-1-85; r. and recr. (3) (a) and (b) 1. (c) 1. and (11) (a) 4. cr. (3) (c) 6. , Register, May, 1988, No. 389, eff. 6-1-88; remum. (3) (b) 3. a. to be (13) (b) 3. and (3) (b) 3. b. to be (30) (b) 4. , Register, April, 2000, No. 532, eff. 7-1-00.

22.37 Sanitation facilities. (1) COMPOSTING SYSTEMS. (a) Composting systems which employ water or other liquids as a transport medium for wastes shall conform with this subsection.

Note: Composting systems where water or other liquids are not employed as a transport medium are addressed under ch. Comm 91.

(b) The materials, design, construction and performance of a composting system which employs water or other liquids as a transport medium for wastes shall conform to NSF Standard 41.

(c) All composting systems shall be listed by a testing agency acceptable to the department.

Note: Listing agencies acceptable to the department include the American Gas Association; Canadian Standards Association; NSF International; Underwriter’s Laboratories; and Warnock Hersey.

(d) 1. Components for the storage or treatment of wastest shall be continuously ventilated.

2. Ventilation ducts or vents for the composting system shall conform to s. Comm 82.31 (16).

(e) 1. The disposal of the end product from a composting system shall be in accordance with 40 CFR Part 503, Standards for the Use or Disposal of Sewage Sludge.  

2. The disposal of any liquid from a composting system shall be either to a publicly owned treatment works or a POWTS conforming to ch. Comm 83.

(f) The connection of potable water supplies to a composting system shall be protected in accordance with s. Comm 82.41.

(g) The drainage systems for the composting system shall conform to the applicable requirements of s. Comm 82.30 to 82.36 and the manufacturer’s specifications.

2) SANITARY DUMP STATIONS. (a) Sanitary dump stations which are used to receive domestic wastes and domestic wastewater from the holding tanks of travel trailers, recreational vehicles or other similar mobile vehicles, and transfer containers shall conform with this subsection.

(b) The drain receptor for a sanitary dump station shall be at least 4 inches in diameter.

(c) 1. The drain receptor shall be provided with a self-closing cover.

2. The cover for the drain receptor shall be operable without touching the cover with one’s hands.

(d) The drain receptor shall be surrounded by an impervious pad at least 6 feet in diameter. The pad shall be:

1. Pitched toward the drain receptor with a minimum slope of 1/4 inch per foot; and

2. Of sufficient strength to sustain anticipated loads.

(e) The drain receptor shall be trapped in accordance with s. Comm 82.32.

(f) The drain receptor for a sanitary dump station that is installed within an enclosed structure shall be vented in accordance with s. Comm 82.31.

(g) A supply of water shall be provided to wash down the drain receptor and pad. The water supply shall be:

1. Provided with cross connection control in accordance with s. Comm 82.41; and

2. Labeled indicating that the supply is not for drinking purposes.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Subchapter IV — Water Supply Systems

Comm 82.40 Water supply systems. (1) SCOPE. The provisions of this section set forth the requirements for the design and installation of water supply systems.

Note: Chapter NR 811 governs the design and construction of community water systems or waterworks.

(2) MATERIALS. All water supply systems shall be constructed of approved materials in accordance with ch. Comm 84.

(3) GENERAL. (a) Potable water required. Every piece of equipment used in the preparation or processing of food, medical or pharmaceutical products and every plumbing fixture and appliance which demands a supply of water shall be provided with only potable water.

(b) Hot water required. Except as provided in subds. 1. and 2., hot water shall be provided to all plumbing fixtures, appliances
and equipment used for personal washing, culinary purposes or laundering.

1. Lavatories, wash fountains and shower heads which are not located in dwelling units or living units shall be supplied with either tempered water or hot water.

a. Tempered water shall be provided to lavatories, wash fountains and shower heads by means of tempering mixing valves.

b. Lavatories located in park shelters and bath houses which are not open during the period from November 15 to March 15 and which are not places of employment shall not be required to be provided with hot water.

2. Lavatories located in waysides which are not places of employment shall not be required to be provided with hot water.

Note: The exception of providing hot water under subd. 1, to 3, does not supersede the requirements of other state agencies for providing hot water.

(c) Protection. 1. Pursuant to s. NR 811.09 (2) the interconnection of two or more water supply systems, one system served by a public supply source and the other system served by another supply source is prohibited, unless approved in writing by the department of natural resources.

2. A water supply system shall be designed and installed in accordance with s. Comm 82.41 and maintained to prevent non-potable liquids, solids or gases from being introduced into the potable water supply system through cross connections.

(d) Identification. 1. Where a building or a structure is served by a nonpotable water distribution system and a potable water distribution system, each distribution system shall be identified in accordance with this subdivision.

a. All above ground piping supplying nonpotable water shall be identified nonpotable by tags or yellow bands. The yellow bands shall be at least 3 inches wide.

b. All above ground piping supplying potable water shall be identified potable by tags or green bands. The green bands shall be at least 3 inches wide.

c. The tags or colored bands identifying nonpotable water and potable water piping shall be placed at intervals of not more than 25 feet and at each side where the piping passes through a wall, floor or roof.

d. All valves and outlets supplying nonpotable water shall be identified nonpotable by tags.

e. All valves, except fixture stop valves, supplying potable water shall be identified potable by tags.

f. Tags used to identify nonpotable water outlets, valves and piping shall be of metal or plastic in the shape of an equilateral triangle with 4 inch sides and bearing the legend "water unsafe" or other similar wording approved in writing by the department. The lettering on the tags shall be raised or indented and at least 1/2-inch in height.

g. Tags used to identify potable water valves shall be of metal or plastic in the shape of a 3-inch diameter circle bearing the legend "safe water" or other similar wording approved in writing by the department. The lettering on the tags shall be raised or indented and at least 1/2-inch in height.

2. Where a building or a structure is served by 2 distribution systems, one system supplied by a public water supply and the other system supplied by a private well, each water distribution system shall be identified to indicate the supply source.

2. Metering. When a water meter is provided pursuant to s. Comm 83.54 (2) the water meter shall:

1. Be installed in the water supply system so as to exclude the supply to those water outlets, such as exterior hose bibs and wall hydrants, which do not discharge to the sanitary drain system; and

2. Include an accessible remote reader device located on the exterior of the building or structure.

Note: Section Comm 83.54 (2) requires metering when a new building or a new structure is to be served by a holding tank for domestic wastewater disposal.

(f) Multipurpose piping system. 1. Except as provided in subd. 2, a multipurpose piping system shall be designed and installed in accordance with this section and NFPA 13D.

Note: Pursuant to this subdivision and sub. (2), materials for multipurpose piping systems need to be acceptable under the NFPA 13D standard and s. Comm 44.30 Table S-30-9.

2. Fire department connections are prohibited in a multipurpose piping system.

b. Sections 2–3 (b), 2–3 (d), 3–6, 4–1.4.1, 4–1.4.2, 4–4.2 Exception No. 2 (h), 4–6, 5–3.2, 5–4.3 and 5–5 of NFPA 13D do not apply in Wisconsin.

c. The following wording is substituted for section 5–4.4 of NFPA 13D: The minimum distance between sprinklers shall be 6 feet.

(4) Control valves. (a) Private water mains. Private water mains shall be provided with control valves as specified in this subsection.

1. Corporation cocks. a. If a private water main 2 inches or less in diameter connects to a public water main, a corporation cock shall be installed at the connection to the public water main.

b. If a private water main 2–1/2 inches or larger in diameter connects to a public water main, a corporation cock shall be installed not more than 8 feet from the connection to the public water main.

2. Curb stops. a. Except as provided in subd. 2, b., if a private water main connects to public water main, a curb stop shall be installed in the private water main between the corporation cock and the property line.

b. If a private water main 2–1/2 inches or larger in diameter connects to a public water main, one control valve may serve as the corporation cock and the curb stop. The control valve shall be located not more than 8 feet from the connection to the public water main.

3. Building control valves. If a water service serves a building, a building control valve shall be provided in the water service as specified in this subsection.

a. If the water service connects to a public water supply or to a private water supply which has an external pressure tank, the building control valve shall be installed inside the building and located within 3 feet of developed length from the point where the water service first enters the building. If a water meter is provided, the building control valve shall be located upstream of the water meter.

b. If a private water supply includes an internal pressure tank, the building control valve shall be installed inside the building and located within 3 feet of developed length downstream from the internal pressure tank.

Note: See Appendix for further explanatory material.
(c) **Water distribution systems.** 1. Control valves shall be installed in water distribution systems serving public buildings as specified in this subdivision.

   a. If a water meter is provided, a control valve shall be installed within 3 feet of developed length downstream from the outlet of the water meter. If bypass piping is provided around a water meter, a control valve shall be installed in the bypass piping.

   Note: See sub. (8) (d) 3. for the requirements relating to the bypassing of water meters.

   b. A control valve shall be installed in the supply piping to each water heater and water treatment device and in the fixture supply to each plumbing fixture, plumbing appliance and piece of equipment.

   c. If a hot water circulation system is provided, a control valve shall be installed on both the inlet and outlet piping to the circulation pump. If a hot water circulation system has 2 or more return pipe lines, a balancing control valve shall be installed in each return piping line.

   d. The water distribution system for buildings with more than 4 dwelling units or living units shall be provided with control valves in such numbers and at such locations so that the water supplied to all the units within the building can be isolated into groups of 4 of less units.

   Note: See sub. (8) (g) for the valve requirements for water temperature control.

2. Control valves shall be installed in water distribution systems serving one- and two-family dwellings as specified in this subdivision.

   a. If a water meter is provided, a control valve shall be installed within 3 feet of developed length downstream from the outlet of the water meter. If bypass piping is provided around a water meter, a control valve shall be installed in the bypass piping.

   Note: See sub. (8) (d) 3. for the requirements relating to the bypassing of water meters.

   b. A control valve shall be installed in the supply piping to each water heater and water treatment device and in the fixture supply to each water closet, exterior hose bibb, plumbing appliance and piece of equipment.

   c. If a hot water circulation system is provided, a control valve shall be installed on both the inlet and outlet piping to the circulation pump. If a hot water circulation system has 2 or more return pipe lines, a balancing control valve shall be installed in each return piping line.

(5) **Hot water supply systems.** (a) **General.** Water heating systems shall be sized to provide sufficient hot water to supply both the daily requirements and hourly peak loads of the building.

   Note: See Appendix for further explanatory materials regarding insulation requirements for storage tanks and recirculation piping.

   (b) **Temperature maintenance.** If the developed length of hot water distribution piping from the source of the hot water supply to a plumbing fixture or appliance exceeds 100 feet, a circulation system or self-regulating electric heating cable shall be provided to maintain the temperature of the hot water within the distribution piping.

1. If a circulation system is used to maintain the temperature, no uncirculated hot water distribution piping may exceed 25 feet in developed length.

2. If a self-regulating electric heating cable is used to maintain the temperature, the cable shall extend to within 25 feet of each fixture or the appliance.

3. Water distribution piping conveying circulated water or served by a self-regulating electric heating cable shall be insulated to limit the heat loss at the external surface of the pipe insulation to a maximum of 25 BTUs per hour per square foot for aboveground piping and 35 BTUs per hour per square foot for underground piping. The maximum heat loss shall be determined at a temperature differential, T, equal to the maximum water temperature minus a design ambient temperature no higher than 65°F.

4. Water distribution piping served by self-regulating electric heating cable shall be identified as being electrically traced in accordance with ch. Comm. 16.

5. The installation of self-regulating electric heating cable may be subcontracted by a plumber to another trade.

Note: See s. Comm. 63.29 for pipe insulation requirements.

(c) **Water heaters.** All water heaters and safety devices shall be designed and constructed in accordance with s. Comm. 84.20 (5) (n).

Note: Water heater sizes are to be installed in accordance with the requirements specified in ch. Comm. 50 to 64 and Comm. 20 to 25 with respect to enclosures and venting.

(d) **Safety devices.** Water heaters shall be equipped with safety devices as specified in this paragraph.

1. All pressurized storage-type water heaters and uninfired hot water storage tanks shall be equipped with one or more combination temperature and pressure relief valves. The temperature steam rating of a combination temperature and pressure relief valve or valves shall equal or exceed the energy input rating in BTU per hour of the water heater. No shut off valve or other restricting device may be installed between the water heater or storage tank and the combination temperature and pressure relief valve.

   Note: The temperature steam rating of a combination temperature and pressure relief valve is commonly referred to as the AGA temperature steam rating.

2. All pressurized non-storage type water heaters shall be provided with a pressure relief valve installed at the hot water outlet with no shut off valve between the heater and the relief valve.

3. Temperature and pressure relief valves shall be installed so that the sensing element of the valve extends into the heater or tank and monitors the temperature in the top 6 inches of the heater or tank.

4. A vacuum relief valve shall be installed in each water heater and hot water storage tank which, when measured from the bottom of the heater or tank, is located more than 20 feet above any faucet or outlet served by the heater or tank.

5. Every relief valve which is designed to discharge water or steam shall be connected to a discharge pipe.

   a. The discharge pipe and fittings shall be made of a material acceptable for water distribution piping in accordance with s. Comm. 84.30 (4) (e) 1.

   b. The discharge pipe and fittings shall have a diameter not less than the diameter of the relief valve outlet.

   c. The discharge pipe may not be trapped.

   d. No valve may be installed in the discharge pipe.

   e. The discharge pipe shall be installed to drain by gravity flow to a floor served by a floor drain or to a receptor in accordance with s. Comm. 82.33 (8). The outlet of the discharge pipe shall terminate within 6 inches over the floor or receptor, but not less than a distance equal to twice the diameter of the outlet pipe. The outlet of the discharge pipe may not be threaded.

   f. The discharge pipe for a water heater shall terminate within the same room or enclosure within which the water heater or hot water storage tank is located.

(e) **Controls.** 1. All hot water supply systems shall be equipped with automatic temperature controls capable of adjustments from the lowest to the highest acceptable temperature settings for the intended use.

2. A separate means shall be provided to terminate the energy supplied to each water heater and each hot water circulation system.

(6) **Load factors for water supply systems.** (a) **Intermittent flow fixtures.** The load factor for intermittent flow fixtures on water supply piping shall be computed in terms of water supply fixture units as specified in Tables 82.40–1 and 82.40–2 for the corresponding fixture and use. Water supply fixture units may be converted to gallons per minute in accordance with Table 82.40–3.

* For fixtures not listed, factors may be assumed by comparing the fixture to a listed fixture which uses water in similar quantities and at similar rates.

(b) Continuous flow devices. The load factor for equipment which demands a continuous flow of water shall be computed on the basis of anticipated flow rate in terms of gallons per minute.

(7) SIZING OF WATER SUPPLY PIPING. The sizing of the water supply system shall be based on the empirical method and limitations outlined in this subsection or on a detailed engineering analysis acceptable to the department.

(a) Methodology. The determination of minimum pipe sizes shall take into account the pressure losses which occur throughout the entire water supply system and the flow velocities within the water distribution system. Calculations for sizing a water distribution system shall include:

1. The load factor in water supply fixture units or gallons per minute on the piping;
2. The minimum pressure available from the water main or pressure tank;
3. The pressure loss due to the differences in elevation from the:
   a. Water main or pressure tank to the building control valve; and
   b. Building control valve to the controlling plumbing fixture;

</table>

**Note:** Values not specified in the table may be calculated by interpolation.

4. The pressure losses due to flow through water heaters, water treatment devices, water meters and backflow preventers;

5. The minimum flow pressure needed at the controlling plumbing fixture; and

6. The pressure losses due to flow friction through piping, fittings, valves and other plumbing appurtenances. This pressure loss may be calculated in terms of equivalent lengths of piping. The equivalent length of piping to a controlling plumbing fixture, including fittings, valves and other appurtenances, may be obtained by multiplying the developed length by 1.5.

Note: See Appendix for further explanatory material.

(b) **Private water mains and water services.** Private water mains and water services shall be designed to supply water to the water distribution systems to maintain the minimum flow pressures specified in par. (d), but shall not be less than 3/4 inch in diameter.

Note: See Appendix for further explanatory material.

(c) **Maximum loading.** The calculated load on any portion of the water distribution system may not exceed the limits specified in Tables 82.40-4 to 82.40-9.

(d) **Pressure.** 1. Except as provided in subd. 1. a. to e., water supply systems shall be designed to provide at least 8 psig of flow pressure at the outlets of all fixture supplies.

   a. The flow pressure at the outlets of the fixture supplies serving syphon type urinals, washdown type urinals and water closets, and syphon type flushometer water closets shall be at least 15 psig.

   b. The flow pressure at the outlets of the fixture supplies serving one piece tank type water closets, pressure balance mixing valves, and thermostatic mixing valves shall be at least 20 psig.

   c. The flow pressure at the outlets of the fixture supplies serving blowout type urinals and blowout type water closets shall be at least 25 psig.

   2. a. Except as provided in subd. 3., if the water pressure available from a water main or private water supply exceeds 80 psig, a pressure reducing valve and strainer, if a strainer is not a component of the valve, shall be installed in the water distribution system.

   b. A pressure reducing valve required under subd. 2. a. shall be installed upstream from all plumbing fixtures and plumbing appliances and downstream from the water meter of an utility, if a meter is provided.

3. A pressure reducing valve shall not be required to be installed in a water distribution system which supplies water directly to a water pressure booster pump.

4. If the pressure available from the water main or private water supply is inadequate by calculation to provide the minimum pressures specified in subd. 1., a hydropneumatic pressure booster system or a water pressure booster pump shall be installed to increase the supply of water.

   a. Each water pressure booster pump shall be provided with an automatic low pressure cut-off switch. The cut-off switch shall be located on the inlet side of the pump and shall be set to terminate the energy supplied to the pump when a positive pressure of less than 10 psig occurs.

   b. A vacuum relief valve not less than one-half inch in diameter shall be installed in each water pressure tank, if the bottom of the pressure tank is more than 20 feet above any water supply outlet served by the pressure tank.

(e) **Maximum velocity.** A water distribution system shall be designed so that the flow velocity does not exceed 8 feet per second.

(f) **Minimum sizes.** 1. Water distribution piping 1/2 inch in diameter serving 2 or more plumbing fixtures may not have a load of more than 2 water supply fixture units.

   2. Water distribution piping 1/2 inch in diameter serving a shower which is not individually pressure balanced or individually thermostatically blended may not serve any additional fixtures.
(g) Minimum sizes for fixture supplies. Except as provided in subds. 1. to 3., the fixture supplies serving all plumbing fixtures, appliances and pieces of equipment shall be at least 1/2 inch in diameter.

1. Fixture supplies serving syphon jet type urinals shall be at least 3/4 inch in diameter.

2. Fixture supplies serving flushometer type water closets shall be at least one inch in diameter.

3. Fixture supplies serving emergency eye wash or shower outlets shall be not less than recommended by the manufacturer.

(b) Maximum lengths for fixture supply connectors. 1. a. A fixture supply connector may not exceed more than 24 inches in developed length from a plumbing fixture or the body of a faucet, except as provided in subd. 1. b.

b. A fixture supply connector may not exceed more than 10 feet in developed length from a single faucet or outlet to a water cooler device, water heater, or water treatment device which is to individually serve the faucet or outlet.

2. Fixture supply connectors may extend not more than 10 feet in developed length from a plumbing appliance.

(8) Installation. (a) Frost protection. 1. Adequate measures shall be taken to protect all portions of the water supply system from freezing. All private water mains and water services shall be installed below the predicted depths of frost specified in s. Comm 82.30 (11) (c) 2. d., Figure 82.30.1 and Table 82.30.6, unless other protective measures from freezing are taken.

2. A hose bibb or a hydrant that penetrates an exterior wall of a heated structure shall be a frost proof and self-draining type.

Note: Sec. 82.41 (4) (m) relative to cross connection control devices.

(b) 1. Exterior water supply piping may not be located in, under or above sanitary sewer: manholes, or POWTS treatment, holding or dispersal components.

2. Exterior water supply piping shall be located at least 10 feet horizontally away from a POWTS treatment, holding or dispersal component.

4. If a private water main or a water service crosses a sanitary sewer, the water piping within 10 feet of the point of crossing shall be installed:

a. At least 12 inches above the top of the sewer from the bottom of the water piping;

b. At least 18 inches below the bottom of the sewer from the top of the water piping; or

c. Within a waterproof sleeve made of materials as specified for sanitary building sewers in s. Comm 84.30 (2).

5. Private water mains and water services 2-1/2 inches or larger in diameter shall be installed at least 8 feet horizontally from any sanitary sewer. The distance shall be measured from center to center of the piping.

6. Except as provided in subd. 5., private water mains and water services 2 inches or less in diameter shall be installed at least 30 inches horizontally from any sanitary sewer. The distance shall be measured from center to center of the piping.

7. Private water mains and water services 2 inches or less in diameter may be installed less than 30 inches horizontally from a sanitary sewer, if the bottom of the water piping is installed at least 12 inches above the sewer, except that portion of a water service within 5 feet of developed length from the point where the water service first enters the building may be less than 12 inches above the sewer.

8. No private water main or water service may be installed within 6 inches of a storm sewer.

(c) Limitations. No private water main or water service may pass through or under a building to serve another building, unless:

1. The private water main or water service serves farm buildings or farm houses or both which are all located on one property; or

2. A petition for variance is granted under s. Comm 82.20 (11). The approval or nonapproval of a petition for variance request relative to this paragraph shall determined be on an individual basis and shall be evaluated on site specific conditions, including, at least, whether:

a. The private water main or water service serves only buildings which are all located on one property;

b. The functions or operations of the buildings to be served by the water main or water service are related; or

c. A document, which indicates the piping and distribution arrangement for the property and buildings, will be recorded with the register of deeds.

(d) Water distribution piping. 1. Water distribution piping shall be supported in accordance with s. Comm 82.60.

2. Provisions shall be made to evacuate all water out of the water distribution system.

3. Except where parallel water meters are installed, water distribution piping shall be provided to bypass a water meter 1 1/2 inches or larger.

4. Water distribution piping shall be provided to bypass a water softener and an iron removal device. The bypass piping may be an internal part of the water softener or the iron removal device.

(e) Valves. 1. All control valves installed in a water service, except a valve serving only as a corporation cock, shall be accessible.

2. Stop and waste-type control valves may not be installed underground.

3. All control valves and fixture stop valves installed in a water distribution system shall be accessible. Control valves for the individual plumbing fixtures and appliances within dwelling units shall be accessible from within the dwelling unit.

(f) Water hammer arrestors. All plumbing fixtures, appliances and appurtenances with 3/8 inch or larger inlet openings and with solenoid actuated quick closing valves shall be provided with water hammer arrestors. Water hammer arrestors shall be installed in the fixture supplies serving the fixtures, appliances or appurtenances. Water hammer arrestors shall be accessible.

(g) Temperature control. The water temperature to all showers in public buildings shall be controlled by thermostatic mixing valves or by individually controlled pressure balanced mixing valves.

(h) Fittings and connections. The drilling and tapping of water supply piping shall be prohibited except for:

1. Corporation cocks for a water service or a private water main; and

2. Self-tapping valves which serve individual plumbing appliances.

(i) Flushing and disinfection of potable water supply systems. 1. a. Before a newly constructed water supply system is to be put into use, the piping of the system shall be filled with water and allowed to stand for at least 24 hours. After 24 hours each water outlet shall be flushed beginning with the outlet closest to the building control valve and then each successive outlet in the system.

b. Each portion of a water supply system which is altered or repaired shall be flushed for at least one minute and until the water appears clear.

2. New private water mains and extensions to private water mains shall be disinfected prior to use in accordance with AWWA C601 or the following method:

a. The pipe system shall be flushed with clean water until no dirty water appears at the points of outlet.

b. The system or part thereof shall be filled with a solution of water and chlorine containing at least 50 parts per million of chlorine and the system or part thereof shall be left off and allowed to stand for 24 hours or the system or part thereof shall be filled with a solution of water and chlorine containing at least 200 parts per million of chlorine and allowed to stand for 3 hours.
c. Following the allowed standing time, the system shall be flushed with clean potable water.

d. The procedures shall be repeated if it is shown by a bacteriological examination that contamination still exists in the system.

3. The department may require a water quality analysis to be done for a new or repaired water supply system. The analysis shall be performed in accordance with acceptable nationally recognized laboratory practices. If the water supply system has been disinfected, water samples for the analysis may not be taken sooner than 24 hours after disinfection.

Note: See s. Comm 84.30 (1) regarding the bending of pipe and protection from puncture.

(j) Water softeners. Ion exchange water softeners used primarily for water hardness reduction that, during regeneration, discharge a brine solution into a private onsite wastewater treatment system shall be of a demand initiated regeneration type equipped with a water meter or a sensor unless the design of the private onsite wastewater treatment system specifically documents the reduction of chlorides.

(9) Piping by plumber. In accordance with ch. 145, Stats.,

**Notes:**

- **WSPU** means water supply fixture units.
- **GPM** means gallons per minute.
- **FM** means—predominantly flushometer type water closets or syphon jet urinals.
- **FT** means—predominantly flush tank type water closets or wash down urinals.
- **NP** means—not permitted, velocities exceed 8 feet per second.
- For using this table, round the calculated pressure loss due to friction to the next higher number shown.

Comm 82.40 (7) (f) and (g) specifies minimum sizes for water distribution piping.

**Note:**
- **WSFU** means—water supply fixture units.
- **GPM** means—gallons per minute.
- **FT** means—predominantly flash tank type water closets or washdown urinals.
- **NP** means—not permitted, velocities exceed eight feet per second.

For this table, the calculated pressure loss due to friction for the next higher member shown.

Comm 82.40 (7) (f) and (g) specifies minimum sizes for water distribution piping.

### Comm 82.41
**Cross connection control.**

1. **Scope.** The provisions of this section set forth the requirements for the protection of potable water within water supply systems when and where there is the possibility of contamination due to cross connections or backflow conditions.

2. **Materials.** (a) All devices, assemblies and mechanisms intended to protect potable water supplies relative to connection or backflow shall be of a type recognized and approved in accordance with ch. Comm 84 and as described in sub. (4).

(b) All methods including barometric loops and air gaps intended to protect potable water supplies relative to cross connection or backflow shall be constructed of materials suitable for water supply systems in accordance with ch. Comm 84.

3. **General requirements.** Potable water supply systems and the connection of each plumbing fixture, piece of equipment, appliance, or nonpotable water piping system thereto shall be designed, installed and maintained in such a manner to prevent the contamination of potable water supplies by means of cross connections.

(a) **Types of cross connection control.** 1. Potable water supply systems shall be protected against contamination due to cross connections or backflow conditions by one of the methods or devices specified in Table 82.41-1 depending upon the situation or Table 82.41-2 depending upon the specific application or use, and the limitations specified in sub. (4).

2. For the situations described in par. (b) 3., cross connection control shall be provided as part of the fixture outlet or in the water supply piping for the fixture outlet.

(b) *Classifications.* For the purposes of this section:

1. The designation of a high hazard or low hazard situation shall be determined on the basis of how a toxic or nontoxic solution is intended or recommended by the manufacturer of the solution to interface with the potable water supply system.

2. a. A continuous pressure situation shall be considered to exist when a pressure greater than atmospheric within the water supply system exists for more than 12 continuous hours.

   b. A noncontinuous pressure situation shall be considered to exist if the conditions in sub. 2. a. do not occur.

3. A high hazard connection situation shall be considered to exist for a connection of the water supply system to:
   a. Any part of the drain system; and
   b. Any other piping system conveying water from nonpotable sources, including but not limited to lakes, rivers, streams or creeks.

4. Except as provided in subd. 5., a high hazard cross connection situation shall be considered to exist at:
   a. A water supply hose bibb, faucet, wall hydrant, sill cock or other outlet which terminates with hose threads allowing a hose to be attached;
   b. A water supply faucet, wall hydrant or other outlet which terminates with a serrated nipple allowing a hose to be attached; and
   c. A water supply faucet, hydrant or outlet serving a suction pit used for building maintenance in a public building.

5. A cross connection shall not be considered to exist at the hose threaded outlet installed for the sole purpose of:
   a. Draining a water supply system or any portion thereof;
   b. Obtaining water quality samples of the water supply system or any portion thereof; or
c. Connecting individual residential automatic clothes washers.

6. a. A high hazard situation shall be considered to exist for the connection of two water supply systems one supplied by a public water supply and the other system supplied by a private well.

Note: The interconnection of a public water supply system and another source of water is addressed in 6. NR 811.09 and must be approved by the Department of Natural Resources.

b. Except as provided in subd. 7., a low hazard situation shall be considered to exist for the connection of a piping system, including but not limited to automatic fire sprinkler systems, standpipe systems, and processing purposes, which provides potable water for nonrequired potable water uses.

Note: Cross connection control devices used in conjunction with automatic fire sprinkler systems are to be listed by an acceptable testing agency for such an application. The standards governing the design and installation of automatic fire sprinkler systems.

7. A cross connection situation shall not be considered to exist for an automatic fire sprinkler system serving a one- or 2-family dwelling provided the sprinkler system is constructed of materials and joints suitable for water distribution systems as specified in ss. Comm 84.30 (4) (e) and 84.40, respectively and the sprinkler system is supplied with only potable water.

(c) Containment. 1. For sewerage treatment facilities which are required to conform with ch. NR 110, in addition to the cross connection control required for each potable water usage or water outlet, a reduced pressure principle backflow preventer shall be installed:

a. In the water service to each building or structure within the complex;

b. In the private water main upstream of all water services serving the facility; or

c. In the water distribution system upstream of all water outlets and in the process piping network upstream of all points of use, if both a water distribution system and a process network is contained within the same building or structure.

2. For marinas, wharves and docks where potable water outlets are provided to serve boats or ships, in addition to the cross connection control required for each potable water outlet or usage, a reduced pressure principle backflow preventer shall be installed in the water supply system to limit backflow into the water supply source.

3. The installation of a cross connection control device in the water supply system for a building or structure shall not alleviate the requirement to provide cross connection control for the connection of each plumbing fixture, piece of equipment, appliance or other piping system.

(d) Prohibitions. The use of a toxic solution as a heat transfer fluid in single-wall heat exchanger for potable water is prohibited.

(e) Existing automatic fire sprinkler systems. An alteration, modification or addition to an existing automatic fire sprinkler system shall necessitate conformance with this section, if the:

1. Existing water supply line to the existing sprinkler system is increased in diameter; or

2. Existing device or method which has been previously recognized to address cross connection concerns is to be removed or replaced.

(4) Limitations. (a) Cross connection control devices shall be limited in use in accordance with the respective standard, unless otherwise specifically permitted under this subsection.

(b) A pipe applied atmospheric type vacuum breaker shall be installed such that the bottom of the device or the critical level mark on the device is at least 6 inches above:

1. The flood level rim of the receptor serving the water supply port; and

2. The highest point downstream from the device where backpressure would be created.

(c) 1. a. The use of a hose connection backflow preventer and a hose connection vacuum breaker in a continuous pressure situation shall be limited to campgrounds and marinas.

b. The use of a hose connection backflow preventer and a hose connection vacuum breaker shall be limited to the discharge side of a control valve such as a faucet or hose bibb.

2. A hose connection backflow preventer and a hose connection vacuum breaker may not be employed in backpressure situations of more than 10 feet of water column.

(d) A backflow preventer with intermediate atmospheric vent:

1. May not be employed in backpressure situations of more than 150 psig; and

2. May not serve boilers having a maximum steam pressure setting greater than 15 psig or a maximum water pressure setting greater than 30 psig.

(e) 1. A reduced pressure principle backflow preventer and a reduced pressure detector backflow preventer may not be subjected to a backpressure greater than twice the rated working pressure of the device.

2. A reduced pressure principle backflow preventer and a reduced pressure detector backflow preventer which serve a water-based fire protection system may have a test outlet located between the number 2 check valve and the number 2 listed indicating control valve.

3. A reduced pressure principle backflow preventer and a reduced pressure detector backflow preventer which are 2 inches or smaller in size and which serve a water-based fire protection system are not required to have a test cock on the number one listed indicating control valve.

(f) A hand-held shower may not be employed in backpressure situations of more than 2 feet of water column.

(g) 1. A double check backflow prevention assembly and a double check detector assembly backflow preventer may not be subjected to a backpressure greater than twice the rated working pressure of the device.

2. A double check backflow prevention assembly and a double check detector assembly backflow preventer which serve a water-based fire protection system may have a test outlet located between the number 2 check valve and the number 2 listed indicating control valve.

Note: See Appendix for further explanatory material.

3. A double check backflow prevention assembly and a double check detector assembly backflow preventer which are 2 inches or smaller in size and which serve a water-based fire protection system are not required to have a test cock on the number one listed indicating control valve.

(h) A water supply fed trap seal primer valve shall be installed such that the bottom of the device or the critical level as marked on the device is at least 12 inches above:

1. The connection to the trap; and

2. The highest point downstream from the device where backpressure would be created.

(i) A vacuum breaker wall hydrant, freeze resistant automatic draining type, may not be employed in backpressure situations of more than 10 feet of water column.

(k) 1. A pressure vacuum breaker assembly shall be installed such that the bottom of the device or the critical level mark on the device is at least 12 inches above:

a. The flood level rim of the receptor serving the water supply port; and

b. The highest point downstream from the device where backpressure would be created.

2. A pressure vacuum breaker assembly shall be located only outside.

(L) A laboratory faucet backflow preventer may not be employed in backpressure situations of more than 6 feet of water column.
(m) The cross connection control device to serve a hose bibb or hydrant may not be installed so that the bottom of the device or the critical level mark on the device is at least 12 inches above:
1. The flood level rim of the receptacle serving the water supply port; and
2. The highest point downstream from the device where back-pressure would be created.

(S) INSTALLATION (a) Air gap for cross connection control shall conform to ANSI A112.1.2.
Note: See Appendix for further explanatory material.

(b) Cross connection control methods, devices and assemblies shall be installed in accordance with the manufacturer's written installation specifications and this chapter. The methods, devices and assemblies shall be accessible for inspection, testing, maintenance and replacement.
Note: See s. Comm 84.30 (5) (c).

(c) Cross connection control devices shall be protected from freezing.

(d) 1. A cross connection control device may not be located in uninhabitable spaces susceptible to flooding.
2. A cross connection control device which has one or more vent ports may not be located in a pit, vault or depression which is below the adjacent grade or floor level, even if the pit, vault or depression is provided with a drain at the bottom of the pit.

(e) 1. Vent ports of cross connection control devices shall be positioned:
   a. Away from areas where toxic gases and fumes may accumulate;
   b. Downward or protected to protect the ports from falling debris; and
   c. So as to drain dry.
2. Cross connection control devices shall be so located that any vent ports of the devices shall be provided with an air gap in accordance with par. (a).

3. a. If a reduced pressure principle backflow preventer or a reduced pressure detector backflow preventer is located within a building, a drain or receptacle shall be provided to receive the discharge from the vent ports of the device. If a floor drain is to receive the discharge from the vent ports of a reduced pressure principle backflow preventer or a reduced pressure detector backflow preventer, the flow or pathway of the discharge may not create a nuisance.
   b. Where drain piping is provided for the discharge from a vent port, an air gap in accordance with par. (a) shall be provided between the vent port and the drain piping.
   c. Where a receptacle is provided for the discharge from a vent port, an air gap in accordance with par. (a) shall be provided between the vent port and the receptor.

(f) The installation of a reduced pressure principle backflow preventer, a reduced pressure detector backflow preventer, a double check backflow prevention assembly, a double check detector assembly backflow preventer, a pressure vacuum breaker assembly and a back siphageon backflow vacuum breaker shall conform to the following limitations:
1. The minimum distance between the floor, surface or platform which is to provide access and the lowest point of the assembly may not be less than 12 inches.
2. The maximum distance between the floor, surface or platform which is to provide access and the lowest point of the assembly may not be more than 7 feet.
3. The minimum distance between a ceiling or other obstruction and the highest point of the assembly may not be less than 18 inches.
4. The minimum distance between a wall or other obstruction and the back and ends of the assembly may not be less than 4 inches.
5. The minimum distance between a wall or other obstruction and the front of the assembly may not be less than 24 inches.
Note: See Appendix for further explanatory material.

(g) The discharge outlet of local waste piping serving a cross connection control device shall be visible and not be located within a concealed space.

(i) No control valve may be placed downstream from a pipe with a pressure relief valve or a laboratory faucet backflow preventer.

(j) A vacuum backflow preventer shall be installed such that:
1. The bottom of the horizontal portion of the tee is installed at least one inch above the flood level rim of the receptacle;
2. The inside diameter of the tee is equal to or greater than the inside diameter of the drain piping from the waste treatment device;
3. The tee is installed in such a position that the discharge will not create a nuisance;
4. The piping upstream of the tee is of a type suitable for water distribution in accordance with s. Comm 84.30 (4) (c).
5. Thevent portion of the tee is equal to or greater than the inside diameter of the drain piping from the waste treatment device;
6. The vent port of the tee is:
   a. Positioned away from areas where toxic gases and fumes may accumulate;
   b. Constructed to protect the port from falling debris.

(6) MAINTENANCE AND TESTING. (a) All cross connection control devices shall be maintained and tested in accordance with s. Comm 82.21 (3).

History: 1-2-56, r. (2) through (7), Register, October, 1971, No. 196, eff. 11-1-71; r. and rec. Subchapter V — Special Plumbing Installations
Comm 82.50 Health care and related facilities.

(1) PLAN APPROVAL REQUIRED. Plans for plumbing and equipment for health care facilities shall be approved by the department.

(2) SCOPE. The scope of this section shall cover devices, fixtures and equipment which are installed and maintained in health care facilities such as hospitals, nursing or rest homes, homes for the aged, infirmaries, residential care facilities, orphanages, retirement homes, sanatoriums, clinics, mortuaries, and schools of medicine, surgery, dentistry, and research and testing laboratories whether enumerated or not. This section also applies to offices of dentists and doctors.

(3) INTENT. The primary intent of the following minimum requirements is to protect public health by eliminating other potential health or safety hazards to patients and institutional personnel, and to promote the efficient use, operation and maintenance of the equipment used in the institution or establishment. Fixtures, devices and/or equipment in addition to those prescribed herein may be required dependent upon the type of occupancy,
treatment, care or layout. Such additional facilities shall be installed in accord with the provisions of this chapter.

(4) PLUMBING IN MENTAL HOSPITALS. Special consideration shall be given to the design and installation of plumbing fixtures in areas where disturbed patients are housed. No pipes or traps shall be exposed and all fixtures shall be securely bolted through walls or floors.

(5) SPECIAL FIXTURES AND EQUIPMENT ACCEPTABILITY. (a) Special fixtures. Fixtures which are designed for any special use such as, therapy, special cleaning and/or disposal of waste materials shall be smooth, impervious, corrosion resistant materials and, if subject to temperatures in excess of 180°F, shall be able to withstand without damage, higher temperatures as may be specified. Scrub-up sinks, lavatories and sinks in patient care areas, and fixtures used by medical and nursing staff, shall have the water supply spout terminate a minimum of 5 inches above the rim of the fixture. These fixtures shall be equipped with valves or faucets which can be operated without use of the hands.

(b) Special equipment. All devices, apparatus, appliances and apparatus intended to serve a special function such as sterilization, distillation, processing, cooling, storage of ice or foods, etc., which may be connected to either the water supply distribution or drainage systems or both, shall be provided with protection against back-siphonage, backflow, flooding, fouling, or any possibility of contaminating any portion of the water supply system, or equipment, or the misuse of any drain.

(c) Therapeutic equipment. Therapeutic equipment shall not be counted as a patient bathing fixture to meet the required patient bath ratio.

(6) FIXTURE AND EQUIPMENT INSTALLATION. (a) Clinic sinks. Such sinks shall have an integral trap in which the upper portion of a visible trap seal provides a water surface. The fixture shall be designed so as to permit complete removal of the contents by siphonic and/or blow-out action, and to rescale the trap in a single flushing operation. A flushing rim shall provide water to cleanse the interior surface. The fixtures shall have flushing and cleansing characteristics similar to a water closet.

(b) Prohibited use of clinic sinks and service sinks. A clinic sink shall not be used as a janitor’s service sink. A janitor’s service sink shall not be used for the disposal of urine, fecal matter, or other human wastes.

(c) Special requirement for ice manufacture and storage. 1. No machines for manufacturing ice, or any device for handling or storing ice, shall be located in a room containing a bedpan hopper, clinic sink, bedpan washer, or similar fixture. Machines for manufacturing ice, or devices for handling or storing ice intended for either human consumption or packs, shall be located in a clean utility room, a floor pantry, a diet kitchen, or in other similar locations.

2. Each drain serving an ice chest or box shall discharge into an indirect waste receptor. Each drain shall discharge through an air-break above the receptor. The end of the drain shall be covered with a removable 10 mesh per inch noncorrosive screen.

(7) STERILIZERS. (a) Descaling prohibited. The interior of water sterilizers, stills, or similar equipment shall not be descaled or otherwise treated by acid or other chemical solutions while the equipment is connected to the water and/or drainage systems.

(b) Compliance with boiler and pressure vessel code. Pressure sterilizers and pressure type instrument washer sterilizers installed after the effective date of this code shall be constructed and stamped in accordance with the provisions of chs. Comm 41 and 42. All pressure sterilizers and pressure type instrument washer sterilizers regardless of size shall be equipped with pressure relief devices in accordance with the provisions of chs. Comm 41 and 42.

(c) Sterilizer piping. The connecting piping and/or devices for sterilizers shall be accessible for inspection and maintenance.

(d) Bedpan washers and clinic sinks. Bedpan washers and clinic sinks shall be connected to the sanitary drainage system and vented in accordance with the requirements for water closets. Vapor vents serving bedpan washers shall not connect to the plumbing system.

(8) DRAINAGE AND VENTING. (a) Sterilizer wastes. 1. Indirect wastes required. All sterilizers shall be provided with individual and separate indirect wastes, with air-gaps of not less than 2 diameters of the waste tailpiece. The upper rim of the receptor, funnel, or basket type waste fitting shall be not less than 2 inches below the vessel or piping, whichever is lower. Except as provided in subd. 3 and 5, a “P” trap shall be installed on the discharge side of and immediately below the indirect waste connection serving each sterilizer.

2. Floor drain required. In any room containing the recessed, or concealed portions of sterilizers, not less than one acceptable floor drain, connecting to the drainage system, shall be installed in a manner to drain the entire floor area. The floor drain waste trap shall be a minimum diameter of 3 inches. It shall receive the drainage from at least one sterilizer within the room to assure maintenance of the floor drain trap seal. The sterilizer drain may be installed on a branch taken off between the floor drain trap and the strainer. No individual sterilizer waste trap shall be required on this type of installation. See following sketch.

3. Battery assemblies. A battery assembly of not more than 3 sterilizer wastes may drain to one trap, provided the trap and waste are sized according to the combined fixture unit rating; the trap is located immediately below one of the indirect waste connections; the developed distance of a branch does not exceed 8 feet; and the branches change direction through a tee-woye or wye pattern fitting.

4. Bedpan steamers, additional trap required. A trap with a minimum seal of 3 inches shall be provided in a bedpan steamer drain located between the fixture and the indirect waste connection.

5. Pressure sterilizer. Except when an exhaust condenser is used, a pressure sterilizer chamber drain may be connected to the exhaust drip tube before terminating at the indirect waste connection. If a vapor trap is used, it shall be designed and installed to prevent moisture being aspirated into the sterilizer chamber. The jacket steam condensate return, if not connected to a gravity sink, shall be separately and indirectly wasted. If necessary to cool a high temperature discharge, a cooling receiver, trapped on its discharge side, may serve as the fixture trap.

6. Pressure sterilizer exhaust condensers. The drain from the condenser shall be installed with an indirect waste. If condensers are on pressure sterilizers, the chamber drain shall have a separate indirect waste connection.

7. Water sterilizer. All water sterilizer drains, including tank, valve leakage, condenser, filter and cooling, shall be installed with indirect waste or according to subd. 2.

8. Pressure instrument washer—sterilizer. The pressure instrument washer—sterilizer chamber drain and overflow may be interconnected. Also, they may be interconnected with the condenser.

(b) Vapor vent material. Material for vapor vents serving bedpan washers and sterilizer vents serving sterilizers shall be materials approved for vent piping.

Register, April, 2000, No. 332
(c) **Vent connections prohibited.** Connections between vapor vents serving bedpan washers, sterilizing apparatus, and/or normal sanitary plumbing systems, are prohibited.

(d) **Vapor vents and stacks.** 1. Bedpan washers. Bedpan washers shall be vented to the outer atmosphere above the roof by means of one or more vapor vents. The vapor vent for a bedpan washer shall be not less than a 2-inch diameter pipe. A vapor vent serving a single bedpan washer may drain to the fixture served.

2. Multiple installations. Where bedpan washers are located above each other on more than one floor, a vapor vent stack may be installed to receive the vapor vent on the various floors. Not more than 3 bedpan washers shall be connected to a 2-inch vapor vent stack, 6 to a 3-inch vapor vent stack, and 12 to a 4-inch vapor vent stack. In multiple installations, the connections between a bedpan washer vapor vent and a vapor vent stack shall be made by use of a tee or tee-wye sanitary pattern drainage fittings, installed in an upright position.

3. Trap required. The bottom of the vapor vent stack, except when serving only one bedpan washer, shall be drained by means of a trapped and vented waste connection to the plumbing sanitary drainage system. The trap and waste shall be the same size as the vapor vent stack.

4. Trap seal maintenance. A water supply of not less than ¼ inch minimum tubing shall be taken from the flush supply of each bedpan washer on the discharge or fixture side of the vacuum breaker, trapped to form not less than a 3-inch seal, and connected to the vapor vent stack on each floor. The water supply shall be so installed as to provide a supply of water to the vapor vent stack for cleansing and drain trap seal maintenance each time a bedpan washer is flushed.

(e) **Sterilizer vapor vent and stacks.** 1. Connections. Multiple installations of pressure and nonpressure sterilizers shall have their vent connections to the sterilizer vent stack made by means of inverted wye fittings. Such vent connections shall be accessible for inspection and maintenance.

2. Drainage. The connection between sterilizer vent and/or exhaust openings and the sterilizer vent stack shall be designed and installed to drain to the funnel or basket-type waste fitting. In multiple installations, the sterilizer vent stack shall be drained separately to the lowest sterilizer funnel or basket-type waste fitting or receptor.

(f) **Sterilizer vapor vent stack sizes.** 1. Bedpan steamers. The minimum size of a sterilizer vent serving a bedpan steamer shall be 1-1/2 inches in diameter. Multiple installation shall be sized according to Table 22.

2. Boiling type sterilizers. The minimum size of a sterilizer vent stack shall be 2 inches in diameter when serving a utensil sterilizer, and 1-1/2 inches in diameter when serving an instrument sterilizer. Combinations of boiling type sterilizer vent connections shall be based on Table 22.

¹Combination of sizes.
²Total of each size.

4. **Pressure instrument washer-sterilizer sizes.** The minimum size of a sterilizer vent stack serving an instrument washer-sterilizer shall be 2 inches in diameter. Not more than 2 sterilizers shall be installed on a 2-inch stack, and not more than 4 on a 3-inch stack.

(9) **FLOOR DRAINS PROHIBITED.** Floor drains shall not be installed in operating or delivery rooms.

(10) **WATER SUPPLY.** (a) **Water services.** All hospitals shall be provided with at least 2 water service connections and whenever more than one street main is available, the connections shall be made to different street mains.

1. The water service pipe for all other health care facilities shall be of sufficient size to furnish water to the building in the quantities and at the pressures required in s. Comm 82.40 (4) and (5) and par. (c).

2. Water services shall be in accord with the requirements of s. Comm 82.40 (2).

(b) **Water distribution control valves.** 1. Four or less patient care units, containing not more than 2 persons per unit exclusive of intensive care coronary units, may be served with one branch

Register, April, 2000, No. 532
control valve. All fixtures, appliances, appurtenances, lawn sprinkler faucets and wall hydrants shall be valved.

2. Control valves for risers, water heating equipment, water softeners and tank controls shall be in accord with s. Comm 82.40. Control valve accessibility and design shall be in accord with s. Comm 82.40.

(c) Velocities and flow capacities. Water supply piping shall be designed to provide service to upper floor installations at a minimum pressure of 15 (p.s.i.) pounds per square inch during maximum demand periods. Velocities shall not exceed 8 (f.p.s.) feet per second. Where static pressure exceeds 80 (p.s.i.) pounds per square inch, pressure reducing controls shall be installed to avoid fracture or other damage to the system. The supply demand in gallons per minute in the building water distribution system shall be determined on the basis of the load in terms of supply fixture units and of the relationship between load and supply demand as shown in Table 24 and pertinent portions of Tables 82.40-. to 82.40-9.

(d) Piping insulation. Circulating, hot, cold and chilled water piping shall be insulated. Cold and chilled water pipe insulation shall have an integral or separate vapor barrier.

(e) Special piping systems. Distilled water, ionized water, laboratory and other special piping systems shall be included in the plans submitted. The plans shall incorporate sufficient detail to clearly establish the installation proposed.

(g) Hot water supply control. Hot water supply to patients’ showers, therapeutic equipment, and continuous baths shall be provided with control valves automatically regulating the temperature of the water supply to the fixture. The valve shall fail in a closed position when the tempered water supply to the fixture exceeds 110°F.

(h) Hot water supply. The water supply distribution system shall be designed to provide hot water at each applicable fixture at all times. The system shall be of a circulating type. The circulating pumps shall be arranged for continuous operation or shall be controlled by an aqualstat in the circulating piping. See s. Comm 82.40(5).

(i) Water heaters and tanks. Storage tanks when provided shall be fabricated of non-corrosive metal or be lined with non-corrosive material. The water heating equipment shall have a sufficient capacity to supply water at the temperature and amounts in Table 26.

(11) Aspirators. The use of water aspirators shall be limited to those units approved by the department.

(12) Spouts and actions—hospital and nursing home fixtures. (a) The selection of spouts and actions for hospital and nursing home plumbing fixtures shall comply with par. (b) and Table 27.

(b) Lavatories and sinks required in patient care areas shall have the water supply spout mounted so that its discharge point is
a minimum distance of 5 inches above the rim of the fixture. All
fixtures used by medical and nursing staff, and all lavatories used
by patients and food handlers shall be trimmed with valves which
can be operated without the use of hands. Where blade handles are
used for this purpose they shall not exceed 4-1/2 inches in length,
except that handles on scrub sinks and clinical sinks shall be not
less than 6 inches long.

</tbody>
</table>

* See s. Comm 82.30 (4) (6).

(b) Building sewer. The building sewer for a mobile home shall be at least 4 inches in diameter.
(c) Mobile home drain connection. The piping between the mobile home drain outlet and the building sewer shall have a minimum slope of 1/4 inch per foot and shall be of materials approved for above ground drain and vent pipe in accordance with ch. Comm 84. The connector shall be protected against freezing.
(d) Other requirements. Mobile home park sewer systems shall also conform to the applicable requirements of s. Comm 82.30.

(2) Water supply systems. (a) Private water mains. 1. Supply demand. The supply demand in gallons per minute in the private water main system shall be determined on the basis of the load in terms of water supply fixture units, and in terms of the relationship between load and supply demand. The demand load of a mobile home site shall be equivalent at least 15 water supply fixture units.

2. Sizing. The private water mains shall be sized in accordance with s. Comm 82.40. A private water main serving a mobile home park shall not be less than one inch in diameter.
3. Pressure. The minimum pressure within a private water main shall be sufficient to maintain a pressure of 20 psi at each mobile home site under normal operating conditions.
4. Valving. Each private water main shall be provided with a gate or full flow valve at its source and at each branch connection. The valves shall be installed in a manhole or valve box so as to be accessible for operation.
(b) Water services. 1. Size. Each mobile home site shall be served by a separate water service not less than 3/4 inch in diameter.
2. Valving. a. Each water service shall be provided with a curb stop within each mobile home site but not under the parking hard stand or pad.
   b. A valve, of at least 3/4 inch diameter, shall be located on the upper end of the water service pipe. In lieu of the valve located on the upper end of the water service, a freezeless type hydrant of at least 3/4 inch diameter may be used.
   c. The installation of underground stop and waste valves shall be prohibited.
3. Mobile home water connector. The piping between the mobile home water inlet and the water service shall be of materials approved for water distribution pipe in accordance with s. Comm 84.30 (3).
(c) Protection against freezing. All water main and water services piping shall be protected against freezing.
(d) Separation of water and sewer piping. Separation of water and sewer piping shall be in accordance with ss. Comm 82.30 (1) (d) and 82.40 (8) (b).
(e) Other requirements. Mobile home park water supply systems shall also conform to the applicable requirements of s. Comm 82.40.
(3) Building sewer and water service terminations. (a) Frost sleeves. Each building sewer and water service shall have a frost sleeve extending at least 42 inches below grade. The sleeve shall be of a material approved for building sewers, Frost sleeves shall terminate at grade. A frost sleeve shall be covered or sealed when not in use.
(b) Termination elevation. Each water service shall terminate at least 6 inches above the surrounding finished grade. Each building sewer shall terminate at least 4 inches above the surrounding.
finished grade and shall not terminate higher than the water service pipe.

(c) **Piping not in use.** A building sewer or water service pipe not connected to a mobile home shall be capped or plugged.

**Note:** See Appendix for further explanatory material.

**History:** Cr. Register, February, 1985, No. 350, eff. 3–1–85; r. and recr. Table, Register, August, 1991, No. 428, eff. 9–1–91; ann. (2) (d), Register, February, 1994, No. 456, eff. 3–1–94.

**Subchapter VI—Installation**

**Comm 82.60 Pipe hangers and supports.** The provisions of this section control the types, materials and installation of anchors, hangers and supports for plumbing piping.

1. **Material.** (a) **Strength.** Hangers, anchors and supports for piping shall be of sufficient strength to support the piping and its contents. Drain piping shall be considered as being full of water. Underground piers for pipe support shall be of concrete, masonry, plastic or pressure treated wood.

(b) **Compatibility.** 1. Hangers and straps shall be of a compatible material that will reduce the potential for galvanic action with the piping.

2. Hangers and straps may not distort, cut or abrade piping.

2. **Installation.** (a) Piping hangers and anchors shall be securely attached to the building’s structure at intervals to support the piping and its contents, but not at intervals greater than those specified in Table 82.60. The connection of drain piping to a fixture or appliance shall be considered a point of support.

(b) Hubless pipe installed in the horizontal position shall be supported within 24 inches on each side of a joint, unless the joint has an alignment retaining shield.

(c) Hangers shall not be attached to a building’s structure by means of wood plugs.

<sup>a</sup> The maximum horizontal spacing for supports may be increased to 10 feet when 10-foot lengths of pipe are employed.

<sup>b</sup> Mid-story guide is to be employed.

<sup>c</sup> "≥" means greater than or equal to.

<sup>c</sup> "≤" means less than or equal to.

**History:** Cr. Register, February, 1985, No. 350, eff. 3–1–85; r. and recr. Register, May, 1988, No. 385, eff. 6–1–88; r. and recr. Table 82.60, Register, February, 1994, No. 456, eff. 3–1–94.
Chapter Comm 82

APPENDIX

The material contained in this appendix is for clarification purposes only. The notes, illustrations, etc., are numbered to correspond to the number of the rule as it appears in the text of the code.

A-82.11 (29) BRANCH INTERVALS.

---

The distance of 7'-0" between branches A & B is not considered a branch interval. The definition states "... 8 feet or more below."
A-82.11 (140) SPRINGLINE OF PIPE

On a round pipe the springline is along the horizontal centerline.
A-82.20 (2) AGENT MUNICIPALITIES. The department has designated to the following municipalities, the authority to review and approve plumbing plans and specifications for those plumbing installations to be located within the municipality's boundary limits and which require approval under s. Comm 82.20 (1) (b).

A-82.30 (4) SIZE OF DRAIN PIPING. The following tables list the maximum GPM which can be expected to readily flow through a given size trap where the receptor has a height as indicated.

Also listed is a maximum drainage fixture unit load which a given size receptor trap may be expected to adequately receive.

Note: The department recommends an individual 4-inch diameter minimum trap and drain pipe for a commercial type dishwasher.

A–82.40 (5) STORAGE TANK AND PIPING INSULATION. The following is a reprint of section Comm 63.29 (1) and (2).

Comm 63.29 Insulation, materials and construction. (1) GENERAL. Insulation required by subs. (2) and (3) shall be suitably protected from damage.

Note: Insulation should be install in accordance with practices acceptable to the department such as MICA Commercial and Industrial Insulation Standards.

(2) PIPING INSULATION. Except as provided in pars. (a) to (c), recirculating plumbing system piping, plumbing piping in the first 8 feet from storage tanks for noncirculating systems, any piping served by a self-regulating electric heating cable, HVAC system piping, and related HVAC fluid conveying conduit, such as heat exchanger bodies, shall be thermally insulated in accordance with Table 63.29–1 or equivalent. The following piping or conduit is exempted from this subsection:

(a) Factory–installed piping or conduit within HVAC equipment tested and rated in accordance with s. Comm 63.20;
(b) Piping or conduit for which no insulation is specified in Table 63.29–1.
(c) Where it can be shown that the heat gain or heat loss to or from piping or conduit without insulation will not increase building energy use.

Note: For equivalent insulation levels using alternative insulation types, the calculation procedure specified in A63.29 of Appendix A is acceptable to the department.

a For minimum thicknesses of alternative insulation types, see Appendix A.
b Plumber piping systems without heat trap to prevent circulation due to natural convection shall be considered circulating systems.
c The required minimum thicknesses do not consider water vapor transmission and condensation. Additional insulation, vapor retarders, or both, may be required to limit water vapor transmission and condensation.

A–82.40 (7) (a) METHODOLOGY.

Where equipment such as an instantaneous or tankless water heater, water treatment device, water meter, and backflow preventer is provided in the design, the friction loss in such equipment, corresponding to the GPM demand, should be determined from the manufacturer or other reliable source.

Where a direct fired pressurized tank type water heater is provided in the design, the friction loss for such equipment can be assumed as part of the pressure losses due to flow through piping, fittings, valves and other plumbing appurtenances when the developed length of piping is multiplied by 1.5.

The pressure losses due to flow friction through displacement type cold-water meters may be calculated from Graph A–82.40 (7)–1.

Chapter Comm 83
PRIVATE ONSITE WASTEWATER TREATMENT SYSTEMS

Subchapter I—Scope and Application
Comm 83.01 Purpose.
Comm 83.02 Scope.
Comm 83.03 Application.
Comm 83.04 Implementation.
Comm 83.05 Installation and inspection training.

Subchapter II—Administration and Enforcement
Comm 83.20 Purpose.
Comm 83.21 Sanitary permits.
Comm 83.22 Plan review and approval.
Comm 83.23 Review agent status.
Comm 83.24 Petitions for variance.
Comm 83.25 Governmental programs.
Comm 83.26 Inspections and testing.
Comm 83.27 Experiments.
Comm 83.28 Penalties.
Comm 83.29 Range of responses.

Subchapter III—General Requirements
Comm 83.30 Purpose.
Comm 83.31 Principles.
Comm 83.32 Prohibitions and limitations.
Comm 83.33 Abandonment.

Note: Chapter H 63 was created as an emergency rule effective 6-21-80, chapter H 63 as it existed on June 30, 1983 was renumbered to chapter ILIR 83. Chapter ILIR 83 was renumbered chapter Comm 83 under s. 13.93 (2m) (b) 1., Stats., and corrections made under s. 13.93 (2m) (b) 6. and 7., Stats., Register, February, 1997, No. 494. Chapter Comm 83 as it existed on June 30, 2000 was repealed and a new chapter Comm 83 was created, Register, April, 2000, No. 532, eff. 7-1-00.

Subchapter I—Scope and Application
Comm 83.01 Purpose. The purpose of this chapter is to establish minimum standards and criteria for the design, installation, inspection and management of a private onsite wastewater treatment system, POWTS, so that the system is safe and will protect public health and the waters of the state.
History: Cr. Register, April, 2000 No. 532, eff. 7-1-00.

Comm 83.02 Scope. (1) WASTEWATER GENERATION. Except as delineated in sub. (2), this chapter applies to all of the following:
(a) A situation where domestic wastewater is collected and conducted by means of plumbing drain systems and is not conveyed to a wastewater treatment facility regulated by the department of natural resources.
(b) A POWTS where domestic wastewater is treated and dispersed to the subsurface.
(c) A holding tank that is utilized as a POWTS or as part of a POWTS to collect and hold domestic wastewater for transport and treatment elsewhere.

Note: Section Comm 83.10 (b) states that where plumbing fixtures exist in a building which is not connected to a public sewer system, suitable provision shall be made for treating and recycling the sewage and wastewater by a method of holding or treatment and disposal satisfactory to the department.
Note: The department of natural resources is responsible for establishing, administering and enforcing standards relative to domestic wastewater treatment systems which either dispose to the surface or to surface waters. The department of natural resources also establishes effluent limitations and monitoring requirements where the design daily influent wastewater flow to a POWTS exceeds 12,000 gallons per day for the purpose of fulfilling WPDES permit requirements under ch. 283, Stats.
Note: Pursuant to s. 281.17 (5), Stats., the department of natural resources may also restrict or specify the type of wastewater treatment necessary. Section 281.17 (5) reads:
The department (department of natural resources) may prohibit the installation or use of septic tanks in any area of the state where the department finds that the use of septic tanks would impair water quality. The department shall prescribe alternate methods for waste treatment and disposal in such prohibited areas.
(2) EXCEPTIONS. This chapter does not apply to:
(a) A POWTS owned by the federal government and located on federal lands; and
(b) A POWTS located or to be located on land held in trust by the federal government for Native Americans.
(2) SUBoppers. This chapter does not establish minimum lot sizes or lot elevations under s. 145.23, Stats., for the purpose of the department reviewing proposed subdivisions which will not be served by public sewers under s. 236.12, Stats.
History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.03 Application. (1) INSTALLATIONS. (a) New POWTS INSTALLATIONS. The design, installation and management of a new POWTS shall conform with this chapter.
Note: Pursuant to s. 145.135 (2) (b) , Stats., the approval of a sanitary permit is based on the rules in effect on the date of the permit approval.
(b) Modifications to existing POWTS. A modification to an existing POWTS, including the replacement, alteration or addition of materials, appurtenances or POWTS components, shall require that the modification conform with the approved design.
(c) Modifications to existing structures served by existing POWTS. When an addition or alteration is proposed to an existing building, structure or facility that is served by an existing POWTS and the proposed addition or alteration will result in a change that affects the wastewater flow or wastewater contaminant load beyond the minimum or maximum capabilities of the existing POWTS, the POWTS shall be modified to conform to the rules of this chapter.
Note: See s. Comm 83.25 (2) relating to the issuance of building permits.
(2) RETROACTIVITY. (a) This chapter does not apply retroactively to an existing POWTS installed prior to July 1, 2000, or for which a sanitary permit was issued prior to July 1, 2000, except as provided in ss. Comm 83.32 (1) (a) and (c) to (g), 83.54 (4) and 83.55 (1) (b).
(b) 1. Except as provided in subd. 2. and ss. Comm 83.32 (1) (a) and (c) to (g), 83.54 (4) and 83.55 (1) (b), an existing POWTS installed prior to July 1, 2000, shall conform to the siting, design, construction and maintenance rules in effect at the time the sanitary permit was obtained or at the time of installation, if no sanitary permit was issued.
2. a. An existing POWTS installed prior to December 1, 1969 with an infiltrative surface of treatment and dispersal component that is located 2 feet or more above groundwater or bedrock shall be considered to discharge final effluent that is not sewage, unless proven otherwise.

b. An existing POWTS installed prior to December 1, 1969 with an infiltrative surface of treatment and dispersal component that is located less than 2 feet above groundwater or bedrock shall be considered to discharge final effluent that is sewage, unless proven otherwise.

c. An existing POWTS which conforms with this chapter shall be permitted to remain as installed.

(3) PLAT RESTRICTIONS. The department shall consider a restriction or a prohibition placed on a lot or an outlot prior to July 1, 2000, as a result of its plat review authority under s. 236.12, Stats., waived, if a POWTS proposed for the lot complies with this chapter.

(4) GROUNDWATER STANDARDS. (a) Pursuant to s. 160.255, Stats., the design, installation, use or maintenance of a POWTS is not required to comply with the nitrate standard specified in ch. NR 140 Table 1, except as provided under sub. (5).

(b) Pursuant to s. 160.19 (2) (a), Stats., the department has determined that it is not technically or economically feasible to require that a POWTS treat wastewater to comply with the preventative action limit for chloride specified in ch. NR 140 Table 2 as existed on June 1, 1998.

Note: The prevention action limit for chloride as a performance standard relative to the design and management of a POWTS has been determined to be unfeasible because of the excellent performance of removing chloride from water. The physical processes of removing chloride, such as through evaporation and reverse osmosis, would separate feedwater into two streams, one with a reduced chloride content and the other with an increased chloride content, and result in still having to treat and dispose of chloride contaminated wastewater. The design and management practice to address the enforcement standard for chloride as it relates to a POWTS is addressed under s. Comm 82.40 (9) (j).

(5) ZONING. This chapter does not affect municipal requirements relating to land use, zoning, or other similar requirements, including, pursuant to s. 59.69, Stats., establishing nitrate requirements to encourage the protection of groundwater resources.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.04 Implementation. (1) (a) For the purpose of facilitating inspection responsibilities and services, a governmental unit may not issue a sanitary permit for the construction or use of a POWTS that utilizes any of the technologies, designs or methods delineated in Table 83.04–1 and that has been recognized under s. Comm 84.10 (3) or F32.22, unless the governmental unit utilizes one or more individuals, who have obtained approved training under s. Comm 83.05 for the POWTS technology, design or method, to provide the inspections under s. Comm 83.26 (2) to (4), except as provided in par. (b).

(b) A governmental unit may issue a sanitary permit for the construction or use of a POWTS that utilizes any of the technologies, designs or methods delineated in Table 83.04–1 and that has not been recognized under s. Comm 84.10 (3), but has been approved by the department under s. Comm 83.22, provided that governmental unit has arranged with the department to provide the inspections under s. Comm 83.26 (2) to (4).

a Includes drip irrigation.
b Includes an aerobic treatment tank or a complete treatment unit within a tank.
c Includes a chlorinator, composting unit and ultraviolet light unit.
d Does not include a mound system.

d Includes a septic tank.

(2) (a) For the purpose of facilitating planning and administration, a governmental unit may, by ordinance, allot, limit or deny, until January 1, 2003, the issuance of sanitary permits for the construction or use of, within the jurisdiction of the governmental unit, POWTS designs that utilize one or more of the technologies, designs or methods delineated in Table 83.04–2.

(b) 1. The governmental unit option to allot, limit or deny the issuance of sanitary permits under par. (a) shall be limited to permits to serve new development.

2. For the purpose of this subsection, a new development shall be considered a property without an existing habitable building.

Table 83.04–2

a Includes drip irrigation.
b Includes an aerobic treatment tank or a complete treatment unit within a tank.
c Includes a chlorinator, composting unit and ultraviolet light unit.
d Does not include a mound system.

d Includes a septic tank.

(3) (a) For the purpose of facilitating planning and administration, a governmental unit may, by ordinance, allot, limit or deny the issuance of sanitary permits within the jurisdiction of the governmental unit for the construction or use of POWTS designs that utilize a method or technology that is added to the list under s. Comm 83.61 after July 1, 2001 for not more than 18 months after that type of method or technology has been recognized under this section.

(b) 1. The governmental option to allot, limit or deny the issuance of sanitary permits under par. (a) shall be limited to permits intended to serve new development.
2. For the purpose of this subsection, a new development shall be considered a property without an existing habitable building.

Note: The provisions of this section relating to a governmental unit's ability to limit the issuance of sanitary permits for new development does not dictate a specific strategy with respect to the scope of the limitation. Therefore, limitations options include, but are not limited to, a prohibition for all new development or in certain geographical areas, a quota system for new development, a requirement for a permit to operate for a specific POWTS method or technology, or a service/performace bond for a specific POWTS method or technology.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.05 Installation and inspection training. (1) PROGRAM SPECIFICATIONS (a) Only courses, programs and seminars approved in writing by the department in accordance with this section shall be used to fulfill the required training for the POWTS technologies and methods under ss. Comm 83.04 (1) (a) and 83.21 (2) (c) 4.

(b) 1. The request for a course, program or seminar to be recognized for approval shall be submitted in writing to the department.

2. The request for a course, program or seminar to be recognized for approval shall be received by the department at least 30 calendar days prior to the first day the course, program or seminar is to be conducted.

3. The request for approval shall include sufficient information to determine if the course, program or seminar complies with this subsection.

4. The department shall review and make a determination on a request for approval within 21 calendar days of receipt of the request and information necessary to complete the review.

(c) Courses, programs and seminars to be considered for approval toward installation and inspection training credit shall relate to the installation, operation and maintenance of the technology or method.

(d) 1. The department may impose specific conditions in approving a course, program or seminar for installation and inspection training credit, including limiting credit to specific license, certification or registration categories.

2. The approval of a course, program or seminar for installation and inspection training credit shall expire 5 years after the date of approval.

3. The department may revoke the approval of a course, program or seminar for installation and inspection training credit for any false statements, misrepresentation of facts or violation of the conditions on which the approval was based. The department may not revoke the approval of a course, program or seminar less than 30 calendar days prior to the course, program or seminar being held.

(e) 1. The individual or organization that had obtained the course, program or seminar approval shall maintain an attendance record of those individuals who have attended and completed the course, program or seminar.

2. The attendance record shall include all of the following:

a. The course name.

b. The course identification number assigned by the department.

c. The date or dates the course was held or completed.

d. The name of each person attending the course for training and inspection credit.

3. A copy of the attendance record shall be forwarded by the person or organization that had obtained the course, program or seminar approval to the department within 14 calendar days after completion of the course, program or seminar.

(2) EVIDENCE OF COMPLIANCE. An individual who has completed the installation and inspection training shall be responsible for retaining evidence of achieving the training in order to fulfill the obligations under s. Comm 83.04 (1) (a) and 83.21 (2) (c) 4.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Subchapter II – Administration and Enforcement

Comm 83.20 Purpose. (1) This subchapter establishes the following:

(a) Regulatory processes and procedures which are to be followed when designing, installing or maintaining a POWTS; and

(b) Responsibilities and actions of the various governmental agencies involved with the administration and enforcement of this chapter.

Note: Section 145.20 (1) (a), Stats., states that the governing body of the governmental unit responsible for the regulation of private sewage systems may assign the duties of administering the private sewage system program to any office, department, committee, board, commission, position or employee of that governmental unit.

(2) Nothing in this chapter shall limit the authority and power of a governmental unit in exercising administration and enforcement responsibilities regarding a POWTS, including requiring and issuing other types of permits for activities not covered under this subchapter relating to sanitary permits.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.21 Sanitary permits. (1) GENERAL. (a) Pursuant to ss. 145.135 and 145.19, Stats., the installation or construction of a POWTS may not commence or continue unless all of the following have been fulfilled:

1. The owner of the property on which the POWTS is to be installed possesses a valid sanitary permit.

2. Plan approval for the POWTS has been obtained in accordance with s. Comm 83.22.

(b) The modification of an existing POWTS may not commence or continue unless the owner of the property on which the POWTS is located possesses a valid sanitary permit and has obtained plan approval for the modification under s. Comm 83.22, if the modification involves the addition or replacement of any of the following:

1. A POWTS holding component.

2. A POWTS treatment component.

3. A POWTS dispersal component.

(2) APPLICATION. (a) The application for a sanitary permit shall be made in a format prescribed by the department.

Note: An application for a sanitary permit may be obtained from the governmental unit administering and enforcing this chapter or the department. See appendix for further information relative to the application format and addresses of governmental units and the department.

(b) 1. Except as provided in subd. 2., the application for a sanitary permit shall be submitted to the appropriate governmental unit where the POWTS is located or will be located.

2. The application for a sanitary permit shall be submitted to the department for a POWTS that is located or will be located on property owned by the state.

Note: Section 145.20 (2) (b), Stats., states that the governmental unit responsible for the regulation of private sewage systems shall approve or disapprove applications for sanitary permits and assist applicants in preparing an approvable application.

(c) The application for a sanitary permit to the governmental unit shall be accompanied by all of the following:

1. At least one set of clear and legible plans and specifications delineating the information under s. Comm 83.22 (a) 3. and (c).

2. A set of plans bearing the department's conditional approval and the approval letter issued by the department, if required to be reviewed by the department under s. Comm 83.22 (1).

3. Sufficient supporting information to determine whether the proposed design, installation and management of the POWTS or the proposed modification to an existing POWTS conforms with this chapter.

4. Documentation that the master plumber or the master plumber—restricted who is to be responsible for the installation or modification of the POWTS has completed approved training in the proposed POWTS technology or method, if the application for
the sanitary permit involves one or more of the technologies or
methods specified in s. Comm 83.04 (1).
5. Documentation that maintenance requirements for the pro-
posed POWTS technology or method have been recorded with the
Department for the property, if the management plan for the installation
or modification under s. Comm 83.54 (1) involves one or more of the
following:
   a. Evaluating or monitoring any part of the system at an in-
val of 12 months or less.
   b. Servicing or maintaining any part of the system at an in-
val of 12 months or less.
   c. Any other information as specified by local ordinance
relating to POWTS installations.
7. A fee as specified by the governmental unit.
   Notes: Section 145.19 (2) to (6) reads: "(2) Fine. No fee for sanitary permit may
   be less than $61, or the amount determined under department rule. The governing
   body for the governmental unit responsible for the regulation of private sewage sys-
   tems may establish a fee for a sanitary permit which is more than $61, or the amount
determined under department rule. [Pursuant to s. Comm 2.67 (1), the minimum san-
   itary permit fee is $116."
(3) Copy thereof forwarded to the department. The governmental unit
   responsible for the regulation of private sewage systems shall forward a copy of each
   valid sanitary permit and $20, or the amount determined under department rule, of
   the fee to the department within 90 days after the permit is issued. [Pursuant to s. Comm
   2.67 (3), $30 of the sanitary permit fee must be forwarded to the department.]
(4) Use off site. The portion of the fee retained by the governmental unit respon-
sible for the regulation of private sewage systems shall be used for the administration
of private sewage system programs.
(5) Fee adjustment. The department, by rule promulgated under ch. 227, may
   adjust the minimum permit fee under sub. (2) and the fee portion forwarded under
   sub. (3).
(6) Groundwater fee. In addition to the fee under sub. (2), the governmental unit
   responsible for the regulation of private sewage systems shall collect a groundwater
   fee of $23 for each sanitary permit. The governmental unit shall forward this fee to
   the department together with the copy of the sanitary permit and the fee under sub. (3).
   The moneys collected under this subsection shall be credited to the environmental
   fund for environmental management."
(3) Processing. (a) A sanitary permit may not be issued until the
   plans and specifications have been approved by the depart-
   ment or governmental unit having jurisdiction.
   (b) A governmental unit may not issue a sanitary permit for the
   installation or modification of the POWTS that involves one or
   more of the technologies or methods specified in s. Comm 83.04
   (1) unless the master plumber or the master plumber–restricted
   who is to be responsible for the installation has completed
   approved training on the proposed POWTS technology or method
   in accordance with s. Comm 83.05.
   (c) A governmental unit shall review and make a determina-
   tion on the submission of an application for a sanitary permit
   within 30 days after receiving all the required information and
   fees under sub. (2) (c).
   (d) 1. If upon review of the application and the supporting
   information, the governmental unit or the department determines
   that the proposed design, installation and management of the
   POWTS or the proposed modification of an existing POWTS con-
  forms with this chapter, a sanitary permit shall be issued.
   2. a. If upon review of the application and the supporting
   information, the governmental unit or the department determines
   that the proposed design, installation and management of the
   POWTS or the proposed modification of an existing POWTS does
   not conform with this chapter, a sanitary permit may not be issued.
   b. When the issuance of a sanitary permit is denied, the gov-
   ernmental unit or department reviewing the application should pro-
   vide in writing to the applicant the reasons for denial, a notice for
   the right to appeal and the procedures for appeal.
   c. An applicant denied a sanitary permit by a governmental
   unit may appeal the decision in accordance with ch. 68, Stats.
   d. The appeal of the denial by the department for a sanitary
   permit shall be made in writing within 30 days from the date of the
decision.
   (e) A sanitary permit shall be issued by the appropriate govern-
   mental unit or the department in a format prescribed by the depar-
   tment.
   Notes: See appendix for further information relative to the permit format.
(4) Transfers. A sanitary permit may be transferred from an
owner to a subsequent owner, pursuant to s. 145.135 (1), Stats.
   Notes: Section 145.135 (1), Stats., reads in part: "A sanitary permit may be trans-
ferred from the holder to a subsequent owner of the land, except that the sub-
sequent owner must obtain a new copy of the sanitary permit from the issuing agent."
(5) Expiration. Pursuant to s. 145.135 (1), Stats., a sanitary
permit shall expire 2 years from the date of issuance unless renewed in accordance with sub. (6).
(6) Renewals. (a) 1. The application for renewal of a sanitary
permit shall be made in a format prescribed by the department.
   Notes: See appendix for further information relative to the application for renewal.
   2. The application for renewal of a sanitary permit shall be submitted to the department or the appropriate governmental unit
in accordance with sub. (2) (b).
   (b) The renewal of a sanitary permit shall be contingent upon
   the proposed POWTS or the proposed modification of an existing
   POWTS conforming with the rules of this chapter in effect at the time the sanitary permit is renewed.
(7) Revocation. (a) The department may revoke a sanitary
permit issued under this section for any false statements or mis-
representation of facts on which the sanitary permit was issued.
   (b) A governmental unit may revoke a sanitary permit that the
   governmental unit has issued under this section for any false state-
ments or misrepresentation of facts on which the sanitary permit was
issued.
   (c) The revocation of a sanitary permit and the reasons for
   revocation shall be conveyed in writing to the individual to whom
   the sanitary permit was issued or transferred.
   (d) If a sanitary permit is revoked, the installation or modifi-
cation of a POWTS may not commence or continue until another
sanitary permit is obtained.
(8) Posting. When a sanitary permit is obtained under sub.
(2), the sanitary permit shall:
   (a) Be posted in such a location and manner on the proposed
   site where the POWTS is to be installed or modified so that the
   information on the permit is visible for inspection; and
   (b) Remain posted until:
   1. The POWTS installation or modification is completed, and
   2. An opportunity for a final inspection occurs in accordance
   with s. Comm 83.26.
History: Cr. Register, April, 2009, No. 532, eff. 7–1–09.
Comm 83.22 Plan review and approval. (1) Submission of plans. (a) Plans shall be submitted to the department, a designated agent or the governmental unit in accordance with this section for all of the following types of installations or modifications:
   1. The installation or construction of a POWTS.
   2. The replacement or addition of a POWTS treatment component.
   3. The replacement or addition of a POWTS holding component.
   4. The replacement or addition of a POWTS dispersal component.
   (b) Plans for the types of POWTS delineated in Table 83.22–1 shall be submitted to the department for review.
   (c) Plans for the types of POWTS delineated in Table 83.22–2 shall be submitted for review to the department or a designated agent.
   Notes: See s. Comm 83.23 for more information relative to designated agents.
(d) Plans for the types of POWTS delineated in Table 83.22-3 shall be submitted for review to the appropriate governmental unit where the POWTS is located or will be located.

**2) Plans and Specifications.** (a) 1. When plans are submitted to the department or designated agent for review, at least 3 sets of plans and one set of specifications shall be provided.

*Note: Specifications for a project do not have to be a separate document but may be delineated on the plans.*

2. Plans and specifications submitted for review shall be clear, legible and permanent copies.

3. Plans submitted for review shall include all of the following:

a. Details and configuration layouts depicting how the design is to be constructed and how the design is to accomplish the treatment in accordance with ss. Comm 83.43 and 83.44 and dispersal that is claimed or the holding of wastewater.

b. Specifications, including a description of the materials for the project and the installation or construction practices and methods to be employed.

c. A site plan with a bench mark either scaled or dimensioned, delineating each treatment and dispersal component and their relationship to any items listed in Table 83.43-1.

(b) 1. All plans submitted for review shall be accompanied by sufficient data and information to determine if the proposed POWTS or modification of an existing POWTS and their performance will conform with chs. Comm 82 to 84 including, but not limited to all of the following:

a. A plan review application form specified by the department.

Note: See appendix for an example of the plan review application form.

b. The minimum and maximum wastewater flow and load of the proposed project and the method or rationale for determining the flow and load.

c. Documentation to support treatment and dispersal claims.

d. A management plan for the proposed design reflecting conformance to subch. V.

e. A soil and site evaluation report in accordance with s. Comm 85.40 for those POWTS components that consist in part of in situ soil.

f. A description of a contingency plan in the event the proposed POWTS fails and cannot be repaired.

2. In addition to the information required under subd. 1., plans for one or more holding tanks serving a large commercial, industrial, recreational or residential development with an estimated daily wastewater flow of 3,000 gallons or more shall include information pursuant to s. NR 113.07 (1) (e).

*Note: Section NR 113.07 (1) (e) reads as follows: Large commercial, industrial, recreational or residential holding tank systems that singly or when added together or increased by successive additions generate 3000 gallons of sewage per day or greater shall contract with a wastewater treatment facility for treatment of the sewage. The contract terms shall provide assurance that the septage from the system will continually be conveyed to, and accepted, at the wastewater treatment facility. If a service area designation exists, the wastewater treatment facility shall amend the service area to include the commercial, industrial, recreational or residential development. The department may set a minimum disposal capacity of the department of industry, labor and human relations, or department of commerce, until the service area adjustments have been completed and approved.*

3. In addition to the information required under subd. 1., plans for a POWTS that is to serve a dwelling where the design of the POWTS is not based upon the number of bedrooms within the dwelling shall be accompanied by information documenting that design condition on the deed for the property.

4. In addition to the information required under subd. 1., plans for an experimental POWTS shall be accompanied by information required under s. Comm 83.27 (3).

5. In addition to the information required under subd. 1., plans for a POWTS which is to serve more than one structure or building shall be accompanied by information that does all of the following:

a. Describes the legal entity, public or private, that has responsibility for the operation and maintenance of the POWTS.

b. Includes a copy of a recorded legal document that identifies all the parties that have ownership rights and are responsible for the operation and maintenance of the POWTS.

6. a. In addition to the information required under subd. 1., plans for a POWTS with a design wastewater flow exceeding 12,000 gallons per day shall be not be approved until documentation has been submitted to the department indicating that the department of natural resources has issued a WPDES permit for the project under ch. 283, Stats.

b. Solely for the purpose of determining the applicability of subpar. a., the design wastewater flow of 12,000 gpd shall be deemed equivalent to 85 bedrooms for residential dwellings, including one- and 2-family dwellings, multi-family dwellings and mobile homes.

c. Solely for the purpose of determining the applicability of subpar. a., the design wastewater flow of 12,000 gpd for commercial facilities shall be calculated using the estimated wastewater flows specified in s. A-83.43 (6) of the appendix.

d. Solely for the purpose of determining the applicability of subpar. a., for residential dwellings combined with commercial facilities the design wastewater flow of 12,000 gpd shall be calculated by prorating the number of bedrooms on the basis of 85 bedrooms equaling 12,000 gpd for the residential dwellings and using the estimated flow under s. Comm 83.43 (3) (a) and s. A-83.43 (6).

partner-in-the-profits-of-a-partnership.

(c) Plans and specifications which are required to be submitted
for review under sub. (1) shall be one of the following:

1. Signed and sealed in accordance with s. A–E 2.02 by an
individual who is registered by the department of regulation and
licensing as an architect, engineer, designer or plumbing systems
or designer of private sewage systems.

2. Signed, including license number, and dated by an individual
who is responsible for the installation of the POWTS and who
is licensed by the department as a master plumber or master
plumber-restricted service.

(d) Plans submitted to the department for review shall be
accompanied by a fee in accordance with ss. Comm 2.61 and 2.65.

(3) PLAN REVIEW PROCESS. (a) Time limits. The department
shall review and make a determination on the submission of a plan
within 15 business days after receiving all the required information
and fees.

Note: See appendix for further information regarding the locations of the depart-
ment's offices where plans may be submitted for review.

(b) Conditional approval. 1. If, upon review, the applicable
reviewing agency determines that the plans conform to this chapter
and chs. Comm 82 and 84, a conditional approval shall be
granted in writing.

2. All conditions indicating nonconformance to this chapter
and chs. Comm 82 and 84 shall be corrected before or during installation.

(c) Denial of approval. If, upon review, the applicable reviewing
agency determines that the plans do not conform to this chapter
and chs. Comm 82 and 84, the request for conditional approval
shall be denied in writing.

(4) REVISIONS. (a) A modification to the design of a POWTS
for which a plan has been previously granted approval under sub.
(b) shall be submitted to the applicable reviewing agency for
review in accordance with this section, if the proposed modification
involves any of the following:

1. The replacement or addition of a POWTS treatment com-
ponent.

2. The replacement or addition of a POWTS holding compo-
nent.

3. The replacement or addition of a POWTS dispersal compo-
nent.

4. A change to one or more dispersal components involving
any of the following:

a. Location outside suitable evaluated areas or proposed
depths.

b. Size.

c. Orientation.

d. Type.

(b) The installer of a POWTS may not implement or undertake
the proposed revisions under par. (a) until written approval is
obtained from the applicable reviewing agency.

(c) Revisions to previously approved plans shall be reviewed
in accordance with sub. (3).

(d) If revisions under par. (a) are submitted to and approved
by the department, the owner of the site for the POWTS shall file the
revisions with the county which issued the sanitary permit.

(5) LIMITATION OF RESPONSIBILITY. A conditional approval
of a plan by the department may not be construed as an assumption
by the department of any responsibility for the design of
the POWTS or any component of the system. The department does
not hold itself liable for any defects in construction, or for any
damages that may result from a specific installation.

(6) REVOCATION OF APPROVAL. (a) The department may
revoke any plan approval issued under this section for any false
statements or misrepresentation of facts on which the approval
was based.

(b) The designated agent or governmental unit may revoke any
plan approval issued by the designated agent or governmental
units for any false statements or misrepresentation of facts on
which the approval was based.

(c) The revocation of a plan approval and the reasons for revoca-
tion shall be conveyed in writing to the submitter of the plans
as noted on the application.

(d) If a plan approval is revoked, the installation or alteration
of a POWTS may not continue until another plan approval is
obtained.

(7) EVIDENCE OF APPROVAL. (a) When plans are required to be
approved by the department or designated agent under sub. (1),
the plumber responsible for the installation of a POWTS or the
modification of an existing POWTS shall keep at the construc-
tion site at least one set of plans bearing evidence of approval by
the department or designated agent and at least one copy of specifi-
cations.

(b) The plans and specifications shall be maintained at the
construction site until the POWTS installation or modification
is completed and an opportunity for a final inspection occurs in
accordance with s. Comm 83.26.

(c) The plans and specifications shall be made available to the
department or the governmental unit upon request.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.23. Review agent status. (1) Upon request
from a governmental unit, the department may delegate to the
governmental unit the responsibility to review plans for one or
more of the types of POWTS delineated in Table 83.22–2 which
are to be or are located within the jurisdiction of that governmental
unit.

(2) A request by a governmental unit to review plans for
the types of POWTS delineated in Table 83.22–2 shall be made in
writing. The request shall include all of the following:

(a) The types of POWTS for which delegation is desired.

(b) Information delineating how the plans are to be processed
and reviewed.

(c) Information on how plan review decisions are to be
recorded and maintained.

(3) The delegation of plan review by the department shall be
contingent upon a governmental unit's request demonstrating suf-
cient capabilities to complete the reviews, including all of the follow-

(a) The employment of one or more individuals who are certi-
fied by the department as a POWTS inspector to perform the plan
review.

(b) The involvement of one or more individuals, who are certi-
fied soil testers, to provide assistance in the plan review process.

Note: The requirements of this subsection do not require the employment of 2
individuals to perform plan review. A single individual who holds a certification as
a certified POWTS inspector and as a certified soil tester may fulfill the requirements under pars. (a) and (b).

(4) (a) The department shall provide the governmental unit with a written decision of delegation or denial of delegation relative to a request under this section concerning plan review.

(b) The delegation for plan review shall be contingent upon the governmental unit acknowledging that the submission and review of plans under s. Comm 83.22(1) may, at the discretion of the submitter, be made to the department or the designated agent.

(5) The department shall include as part of governmental unit audits conducted under s. 145.20 (3) (b), Stats., an evaluation of the plan review functions which are delegated to a governmental unit under this section.

(6) A governmental unit that wishes to discontinue the delegated plan review function under this section shall notify the department in writing at least 30 days prior to the discontinuance.

(7) The recognition as a review agent may be revoked by the department in accordance with s. 145.20 (3) (a) 2., Stats.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.24 Petitions for variance. (1) The department shall consider and may grant a variance to a provision of this chapter in accordance with ch. Comm 3.

(2) (a) Pursuant to s. 145.24, Stats., the department may not approve a petition for variance for an existing POWTS which is determined to be a failing private onsite wastewater treatment system.

(b) For the purposes of this subsection, the department shall consider a petition for variance if the existing POWTS is not considered a failing private onsite wastewater treatment system.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.25 Governmental programs. (1) DELEGATION OF RESPONSIBILITIES. (a) Pursuant to s. 145.20 (1) (a), Stats., the delegation by a governmental unit of the administration and enforcement of this chapter to a town sanitary district or public inland lake protection and rehabilitation district shall be by ordinance.

(b) A copy of an ordinance delegating administration and enforcement of this chapter to a town sanitary district or public inland lake protection and rehabilitation district shall be forwarded to the department at least 30 days prior to the effective date of the ordinance.

(2) ISSUANCE OF BUILDING PERMITS. (a) General. Pursuant to s. 66.036, Stats., the issuance of building permits by a municipality for unsewered properties shall be in accordance with this subsection.

Note: See appendix for a reprint of s. 66.036, Stats.

(b) NEW CONSTRUCTION. A municipality may not issue a building permit to commence construction or installation of a structure that necessitates the use of a POWTS to serve the structure, unless:

1. The owner of the property possesses a sanitary permit for the installation of a POWTS in accordance with s. Comm 83.21; or

Note: Section Comm 83.23 outlines the procedures for the issuance of sanitary permits.

2. A POWTS of adequate capacity and capability to accommodate the wastewater flow and contaminant load already exists to serve the structure.

Note: See s. Comm 83.62 and 83.33 concerning the application of current code requirements to existing POWTS.

(c) CONSTRUCTION AFFECTING WASTEWATER FLOW OR CONTAMINANT LOAD. A municipality may not issue a building permit to commence construction of any addition or alteration to an existing structure when the proposed construction will modify the design of the wastewater flow or contaminant load, or both, to an existing POWTS, unless the owner of the property:

a. Possesses a sanitary permit to either modify the existing POWTS or construct a POWTS to accommodate the modification in wastewater flow or contaminant load, or both; or

b. Provides documentation to verify that the existing POWTS is sufficient to accommodate the modification in wastewater flow or contaminant load, or both.

2. For the purpose of this paragraph, a modification in wastewater flow or contaminant load shall be considered to occur:

a. For commercial facilities, public buildings, and places of employment, when there is a proposed change in occupancy of the structure; or the proposed modification affects either the type or number of plumbing appliances, fixtures or devices discharging to the system; and

b. For dwellings, when there is an increase or decrease in the number of bedrooms.

(d) DOCUMENTATION OF EXISTING CAPABILITIES. Documentation to verify whether an existing POWTS can accommodate a modification in wastewater flow or contaminant load, or both, shall include at least one of the following:

1. A copy of the plan for the existing POWTS that delineates minimum and maximum performance capabilities and which has been previously approved by the department or the governmental unit.

2. Information on the performance capabilities for the existing POWTS that has been recognized through a product approval under ch. Comm 84.

3. A written investigative report prepared by an architect, engineer, designer of plumbing systems, designer of private sewage systems, master plumber, master plumbere-restricted service or certified POWTS inspector analyzing the proposed modification and the performance capabilities of the existing POWTS.

(e) SETBACKS. A municipality may not issue a building permit for construction of any structure or addition to a structure on a site where there exists a POWTS, unless the proposed construction conforms to the applicable setback limitations under s. Comm 83.43 (8) (f).

2. The applicant for a building permit shall provide documentation to the municipality issuing the building permit showing the location and setback distances for the proposed construction relative to all of the following:

a. Existing POWTS treatment components.

b. Existing POWTS holding components.

c. Existing POWTS dispersal components.

Note: A municipality which issues building permits may delegate to the governmental unit responsible for issuing sanitary permits the determination of whether the proposed construction will affect or interfere with an existing POWTS relating to capability or location of the existing POWTS.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.26 Inspections and testing. (1) Pursuant to s. 145.02 (3) (c), Stats., the department or governmental unit may inspect the construction, installation, operation or maintenance of a POWTS to ascertain whether the POWTS conforms to plans approved by the department or governmental unit, the conditions of approval and this chapter.

(b) The department may issue an order directing an immediate cessation of the installation of a POWTS or the modification to an existing POWTS for failure to comply with a corrective order.

(c) Pursuant to ss. 145.02 (3) (f) and 145.20 (1) (a) and (2) (f), Stats., an individual authorized by the department or a governmental unit to administer and enforce this chapter may issue orders to abate human health hazards relating to this chapter.

Note: Section Comm 3.66 delineates qualifications and responsibilities for public health inspectors.

(d) Pursuant to s. 145.20 (2) (e) and (g), Stats., nothing in this chapter shall limit a governmental unit's authority and power to
inspect or require an evaluation of a POWTS, including an existing POWTS at times or for activities not covered under this section.

(2) (a) When a sanitary permit is required under s. Comm 83.21 (1), no part of a POWTS component may be covered nor any POWTS component put into service until the governmental unit or the department has had an opportunity to inspect the system in accordance with this subsection.

Note: Pursuant to s. 145.20 (2), Stats., an individual authorized by a governmental unit to administer and enforce the provisions of ch. Comm 82 to 87relative to POWTS is required to be a certified POWTS inspector under s. Comm 5.66.

(b) The master plumber or the master plumber—restricted service responsible for the installation of a POWTS or the modification to an existing POWTS shall notify the governmental unit when the work will be or is ready for inspection. The notification shall be in person, in writing or by telephone or other electronic communication in a format acceptable to the governmental unit performing the inspection.

(c) The master plumber or the master plumber—restricted service responsible for the installation of a POWTS or the modification shall maintain records of the inspection notifications. The records shall include the date and time of notification and the name of the person contacted.

(d) The master plumber or master plumber—restricted service responsible for the POWTS installation or modification shall provide the necessary equipment and properly licensed personnel required for the inspection as requested by the governmental unit or department.

(e) If an inspection is not made by the end of the next workday, excluding Saturdays, Sundays and holidays, after the requested inspection day, the master plumber or the master plumber—restricted service may proceed with the installation of the POWTS, including backfilling and covering.

(3) Pursuant to s. 145.20 (2) (g), Stats., a governmental unit by ordinance may require other inspections in addition to that specified under this section.

(4) A governmental unit shall maintain a written record of each inspection conducted for a POWTS. The record shall include information relative to all of the following:

(a) The location of the POWTS.
(b) The date of the inspection.
(c) The nature and findings of the inspection.

(5) Before being put into service, components of a POWTS shall be tested in accordance with the manufacturer’s specifications or as specified as a condition of approval under ss. Comm 83.22 and 84.10.

History: Cr. Register, April, 2000 No. 532, eff. 7-1-00.

Comm 83.27 Experiments. (1) The provisions of this chapter in ch. Comm 84 are not intended to prevent the design and use of an innovative method or concept for the treatment or dispersal of domestic wastewater which is not specifically addressed by this chapter, provided the experiment has been first approved by the department in accordance with s. Comm 84.50 (3).

(2) The department shall review a submittal of an experiment under this section with input from the technical advisory committee assembled under s. Comm 84.10 (3) (d).

(3) The protocol for a proposed experiment submitted to the department for consideration shall include all of the following:

(a) The experiment shall be supervised by a professional who has experience in small-scale wastewater treatment.

(b) The professional shall submit a vita of training and experience relative to small-scale wastewater treatment along with the application for the experiment.

(c) A proposal shall be submitted for the experiment that includes at least the following:

1. The purpose of the experiment.
2. The theory and science behind the proposed experiment including a description of the systems or processes to be used as part of the experiment.
3. The number of systems or components to be installed or modified as part of the experiment.
4. The identification of the initial sites, if known, that will take part in the experiment.
5. A letter of comment from the governmental unit or units where the experiment is to be conducted.
6. The data to be collected and the method to be employed to collect the data.
7. The duration of the proposed experiment.
8. The experiment may not involve less than 5, and not more than 50 individual installations.
9. An experiment shall be designed to provide definitive results within 5 years from the start of the experiment.
(f) An experiment on a site not previously developed shall include a contingency plan that provides for a code complying replacement POWTS, if the experiment fails to meet the required performance standards of this chapter.
(g) If the experiment is approved, the experimenter shall execute a signed agreement with the department setting forth the obligations of the parties.

(h) Within 6 months of the completion of the experiment, the results or conclusions shall be forwarded to the department.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.28 Penalties. Penalties for violations of this chapter shall be assessed in accordance with s. 145.12, Stats.

Note: Section 145.12 (4), Stats., indicates that any person who violates any order under s. 145.02 (3) (f) or 145.20 (2) (f) or any rule or standard adopted under s. 145.13 shall forfeit not less than $10 nor more than $1,000 for each violation. Each violation of an order under s. 145.02 (3) (f) or 145.20 (2) (f) or any rule or standard adopted under s. 145.13 constitutes a separate offense and each day of continuing violation is a separate offense.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.29 Range of responses. (1) (a) Pursuant to s. 160.21, Stats., the department may respond with any one or more of the actions delineated under Table 83.29 if the preventative action limits or enforcement standards enumerated in ch. NR 140 Tables 1 and 2 are exceeded at a point of standards application as a result of the performance of a POWTS, including a POWTS existing prior to July 1, 2000, except as provided in par. (b).

(b) Pursuant to s. 160.255, Stats., the design, installation use or maintenance of a POWTS is not required to comply with the nitrate standard specified in ch. NR 140 Table 1, except as provided under s. Comm 83.03 (5).

(2) Pursuant to s. 160.21 (2), Stats., the point of standards application relative to the performance of POWTS shall be:
Comm 83.41

Subchapter IV – Design and Installation

Comm 83.40 Purpose. This subchapter establishes minimum parameters for the design and installation of a POWTS for the purpose of:

(1) Safeguarding public health;
(2) Minimizing the level of substances which have a reasonable probability of entering waters of the state; and
(3) Delineating measures, conditions and performance standards by which to evaluate designs.

History: Cr. Register, April, 2006, No. 532, eff. 7-1-00.

Comm 83.41 Principles. (1) A POWTS shall be designed to hold wastewater or reduce the contaminant load and disperse the flow of wastewater as specified in this subchapter.

(2) A POWTS shall be designed to have sufficient capacity to accommodate the anticipated quantities of wastewater that will be discharged into the system.
(3) A POWTS intended to treat and disperse wastewater shall be designed to have sufficient ability to treat or separate out the anticipated types, quantities and concentrations of wastewater contaminants to be discharged into the system so that the dispersed wastewater will not create a human health hazard.

(4) A POWTS shall be designed to disperse wastewater below the surface of the ground at a rate that promotes long term assimilation into the soil and limits the possibility of surfaceing.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.42 Application. (1) DESIGN BASIS. The design of a POWTS shall be based on the methods and limitations outlined in this subchapter or on other documented data acceptable to the department.

(2) DESIGN RELATION TO ACTUAL FLOWS AND CONTAMINANT LOADS. For any situation where it is known that the wastewater flow or contaminant load exceeds the parameters of this subchapter, the POWTS shall be designed in relation to the known flow or load.

(3) DESIGN CONSIDERATIONS. The evidence to support assertions relative to contaminant reduction and hydraulic dispersal shall include at least all of the following:

(a) The flow and contaminant load of the influent wastewater.

(b) The ability of all treatment and dispersal components to reduce contaminant load and disperse hydraulic flow into the environment.

(c) The flow velocities and friction losses throughout the system based upon accepted engineering practice.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.43 General requirements. (1) MATERIALS. The components of a POWTS shall be constructed of materials and products that are of a type recognized under this chapter or ch. Comm 84.

(2) DESIGN FLOW. In order to accommodate peak wastewater flow, the design wastewater flow of a POWTS shall equal at least 150% of the estimated daily flow generated from the source or sources.

(3) ESTIMATED DAILY COMBINED FLOW FOR A POWTS SERVING A DWELLING. The estimated daily wastewater flow of combined graywater, clear water and blackwater from a dwelling shall be based on one or more of the following:

(a) The following equation:

\[ 100 \text{ gallons} \times B = F \]

Where:

\( B \) = number of bedrooms, based on 2 persons per bedroom, unless otherwise approved by the department.

\( F \) = Estimated daily wastewater flow per dwelling per day (in gallons), excluding storm water discharges.

(b) A detailed estimate of wastewater flow based upon per capita occupancy or usage of the dwelling or per function occurrence within the dwelling.

(4) ESTIMATED DAILY SEGREGATED GRAYWATER FLOW FOR A POWTS SERVING A DWELLING. The estimated daily wastewater flow of graywater and clear water from a dwelling shall be based on one or more of the following:

(a) The following equation:

\[ 60 \text{ gallons} \times B = F \]

Where:

\( B \) = number of bedrooms, based on 2 persons per bedroom, unless otherwise approved by the department.

\( F \) = Estimated daily graywater flow per dwelling per day (in gallons), excluding storm water discharges.

(b) A detailed estimate of graywater flow based upon per capita occupancy or usage of the dwelling or per function occurrence within the dwelling.

(5) ESTIMATING SEGREGATED BLACKWATER FLOW FOR A POWTS SERVING A DWELLING. The estimated daily wastewater flow of blackwater from a dwelling shall be based on one or more of the following:

(a) The following equation:

\[ 40 \text{ gallons} \times B = F \]

Where:

\( B \) = number of bedrooms, based on 2 persons per bedroom, unless otherwise approved by the department.

\( F \) = Estimated daily blackwater flow per dwelling per day (in gallons).

(b) A detailed estimate of blackwater flow based upon per capita occupancy or usage of the dwelling or per function occurrence within the dwelling.

(6) ESTIMATING WASTEWATER FLOW FOR COMMERCIAL FACILITIES. The estimated daily wastewater flow of graywater, blackwater, or combined graywater-blackwater flow from commercial facilities shall be based on one or more of the following:

(a) Measured daily wastewater flow over a period of time representative of the facility’s use or occupancy.

(b) A detailed estimate of wastewater flow based upon per capita occupancy or usage of the facility or per function occurrence within the facility.

Note: See appendix for further information.

(7) ESTIMATING CONTAMINANT LOADS. Estimates of contaminant loads from dwellings and public facilities shall be based on a detailed analysis including all contaminants listed in s. Comm 83.44 (2) (a).

Note: See appendix for further information.

Note: See Note under s. Comm 83.35 (3) for information relative to industrial wastes.

(8) GENERAL DESIGN REQUIREMENTS. (a) Flow velocity. 1. Piping within a POWTS shall be designed and installed to supply wastewater to POWTS treatment and dispersal components while maintaining the velocity required to ensure operation of the POWTS.

2. Gravity flow piping between POWTS components shall be installed at a pitch that produces a computed flow velocity of at least one foot per second when flowing half full.

3. Pressurization equipment or devices and piping to be utilized upstream of a POWTS treatment or dispersal component consisting in part of in situ soil shall be designed and installed to produce a computed velocity of at least 2 feet per second.

4. Gravity piping within a POWTS treatment or dispersal component consisting in part of in situ soil shall be installed level or pitched downstream a maximum 4 inches per 100 feet.

(b) Distribution and drain pipe sizing. The piping within a POWTS shall be of a diameter to permit the operation of the POWTS.

(c) Frost protection. All POWTS components shall be protected from freezing temperatures that could detrimentally affect component operation to provide wastewater conveyance, treatment or dispersal.

(d) Component placement. The orientation of a POWTS treatment or dispersal component consisting in part of in situ soil shall take into account landscape variations in elevation, slope orientation, and other conditions that could affect component performance relative to dispersal or aeration.
(e) Alarms or warning systems. 1. a. A POWTS component utilizing a mechanical device to treat wastewater or to distribute effluent shall be provided with an automatic visual or audible means of notifying the user of the POWTS of the failure of the mechanical device.

   Note: In accordance with s. Comm 16.28, an alarm that is electrically powered is to be a separate circuit from the circuit supplying power to the mechanical device.

   b. An alarm indicating the failure of a pump shall remain audible or visible until manually turned off.

   c. Where duplex pumping equipment is employed to provide continuous component operation in the event that one pump fails, the pumps shall be installed in such a manner as to provide the continuous operation automatically.

   2. A POWTS holding tank shall be provided with an automatic visual or audible means of notifying the user of the POWTS of the necessity for servicing.

   (f) Accessibility. The design of a POWTS shall include provisions to provide access to all components that require maintenance or observation.

   (g) Anchoring system components. An exterior subsurface POWTS treatment tank or POWTS holding component to be installed in an area subject to saturated conditions shall be installed so as to prevent flotation of the tank or component.

   Note: See appendix for further information.

   (h) Treatment byproducts. 1. All treatment byproducts discharged from or as a result of operating a POWTS shall be disposed of so as not to create a human health hazard.

   Note: The disposal of the contents of holding tanks and the sludge, scum, and contaminated liquids from treatment tanks and components is regulated by the department of natural resources under chs. NR 113 and NR 204.

2. Deleterious or hazardous materials segregated out from effluent flows shall be disposed of in a manner conforming with the rules of the state agency having jurisdiction.

3. Effluent from a POWTS shall be dispersed so as not to create a human health hazard.

4. All POWTS components within a building or structure shall be gas tight unless provisions are made assuring the safety of individuals entering the building or structure.

   (i) Site parameters and limitations. POWTS treatment, holding and dispersal components shall be located so as to provide the minimum horizontal setback distances as outlined in Table 83.43-1 as safety factors for public health, waters of the state and structures in the event of component failure.

   Note: Chapter NR 812 establishes upslope location criteria for wells relative to contamination sources.

<sup>a</sup> Except camping unit transfer containers.

<sup>b</sup> See s. Comm 84.43 (g) (f) relative to accessibility.

<sup>c</sup> Portions of chs. NR 811 & 812 are reprinted in this appendix.

Note: The department of transportation under s. Trans 233.08 establishes setback limits from the centerline of state trunk highways or connecting highways to structures and improvements which include septic systems.

   (j) Service suction and discharge lines. 1. A suction line or discharge line serving a holding tank for servicing purposes shall comply with all of the following:

   a. A pipe serving as the suction or discharge line shall be of an acceptable type in accordance with ch. Comm 84.

   b. A suction or discharge line shall terminate with a service port consisting of a quick disconnect fitting with a removable plug.

   c. The service port of a suction or discharge line shall terminate at least 2 feet above finish grade.

   d. The service port of a suction or discharge line shall be identified as such with a permanent sign with lettering at least ½ inch in height.

   e. The service port of a suction or discharge line shall be secured to a permanent support that is capable of withstanding the loads and forces placed on the port.

   f. A suction or discharge line shall be at least 3 inches in diameter.

   2. A suction line serving a holding tank may not be installed in such a manner or arrangement that the tank can be drained by gravity or siphonic action.

3. Where a lift station is employed for servicing a holding tank, the pump discharge line shall conform with subd. 1., except as provided in subpars. a. and b.

### Comm 83.44 Parameters for POWTS components consisting of in situ soil.

1. **Evaluation.** POWTS treatment and dispersal components consisting in part of in situ soil shall be evaluated in accordance with ch. Comm 85.

   2. **Influent Quality.** (a) The quality of influent discharged into a POWTS treatment or dispersal component consisting in part of in situ soil shall be equal to or less than all of the following:

      1. A monthly average of 30 mg/L fats, oil and grease.
      2. A monthly average of 220 mg/L BOD<sub>5</sub>.
      3. A monthly average of 150 mg/L "TSS."

   (b) The monthly average under par. (a) shall be calculated as the sum of all measurements taken over 30 consecutive days, with at least 6 measurements occurring on 6 separate days, and divided by the number of measurements taken during that period.

   (c) Influent discharged to a POWTS treatment or dispersal component that consists in part of unsaturated soil may not contain any solid or suspended solid exceeding 1/8 inch in diameter.

3. **Infiltrative Surface.**

   (a) The infiltrative surface of unsaturated soil to which influent is discharged shall be located at least 24 inches above the estimated highest groundwater elevation and bedrock.

   (b) At least 6 inches of the 24-inch soil separation required under par. (a) shall be an in situ soil type for which soil treatment capability has been credited under Table 83.44–3.
2. The purpose of the 6 inches of in situ soil under subd. 1. shall be to assure that the influent will be assimilated into subsurface soils without ponding on the ground surface.

(c) The infiltrative surface of unsaturated soil to which influent is discharged shall be located at least one inch below the finished grade.

(4) Capabilities. (a) 1. a. Except as provided under subd. 2., the dispersal capability of a POWTS treatment or dispersal component consisting in part of unsaturated soil shall be limited to that specified in Table 83.44–1 or Table 83.44–2 based upon the influent quality concentrations being applied.

b. Under subd. 1. a., the influent quality parameter with the highest concentration shall determine the maximum application rate.

c. Except as provided in par. (c), the soil conditions at the infiltrative surface of unsaturated soil to which influent is to be discharged shall be used to establish the maximum application rate for a POWTS dispersal design.

d. The moist soil consistence of the soil horizon in which the infiltrative surface of a POWTS treatment or dispersal component will be located may not be stronger than firm or any cemented classification.

e. The maximum soil application for soil with moderate to strong platy structure shall not exceed 0.2 gals./sq. ft./day for effluent concentrations of ≤30 mg/L BOD₅ and TSS and shall be 0.0 gals./sq. ft./day for effluent concentrations of > 30 mg/L BOD₅ and TSS.

f. The application rates specified under Table 83.44–1 shall only be recognized where the percolation results have been filed with the governmental unit before July 2, 1994.

2. Maximum soil application rates other than those specified in Tables 83.44–1 or 83.44–2 may be employed for the design of a POWTS treatment or dispersal component consisting in part of in situ soil if documentation is submitted and approved under s. Comm 83.22 and is based on soil permeability and evapotranspiration estimates correlated to specific soil characteristics described in a detailed morphological soil evaluation.

(b) The treatment capability of a POWTS treatment component consisting of unsaturated soil shall be limited to that specified in Table 83.44–3, unless otherwise approved by the department.

(c) The design of a treatment or dispersal component consisting in part of in situ soil shall reflect restrictive soil horizons that affect treatment or dispersal.

(5) Effluent Distribution. (a) The distribution of effluent to a treatment or dispersal component consisting of silt loam or finer soil material with weak platy or massive structure shall be accomplished by means of pressurized distribution.

(b) 1. The distribution of effluent to in situ soil shall be accomplished by means of pressurized distribution, if the value for BOD₅, TSS and fecal coliform of the effluent is equal to or less than all of the following:

a. A monthly average of 30 mg/L BOD₅.

b. A monthly average of 30 mg/L TSS.

c. A monthly geometric mean of 10⁴ fecal coliform cfu per 100 ml.

Note: "CFU" means colony forming units.

2. The geometric mean under subd. 1. c. shall be determined on the basis of measurements taken over 30 consecutive days, with at least 6 measurements occurring on 6 separate days.

(c) Each dose of effluent by means of pressurized distribution into a treatment or dispersal component consisting in part of in situ soil may not be less than 5 times the void volume of the POWTS distribution laterals.

(6) Orientation. (a) 1. The infiltrative surface of a distribution cell within a POWTS treatment or dispersal component consisting in part of in situ soil shall be located in fill material above original grade shall be level.

2. The longest dimension of a POWTS treatment or dispersal component consisting in part of in situ soil shall be oriented along the surface contour of the component site location unless otherwise approved by the department.

Note: See appendix for an illustration depicting a distribution cell.

(b) The infiltrative surface of a distribution cell within a POWTS treatment or dispersal component consisting in part of in situ soil and located below the surface of the original grade shall be level.

(c) POWTS treatment or dispersal components consisting in part of in situ soil shall be so located as to minimize the infiltration of storm water into the component.

(7) Geometry. The geometry of a subsurface treatment or dispersal component consisting in part of the in situ soil shall take into account linear loading rates that are based on soil texture, structure, consistency and distance to seasonal soil saturation and restrictive soil horizons.

**Subchapter V – Management**

Comm 83.50 Purpose. The purpose of this subchapter is to:

(1) Establish monitoring and maintenance requirements for POWTS in order to ensure that POWTS will operate as designed and thereby protect the public health and the waters of the state; and

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.
(2) Provide the department with data by which to make regulatory decisions.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.51 Principles. (1) A POWTS, including a POWTS existing prior to July 1, 2000, shall be maintained at all times so as not to create a human health hazard.

(2) When upon inspection of a POWTS, including a POWTS existing prior to July 1, 2000, any part of the system that is found to be defective in conformance with the applicable provisions of this chapter, the installation or modification plan, or the approvals, the part shall be repaired, renovated, replaced or removed.

Note: Section Comm 87.60 (3) bn14 also establishes management and maintenance requirements for a POWTS that is located in a governmental unit which participates in the replacement and rehabilitation program under s. 145.245, Stats.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.52 Responsibilities. (1) (a) The owner of a POWTS shall be responsible for ensuring that the operation and maintenance of the POWTS occurs in accordance with this chapter and the approved management plan under s. Comm 83.54 (1).

(b) The owner of a POWTS existing prior July 1, 2000, shall be responsible for ensuring that the maintenance of the POWTS occurs in accordance with s. Comm 83.54 (4).

(c) 1. The owner of a POWTS, including a POWTS existing prior to July 1, 2000, shall maintain a maintenance or service contract with a POWTS maintainer or a business utilizing a POWTS maintainer for the POWTS as long as the POWTS is utilized and, if the management plan for the POWTS under s. Comm 83.54 (1) involves one or more of the following:

(a) Evaluating or monitoring any part of the system at an interval of 12 months or less.

(b) Maintaining any part of the system at an interval of 12 months or less.

2. The owner of a POWTS, including a POWTS existing prior to July 1, 2000, shall maintain a maintenance or service contract with a certified septic servicing operator under ch. NR 114 for the POWTS as long as the POWTS is utilized and, if the management plan for the POWTS under s. Comm 83.54 (1) involves the servicing of any holding, treatment or dispersal component at an interval of 12 months or less.

(2) A POWTS, including a POWTS existing prior to July 1, 2000, that is not maintained in accordance with the approved management plan or as required under s. Comm 83.54 (4) shall be considered a human health hazard.

(3) The activities relating to evaluating and monitoring mechanical POWTS components after the initial installation of the POWTS in accordance with an approved management plan shall be conducted by a person who holds a registration issued by the department as a registered POWTS maintainer.

Note: See s. Comm 5.36 concerning the application and qualification requirements to become a registered POWTS maintainer.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.53 General. (1) No product for chemical or physical restoration or chemical or physical procedures for POWTS, including a POWTS existing prior to July 1, 2000, may be used unless approved by the department in accordance with ss. Comm 84.10 and 84.13.

(2) Nothing in this subchapter shall limit a governmental unit's authority and power in establishing a mandatory POWTS maintenance program, including management or maintenance undertaken by the governmental unit.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.54 Management requirements. (1) MANAGEMENT PLAN. (a) The management plan for each POWTS shall include information and procedures for maintaining the POWTS to operate and function within the standards of this chapter and as designed and approved.

(b) The management plan for a POWTS shall be a part of the plan submittal under s. Comm 83.22 or 84.10.

(c) The management plan for POWTS shall specify all necessary maintenance and servicing information which may include, but is not limited to all of the following:

1. Accumulated solids or byproduct removal requirements.

2. Influent quantities and qualities and effluent quantities and qualities.

3. Metering, sampling and monitoring schedules and requirements.

4. Load and rest schedules.

5. Servicing frequency requirements.

6. Installation and inspection checklists.

7. Evaluation, monitoring and maintenance schedules for mechanical POWTS components.

8. Startup and shutdown procedures.

(d) If the owner of the POWTS wishes to operate or maintain a POWTS differently than that specified in the approved management plan, a written request for approval to amend the management plan shall be submitted to the agency that initially reviewed the installation plan under s. Comm 83.22.

(2) METERING AND MONITORING. (a) General. The management plan specified in sub. (1) shall include the metering or monitoring of POWTS influent or effluent as specified in this subsection.

(b) Department option. The department may require the metering or monitoring of any POWTS to evaluate the operation of the POWTS.

(c) Required influent metering. Influent flow meters shall be installed in accordance with par. (d), if a POWTS:

1. Includes one or more holding tanks, except camping unit transfer containers;

2. Receives wastewater of a type exceeding the quality limits in s. Comm 83.44 (2), except from one- and 2-family dwellings; or

3. Is required by a POWTS component manufacturer.

(d) Metering influent flows. 1. Influent flows to POWTS shall be metered by one of the following methods:

(a) Installing event counters and elapsed time meters.

(b) Installing water meters to meter the water distribution system flow to the POWTS.

(c) Metering wastewater flow from all parts of the plumbing system discharging to the POWTS.

(d) Metering the water distribution system and metering exterior hydrant use, except as provided in subd. 2.

2. Where meters are installed on water distribution systems existing prior to July 1, 2000, the entire water distribution system may be metered and the exterior hydrant usage estimated and subtracted from the total flow to meet the requirements of this paragraph.

(e) Monitoring influent and effluent loads. 1. When and where the monitoring of groundwater is required, groundwater monitoring wells constructed in accordance with ch. NR 141 shall be utilized.

2. When influent or effluent contaminants are to be monitored, samples shall be collected in accordance with the requirements of the approved management plan or, where no procedures are specified, in accordance with published sampling procedures accepted by the department.

Note: Acceptable sampling procedures include those contained in the following sources:

(2) The inspection, maintenance and servicing reports required under sub. (1) shall be submitted to the department or designated agent:
   (a) In a manner specified by the department or designated agent;
   (b) Within 10 business days from the date of inspection, maintenance or servicing; and
   (c) By the owner or the owner’s agent.
(3) The inspection, maintenance and servicing reports required under sub. (1) shall include the following information:
   (a) A POWTS identifying number.
   (b) The location of the POWTS.
   (c) The date of inspection, maintenance or servicing.
   (d) The license, certification or registration number of the individual performing the inspection, maintenance or servicing.
   (e) Other information required by the approved management plan.
(4) The department or designated agent may require verification of any information contained in a inspection, maintenance and servicing report.

Note: This subsection does not require the maintaining of test data which is collected voluntarily and which is not being collected to determine compliance with this chapter.

(5) Department responsibility. (a) The department shall maintain records relating to the inspection, maintenance and servicing of POWTS as specified in this section for a period of not less than 6 years.
   (b) Upon request by a governmental unit and the agreement of the department, the governmental unit may delegate to the department the responsibility to maintain records relating to the inspection, maintenance and inspection [servicing] of POWTS as specified in this section.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Subchapter VI – Recognized Methods and Technologies

Comm 83.60 Purpose. (1) This subchapter identifies specific types of methods and technologies that have been recognized by the department under the voluntary product approval process in s. Comm 84.10 (3) to conform with subchs. IV and V and that may be utilized in the design of POWTS for a specific project.

Note: Subsection Comm 84.10 (3) delineates a process for the voluntary submission of new methods and technologies that are proposed to be utilized in POWTS designs, treatment or disposal components and for the department’s evaluation of such submissions. Methods and technologies recognized under this process may be utilized in any POWTS within the specifications and parameters of the method or technology. Methods and technologies recognized under this process do not require the submission of data at the time of plan review and approval process under s. Comm 83.22 to substantiate the performance of the specific method or technology.

(2) This subchapter does not limit the use of other methods and technologies for POWTS or POWTS components the performance of which has been recognized under the plan review and approval process of s. Comm 83.22 or the voluntary product approval process of Comm 84.10 (3) or both.

Comm 83.55 Reporting requirements. (1) The owner of a POWTS or his or her agent shall report to the department or department authorized agent at the completion of each inspection, maintenance or servicing event specified in the approved management plan, except for camping [unit] transfer containers.
   (b) The owner of a POWTS existing prior to July 1, 2000, or their agent shall report to the department or designated agent shall report to the department or designated agent the completion of each inspection, maintenance or servicing event required under s. Comm 83.54 (4), except for camping [unit] transfer containers.

Note: See appendix for information on obtaining copies of the above manuals from the department. Subsection Comm 84.10 (3) (c) delineates the circumstances under which additional methods or technologies will be specifically enumerated under this section, s. Comm 83.61.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.62 Parameters for using acceptable methods and technologies. When a design of a POWTS for a specific project utilizes a method or technology recognized under s. Comm 84.10 (3), a deviation from the specifications and limitations relative to the installation and maintenance of that method or technology shall constitute a violation of this chapter.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Subchapter VII - Department Performance Monitoring

Comm 83.70 Purpose. (1) To address the desire for an ongoing source of information on the performance of POWTS system designs, the department shall maintain an ongoing performance—monitoring program for the various POWTS methods and technologies. The monitoring program shall be in addition to the periodic inspection and monitoring of POWTS under subch. V. The monitoring program shall be coordinated by the department in conjunction with the ongoing POWTS experimental and research program.

(2) The purpose of the performance monitoring program is to:

(a) Provide additional information on the long-term performance of the various POWTS methods and technologies, to confirm their reliability, and to provide data for improvements; and

(b) Monitor the various methods and technologies relative to long-term compliance with the groundwater standards.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.

Comm 83.71 Department procedures. (1) Both currently installed POWTS and newly installed POWTS may be included in the performance monitoring program conducted by the department.

(2) The department may include both the performance of individual POWTS treatment components as well as the output of components at the edge of the design treatment zone as part of the monitoring program.

(3) The department shall support the performance—monitoring program from Wisconsin Fund allocations and program revenue funds generated from POWTS plan review and sanitary permits. If funds for this purpose become available from other sources, those funds may be used to support the monitoring program.

(4) The department shall utilize the technical advisory committee assembled under s. Comm 84.10 (3) (c) 2. to advise the department on the performance—monitoring program. The committee shall advise the department in at least the following areas:

(a) Development of performance monitoring protocols.

(b) Selection of the POWTS methods and technologies to be monitored.

(c) Identification of funding sources.

(d) The interpretation of the results of the monitoring program.

(5) The decision by the department on the number, types and locations of methods and technologies to be monitored shall take into consideration at least the following factors:

(a) The availability of other scientific data on the performance of a specific method or technology.

(b) The number times of each method or technology may be utilized annually.

(c) The likelihood that the method or technology will be adapted for soil and site conditions not previously utilized.

(d) The availability of funds.

(e) The risk factors associated with public health concerns and groundwater and surface water standards.

(6) The initial performance monitoring program undertaken by the department shall emphasize at least the following two circumstances:

(a) Monitoring where there is a high density of systems. Note: The initial focus would be on subdivisions with lots of 1.5 acres or less.

(b) Monitoring where the depth of suitable in situ soil is near the minimum 6 inches specified under s. Comm 83.44 (3) (b) 1.

(7) (a) The department shall prepare an annual written report of performance—monitoring activities undertaken and the results of those activities.

(b) The report under par. (b) shall be prepared annually and provided to the groundwater coordinating council assembled under s.160.50, Stats.

(c) The department shall prepare the first report no later than December 31, 2001.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.
The material and information contained in this appendix is for clarification purposes only. Appendix material and information are numbered to correspond to the rule number as it appears in the text of the code. Material and information included in this appendix is subject to change without notice, including names, addresses, phone numbers and forms, and reflects information known at the time of publication.

A–83.21 (2) APPLICATION. The specific format of a sanitary permit application is specified by the department and may change depending on the data tracking needs of the department. The uniform application form issued by the department is to be used by all permit issuing agents. It may consist of a paper or electronic format, or both. The sanitary permit application form will require the applicant to report information pertinent to the ownership, use, location, system type, maintenance schedule, and responsible installer. Additionally, plans and specifications for the project must also be submitted with, and are part of, the permit application. Fees for the sanitary permit are based on a statutory minimum as cited in s. 145.19(2), Wis. Stats. and any additional costs levied by the issuing agent.

A–83.21 (3) PROCESSING. The state sanitary permit is issued when evidence and documentation is presented by the owner of the property that minimum code standards have been or will be met.
### SANITARY PERMIT APPLICATION

**In accordance with Comm 83.05, Wis. Adm. Code**

- Attach complete plans (to the county copy only) for the system, on paper not less than 8 1/2 x 11 inches inside.
- See reverse side for instructions for completing this application.

Chapter 145 Wisconsin Statutes provides some direction as to the issuance of sanitary permits as follows:

145.135 Sanitary permits.

(1) Validity. In this section, “sanitary permit” means a permit issued by the department or any governmental unit responsible for the regulation of private sewage systems for the installation of a private sewage system. No person may install a private sewage system unless the owner of the property on which the private sewage system is to be installed holds a valid sanitary permit. A sanitary permit is valid for 2 years from the date of issue and renewable for similar periods thereafter. A governmental unit responsible for the regulation of private sewage systems may not charge more than one fee for a sanitary permit or the renewal of a sanitary permit in any 12-month period. A sanitary permit shall remain valid to the end of the established period, notwithstanding any change in the state plumbing code or in any private sewage system ordinance during that period. A sanitary permit may be transferred from the holder to a subsequent owner of the land, except that the subsequent owner must obtain a new copy of the sanitary permit from the issuing agent. The results of any percolation test or other test relating to the disposal of liquid domestic wastes into the soil shall be retained by the governmental unit responsible for the regulation of private sewage systems where the property is located. The governmental unit responsible for the regulation of private sewage systems shall make the test results available to an applicant for a sanitary permit and shall accept the test results as the basis for a sanitary permit application unless the soil at the test site is altered to the extent that a new soil test is necessary.

(2) Notice. A sanitary permit shall include a notice displayed conspicuously and separately on the permit form, to inform the permit holder that:

(a) The purpose of the sanitary permit is to allow installation of the private sewage system described in the permit.

(b) The approval of the sanitary permit is based on regulations in force on the date of approval.

(c) The sanitary permit is valid and may be renewed for a specified period.

(d) Changed regulations will not impair the validity of a sanitary permit.

(e) Renewal of the sanitary permit will be based on regulations in force at the time renewal is sought, and that changed regulations may impede renewal.

(f) The sanitary permit is transferable.

145.19 Sanitary permit.

(1) Requirement; Information; Forms. No septic tank may be purchased and no private sewage system may be installed unless the owner of the property on which the private sewage system is to be installed holds a valid sanitary permit from the governmental unit responsible for the regulation of private sewage systems in which the property is located. The department shall prescribe the information to be included in the sanitary permit and furnish sanitary permit forms to the governmental unit. The applicant shall submit the completed sanitary permit to the governmental unit. The governmental unit shall approve or disapprove the sanitary permit according to the rules promulgated by the department under this chapter. No person may sell at retail, as defined under s. 100.201 (1) (d), a septic tank for installation in this state unless the purchaser holds a valid sanitary permit issued under this section.

(2) Fee. No fee for a sanitary permit may be less than $61, the amount determined under department rule. The governing body for the governmental unit responsible for the regulation of private sewage systems may establish a fee for a sanitary permit which is more than $61, or the amount determined under department rule.

(3) Copy of permit forwarded to the department. The governmental unit responsible for the regulation of private sewage systems shall forward a copy of each valid sanitary permit and $20, or the amount determined under department rule, of the fee to the department within 90 days after the permit is issued.

(4) Use of Fee. The portion of this fee retained by the governmental unit responsible for the regulation of private sewage systems shall be used for the administration of private sewage system programs.

(5) Fee adjustment. The department, by rule promulgated under ch. 227, may adjust the minimum permit fee under sub. (2) and the fee portion forwarded under sub. (3).

(6) Groundwater Fee. In addition to the fee under sub. (2), the governmental unit responsible for the regulation of private sewage systems shall collect a groundwater fee of $25 for each sanitary permit. The governmental unit shall forward this fee to the department together with the copy of the sanitary permit and the fee under sub. (3). The moneys collected under this subsection shall be credited to the environmental fund for environmental management.

A-83.21 (6) Renewals. Sanitary permit renewals are completed in compliance with s.145.135 (1) and 145.135 (2) (e), Wis. Stats. A completed sanitary permit renewal application form must be submitted to the local permit issuing agent.

CHAPTER 145.135 WISCONSIN STATUTES
(a) The purpose of the sanitary permit is to allow installation of the private sewage system described in the application for permit.
(b) The approval of the sanitary permit is based on regulations in force on the date of issue.
(c) The sanitary permit is valid for 2 years from original date of issuance and may be renewed for similar periods thereafter. Application for renewal shall be made through the county and shall comply with regulations in effect at the time.
(d) Changed regulations will not impair the validity of a sanitary permit until the time of renewal.
(e) Renewal of the sanitary permit will be based on regulations in force at the time renewal is sought. Changed regulations may impair renewal.
(f) The sanitary permit is transferable. A sanitary permit transfer shall be obtained from the county authority.

* If you wish to renew the permit, or transfer ownership of the permit, please contact the county authority.
A–83.22 (2) PLANS AND SPECIFICATIONS. A POWTS plan review application form must be completed and submitted with a plan submittal. The application form is uniform state-wide and includes a worksheet to calculate the appropriate fees for the project.

Priority Review: Enter same amount as subtotal ....................................................

Prior approval from a section chief is required for a priority review.
If approval is granted, the priority will be reviewed within 5 days of receipt.

Enter TOTAL here and on bottom of FRONT PAGE $

Note: Fees for aerobic or prepackaged treatment systems that may include trash tanks shall be calculated based on the rated capacity of the aerobic unit or prepackaged treatment system as compared to an equivalent septic tank size.

Note: Fees are pursuant to ch. Comm 2 and are subject to change annually; please contact any of the offices listed below for the most recent copy of this form.

Note: Comm 2 provides for a partial fee refund if a plan action has not been taken within the 15 days of receipt of all required information.

7. Appointment, Scheduling Information, and Plan Submittal Checklists. POWTS scheduling is not available. Plans will be assigned to a reviewer after receipt of plans.

If you wish to receive confirmation of the assigned reviewer and estimated completion date please check the box in the upper right corner of the front page. Also note in the same location that you can designate a specific office for review. If you select a specific office your estimated completion date may be considerably greater than what would be possible in another office. Submittals received without a specific office indicated on the form may be assigned to offices other than the receiving office depending on reviewer availability. To obtain a submittal checklist call the material order unit at 608-266-1818 or one of the full service offices listed below.

Register, April, 2000, No. 532.
A–83.22 (3) Plan review process. All proposed POWTS installations require plan review prior to sanitary permit issuance. Projects subject to department review include all projects under Table 83.22–1, and many of the projects under Table 83.22–2. Designated agents may review projects included in Table 83.22–2.

#### A-83.25 (2) Issuance of Building Permits

A building permit is defined in s. Comm 81.01 (43), Wis. Adm. Code, as any written permission from a municipality that allows construction to commence on a structure. In effect, this means that land use and zoning permits, as well as other similar permits that constitute permission to construct are considered building permits.

Prior to building permit issuance, the issuing agent has a statutory responsibility, under s. 66.036, Wis. Stats., to consider whether or not the proposed structure requires connection to a private onsite wastewater treatment system (POWTS), or if the construction will interfere with the operation of an existing POWTS.

**Section 66.036, Stats. Building on unserved property.** (1) No county, city, town or village may issue a building permit for construction of any structure requiring connection to a private domestic sewage treatment and disposal system unless a system satisfying all applicable regulations already exists to serve the proposed structure or all permits necessary to install such a system have been obtained.

(2) Before issuing a building permit for construction on any structure on property not served by a municipal sewage treatment plant, the county, city, town or village shall determine that the proposed construction does not interfere with a functioning private domestic sewage treatment and disposal system. The county, city, town or village may require building permit applicants to submit a detailed plan of the owner's existing private domestic sewage treatment and disposal system.

#### A-83.25 (2) (e) Setbacks

Horizontal setbacks from encumbrance for new POWTS installations are in conformance with Table Comm 83.43-1 or the rules in effect at the time the system was installed, which ever is less. For setback distances associated with previous administrative codes refer to the previous code issue or the following table.

Footnotes:
- a. Includes water tight cesspools, septic tanks, and septic chambers.
- b. Lake category includes lakes, reservoirs, ponds, and reservoirs.
- c. The code required 5 feet of soil over GW or BR. It is assumed that a 3 foot separation was maintained.
- d. Septic tank shell shall not extend into crevices of soil formations.
- e. May be reduced to 0 feet if 100 feet is drilled and used to 100 feet.
- f. Meets the definition of dwelling.
- g. Refers to water supply in contact with septic tank.
- h. Refers to habitable buildings.
- i. Refers to non-habitable buildings.
- j. Refers to above ground swimming pools.
- k. Refers to normal delivery of water to soil.
A–83.43 (6) COMMERCIAL FACILITIES. Table A–83.43–1 may be used to estimate wastewater flows from a commercial building.

* = May be high strength waste

**A–83.43 (6) (a)** Actual meter readings may be used to calculate the combined estimated design wastewater flow from a dwelling. To calculate the estimated design wastewater flow use the following formula and compare the answer to the peak metered flow. Choose the larger of the two estimated design flows.

\[(\text{total meter flow/number of readings}) \times 1.5 = \text{estimated design wastewater flow}\]

The frequency of meter readings should be daily for commercial.

**A–83.43 (6) (b)** A detailed per capita and per function flow may be established for commercial facilities. The per function flow ratings shall be substantiated by manufacturers data of the per function flow and detailed use data from the facility in question or a similar facility under similar conditions of use. Estimated design wastewater flow shall be at least 1.5 times the total estimated daily flow calculated from the per capita and per function flow information.

**A–83.43 (7) ESTIMATING CONTAMINANT LOADS**

Pathogenic contaminant load may be estimated based on data collected by a reputable testing or research facility.

**Typical Data on the Unit Loading Factors and Expected Wastewater Contaminant Loads from Individual Residences**

**A–83.43 (8) (g) Anchoring system components.**

The anchoring of components to counter buoyant forces due to saturated soil conditions can be determined using the following formula:

\[
\text{Weight of the component plus the weight of the anchor} = 1.5 \times \text{[volume of water the component displaces] times [the weight of water (62.4 pounds/cubic foot at 39°F)]}
\]
A-83.44 ORIENTATION (6)

Orientation of above grade dispersal structures is on the contour except that a 1% cross slope is acceptable along the length as shown below.
Chapter Comm 84
PLUMBING PRODUCTS

Comm 84.01 **Scope.** The provisions of this chapter govern the quality and installation of materials, fixtures, appliances, appurtenances, and equipment relating to plumbing.

**History:** Cr. Register, May, 1988, No. 389, eff. 6-1-88.

Comm 84.02 **Penalties.** Penalties for violations of this chapter shall be assessed in accordance with ss. 145.12 and 145.25, Stats.

**History:** Cr. Register, May, 1988, No. 389, eff. 6-1-88.

Comm 84.03 **Definitions.** In this chapter:

1. "Health care plumbing appliance" means a plumbing appliance, the function of which is unique to health care activities.

2. "Laboratory plumbing appliance" means a plumbing appliance, the function of which is unique to scientific experimentation or research activities.

3. "Prefabricated plumbing" means concealed drain piping, vent piping or water supply piping or a combination of these types of piping, contained in a modular building component, which will not be visible for inspection when delivered to the final site of installation.

**History:** Cr. Register, May, 1988, No. 389, eff. 6-1-88.

Comm 84.10 **Department approval.** No fixture, appliance, appurtenance, material, device or product may be sold for use in a plumbing system or may be installed in a plumbing system, unless it is of a type conforming to the standards or specifications of chs. Comm 82 and 83 and this chapter and ch. 145, Stats.

1. **ALTERNATE OR EXPERIMENTAL PRODUCT APPROVAL.** If it is alleged that the approval of a fixture, appliance, appurtenance, material, device or product under this section would result in an adverse health effect or potentially adverse health effect on the waters of the state, the department may require an alternate or experimental product approval under s. Comm 84.50.

2. **PRODUCT REVIEW AND APPROVAL.** (a) Each type of plumbing product which falls into one of the categories specified in Table 84.10 shall be approved by the department in accordance with the subheading before the product may be sold for use in a plumbing system or installed in a plumbing system.

1. Except as provided in subd. 2., specifications and plans or drawings for each type of product shall be submitted to the department for review. The submittal shall be accompanied by sufficient data and information to determine if the product and its performance complies with the provisions of chs. Comm 82, 83 and this chapter and ch. 145, Stats.

2. The submitter of a cross-connection control device listed under Table 84.10, line 2 may submit in lieu of specifications, plans or drawings evidence that the product is currently listed by a nationally recognized evaluation agency acceptable to the department. Evidence substantiating the listing by an evaluation agency shall include a research report from which it can be determined that the product conforms to the appropriate requirements of s. Comm 84.30 (5) (c).

(b) The department may require that a submitter of a product for review have the product tested and its performance certified by an approved testing laboratory.

(c) If, upon review, the department determines that a product conforms to the provisions of chs. Comm 82, 83 and this chapter and ch. 145, Stats., the department shall issue an approval in writing. The department may impose specific conditions in granting an approval. Violations of the conditions under which an approval is granted shall constitute a violation of this chapter.

(d) If, upon review, the department determines that a product does not conform to provisions of chs. Comm 82, 83 and this chapter and ch. 145, Stats., the request for approval shall be denied in writing.

(e) The department shall review and make a determination on an application for a product approval within 40 business days of receipt of all fees, plans, drawings, specifications and other information required to complete the review.

(f) If an approved plumbing product is modified or additional assertions of function or performance are made, the approval shall be considered null and void, unless the change is submitted to the department for review and the approval is reaffirmed.

(g) Approvals for plumbing products issued by the department prior to November 1, 1985, shall expire 30 months after the effective date of this section.

(h) Approvals for plumbing products issued by the department after November 1, 1985, shall expire at the end of the 60th month after the date of approval issuance.

(3) **VOLUNTARY POWTS COMPONENT REVIEW.** (a) The department may issue an approval, upon request and review, for specified methods or technologies that are proposed to be utilized as POWTS holding, treatment or dispersal components which conform to the standards or specifications referenced in chs. Comm 81, 82, 83 and this chapter, but do not require approval under sub. (2) or s. Comm 84.50.

(b) Each request for approval shall be made on a form provided by the department.

Note: See appendix for a reprint of the form and addresses of the department where the form may be obtained.

(c) The submittal shall be accompanied by sufficient data and information to determine if the method or technology complies with the provisions of chs. Comm 81, 82 and 83, and this chapter.
The submittal shall include, but not be limited to, all of the following:

1. Plans and specifications.
2. Theory of operation.
3. Testing protocol.
4. Testing data.
5. Limits of reliable operation.
6. Installation requirements and procedures.
7. Inspection checklist and worksheet.
8. Inspection requirements and procedures.
9. Operation and maintenance requirements.
10. Operation and maintenance schedule.
11. Operation and maintenance checklist and worksheet.

(d) 1. The department shall review a submittal under this subsection with input from a technical advisory committee.

2. The members on the technical advisory committee under subd. 1. shall be appointed by the department for staggered 3-year terms and shall include representatives of at least the following groups or organizations:
   a. The department of natural resources.
   b. Local governmental unit.
   c. POWTS designer.
   d. Academic or scientific community.
   e. Plumber.
   f. Environmental group.
   g. POWTS component manufacturer.

(e) 1. After review by the technical advisory committee under par. (d) but prior to issuing an approval under par. (f), the department shall seek public comments on a submittal under this subsection.

2. a. The department shall place the notice requesting public comment under subd. 1. in the official state newspaper. Note: The official state newspaper at the time this rule goes into effect, July 1, 2000, is the Wisconsin State Journal.

   b. The department shall include a time limit for public comment in each notice.

3. If the department receives a significant amount of public comment under subd. 2., the department may elect to recognize the specific method or technology through the rule-making process under ch. 227, Stats., and to cite the recognition in s. Comm 83.61.

(f) 1. If, upon review, the department determines that the method or technology conforms to the provisions of chs. Comm 81, 82 and 83 and this chapter, the department shall issue an approval in writing.

2. The department may impose specific conditions in granting an approval, including provision to provide training to POWTS installers and POWTS inspectors.

3. Violations of the conditions under which an approval is granted shall constitute a violation of this chapter.

(g) If, upon review, the department determines that the method or technology does not conform to the provisions of chs. Comm 81, 82 and 83 and this chapter, the request for approval shall be denied in writing.

(h) The department shall review and make a determination on an application for a method or technology approval within 3 months of receipt of all fees, plans, drawings, specifications and other information required to complete the review, unless the department elects to review the method or technology as part of the rule-making process under ch. 227, Stats.

(i) If an approved method or technology is modified or additional assertions of function or performance are made, the approval shall be considered null and void, unless the change is submitted to the department for review and the approval is reaffirmed.

(4) REVOCATION. The department may revoke any approval or listing issued on which the approval or listing was based, or as a result of the product's failure, or if future information indicates a potential health hazard or potential threat to the waters of the state.

(5) LIMITATIONS. An approval or listing of a plumbing product by the department may not be construed as an assumption of any responsibility for defects in design, construction or performance of any product nor for any damages that may result.

(6) FEES. Fees for product approval review and product listing shall be submitted in accordance with s. Comm 2.66.

Comm 84.11 Identification. Each length of pipe and each pipe fitting, trap, fixture, material, device and product to be used in plumbing shall be marked as required by the applicable standard specified by reference in this chapter or as specified by rule in this chapter.

History: Cr. Register, May, 1988, No. 389, eff. 6-1-88; am., Register, April, 2000, No. 532, eff. 7-1-00.

Comm 84.12 Penetrations of fire-resistive assemblies. Penetrations of fire-resistive assemblies, such as walls, floor-ceiling systems, by plumbing systems or plumbing materials shall be protected in accordance with requirements of chs. Comm 50 to 64.

History: Cr. Register, May, 1988, No. 389, eff. 6-1-88; correction made under s. 13.93 (2m) (b) 7., Stats.

Comm 84.13 Chemical or biochemical treatments for private sewage systems. Chemical or biochemical treatments for private sewage systems shall function and perform in accordance with the provisions submitted to the department. Chemical or biochemical treatments for private sewage systems may not directly or indirectly adversely affect bacterial action in the systems, soil hydraulic conductivity in the absorption areas, or groundwater quality beneath the systems.

History: Cr. Register, May, 1988, No. 389, eff. 6-1-88; correction made under s. 13.93 (2m) (b) 7., Stats.

Comm 84.14 Health care and laboratory plumbing appliances. Health care plumbing appliances and laboratory plumbing appliances shall function and perform in accordance with the drain, vent, water supply and backflow protection requirements of ch. Comm 82.

History: Cr. Register, May, 1988, No. 389, eff. 6-1-88.

Comm 84.20 Plumbing fixtures, appliances and equipment. (1) DESIGN AND CONSTRUCTION. All plumbing fixtures, appliances and equipment shall be designed and constructed to:

(a) Ensure durability, proper service and sanitation;
(b) Be free from defects;
(c) Be free from concealed fouling surfaces;
(d) Not require undue efforts in cleaning and operating; and
(e) Prevent nonpotable liquids, solids or gasses from being introduced into a potable water supply system through cross-connections.

(2) MATERIALS. Plumbing fixtures shall have smooth surfaces which are impervious to water.

(3) WATER CONSERVING FAUCETS, SPOUTS AND PLUMBING FIXTURES. Water conserving faucets, spouts and plumbing fixtures which meet or exceed the water conservation requirements established in par. (b) shall be installed as specified in par. (a).

(a) 1. All lavatory faucets, shower heads, urinals, urinal flushing devices, water closets and water closet flushing devices shall conform to par. (b).
2. All faucets installed on kitchen sinks of dwelling units and living units shall conform to par. (b) 4.

   (b) 1. General. Flow control or flow restricting devices shall be installed on the water inlet side or shall be an integral part of the faucet, spout or fixture. A flow controlling or restricting aero tor shall be considered to be an integral part of a faucet or spout.

2. Lavatory faucet. a. The maximum discharge rate of lavatory faucets shall be 3 U.S. gallons per minute at an 80 psig flowing supply pressure.

   b. Lavatory faucets which are of the self-closing type shall allow a maximum of one U.S. gallon to flow through the faucet after the handle or actuator is released.

3. Shower heads. The maximum discharge rate of shower heads shall be 3 U.S. gallons per minute at an 80 psig flowing supply pressure.

4. Sink faucets. The maximum discharge rate of sink faucets shall be 3 U.S. gallons per minute at an 80 psig flowing supply pressure.

5. Urinals. Urinals shall function properly with a maximum of 1.5 U.S. gallons per flush per fixture use at static test pressures of 20 psig and 80 psig.

6. Urinal flushing devices. The flushing cycle for urinal flushing devices shall discharge a maximum of 1.5 U.S. gallons per flush per fixture use at static test pressures of 20 psig and 80 psig.

7. Water closets. Water closets shall function properly with a maximum of 4 U.S. gallons per flush over the range of static test pressures specified in Table 84.20.

8. Water closet flushing devices. The flushing cycle for water closet flushing devices shall discharge a maximum of 4 U.S. gallons over the range of static test pressures specified in Table 84.20.

(4) GENERAL REQUIREMENTS. (a) Fixture outlets. 1. The outlet passageway of a fixture shall be free from impairments and of sufficient size to assure proper discharge of the fixture contents under normal conditions.

2. The outlet connection of a fixture which directly connects to the drain system shall be an air and watertight joint.

(b) Installation of fixtures. 1. Access for cleaning. Plumbing fixtures shall be so installed as to afford easy access for cleaning both the fixture and the area around it.

2. Securing wall mounted fixtures. Wall mounted fixtures shall be rigidly supported by a hanger which is attached to structural members so that the load is not transmitted to the fixture drain connection or any other part of the plumbing system. The hanger for a wall mounted water closet shall conform to ANSI A112.6.1M.

3. Water supply protection. The water supply pipes and fittings within every plumbing fixture shall be so installed as to prevent backflow.

4. Design of overflow. A fixture which is provided with an overflow outlet shall be designed and installed so that standing water in the fixture cannot rise in the overflow when the fixture’s stopper is closed, and so that no water remains in the overflow when the fixture is empty.

5. Connection of overflows. The overflow from any fixture shall discharge into the drain system on the inlet or fixture side of the trap.

6. Overflows in flush tanks. Flush tanks shall be provided with overflows discharging to the fixture served and shall be of sufficient size to prevent flooding the tank at the maximum rate at which the tanks are supplied with water.

7. Strainers. All plumbing fixtures other than water closets, clinic sinks, trap standard service sinks with flush rims, urinals, standpipes and waste sinks shall be provided with strainers, cross bars or pop-up stoppers which restrict the clear opening of the waste outlet.

8. Flushometer valves. Flushometer valves shall be equipped with vacuum breakers which conform to ASSE 1001. Flushometer valves may not be used where the water pressure is insufficient to properly operate them. When the valve is operated, it shall complete the cycle of operation automatically, opening fully and closing positively under the water supply pressure. Each flushometer shall be provided with a means for regulating the flow through it.

9. Safing. The floors of all shower stalls, shower rooms, floor setting service sinks or receptors, sumps, basins or other similar fixtures shall be protected with a safining material installed beneath the finish floor of the entire fixture or room and upward along the sides to a minimum of 6 inches above the curb or maximum water level of the fixture. Safing materials shall conform to s. Comm 84.30 (6). The corners of the fixture or room shall be saffed to a height of 6 feet and at least 3 inches in each direction from the corners. The safining material shall be properly drained. Prefabricated fixtures and installations directly over an excavated portion of a building are exempt from safining requirements.

Note: Chapters Comm 50 to 64 contain provisions for toilet rooms and sanitary facilities, for public buildings and places of employment concerning toilet facilities for the handicapped, fixture compartments, number of fixtures for the different types of occupancies and toilet room finishes.

(5) PLUMBING FIXTURES AND PLUMBING APPLIANCES. (a) Automatic clothes washers. Residential type automatic clothes washers shall conform to ASSE 1007.

(b) Bathtubs. 1. a. Enamelled cast iron bathtubs shall conform to ANSI A112.19.1M.

   b. Porcelain enamelled formed steel bathtubs shall conform to ANSI A112.19.4.

   c. Plastic bathtubs shall conform to ANSI Z124.1.

2. Bathtubs shall have waste outlets and overflows at least 1-1/2 inches in diameter. A pop-up stopper or other closing device shall be provided on the waste outlet.

3. All whirlpool piping for bathtubs shall drain by gravity to the trap serving the bathtub.

4. All waterways of the whirlpool pump for a bathtub shall drain by gravity to the trap serving the bathtub.

(c) Bidets. Vitreous china bidets shall conform to the material requirements in ANSI A112.19.2M.

1. A bidet may not be located closer than 15 inches from its center to any side wall, partition, vanity or other obstruction, nor closer than 30 inches center to center from a water closet.

2. Bidets with submerged inlet fittings shall be protected by vacuum breakers which conform to ASSE 1001.

(d) Dishwashing machines. 1. Residential type dishwashing machines shall conform to ASSE 1006.

2. Commercial type dishwashing machines shall conform to ASSE 1004.

(e) Drinking fountains. 1. Drinking fountains and water coolers shall conform to ARI 1010 or ANSI A112.19.2M.

2. Drinking fountains may not be installed in toilet rooms.

3. The water supply for drinking fountains shall be provided with an adjustable valve fitted with a loose key or an automatic self-closing valve permitting regulation of the rate of flow of water. The water supply issuing from the nozzle shall be of sufficient volume and height so that persons using the fountain need not come in direct contact with the nozzle or orifice.
4. A drinking fountain may not have a waste outlet less than 1–1/4 inches in diameter.

(f) Floor drains. 1. Floor drains shall be provided with removable strainers of sufficient strength to carry the anticipated loads.
2. The floor drain shall be so constructed that it can be cleaned, and the drain inlet shall be accessible at all times.
3. Floor drains shall be of a size to efficiently serve the intended purpose. The floor drain outlet shall not be less than 2 inches in diameter.

(g) Food waste grinders. 1. Residential type food waste grinders shall conform to ASSE 1008. Commercial type food waste grinders shall conform to ASSE 1009.
2. Food waste grinders shall be connected to a drain of sufficient size to serve the unit, but not less than 1 1/2 inches in diameter.
3. Food waste grinders shall be connected to a drain and trapped separately from any other fixtures or sink compartments.
4. All food waste grinders shall be provided with an adequate supply of cold water at a sufficient flow rate to insure proper functioning of the unit.

(h) Laundry trays. Each compartment of a laundry tray shall be provided with a waste outlet not less than 1 1/2 inches in diameter.

(i) Lavatories. 1. a. Enameled cast iron lavatories shall conform to ANSI A112.19.1M.
b. Vitreous china lavatories shall conform to ANSI A112.19.2M.
c. Stainless steel lavatories shall conform to ANSI A112.19.3.
d. Porcelain enameled formed steel lavatories shall conform to ANSI A112.19.4.
e. Plastic lavatories shall conform to ANSI Z124.3.
2. Cultured marble vanity tops with an integral lavatory shall conform to ANSI Z124.3.
3. Lavatories shall have waste outlets not less than 1–3/4 inches in diameter.

(j) POWTS design packages and POWTS components. POWTS design packages and POWTS components shall function and perform in accordance with assertions submitted to and approved by the department under s. Comm 84.10.

(k) Showers. 1. Prefabricated plastic showers and shower compartments shall conform to ANSI Z124.2.
2. Water distribution piping from the shower valve to the shower head outlet shall be securely attached to the structure.
3. Except for combination bathtub–shower units, waste outlets serving showers shall be at least 2 inches in diameter and shall have removable strainers of sufficient strength for the anticipated loads.

4. Where a waste outlet serves more than one shower space or shower head, the waste outlet shall be at least 2 inches in diameter and the waste outlet shall be so located and the floor so pitched that waste water from one shower does not flow over the floor area serving another shower.

Notes: Section Comm 52.60(5)(a) specifies slip–resistant requirements for shower rooms and compartments in public buildings and places of employment.
5. All shower compartments, regardless of shape, shall have a minimum finished interior of 900 square inches and shall be capable of encompassing a circle with a diameter of 30 inches. The minimum required area and dimension shall be measured in a horizontal plane 24 inches above the top of the threshold and may not extend beyond the centerline of the threshold. The minimum area and dimensions shall be maintained to a point 70 inches above the shower waste outlet with no protrusions other than the fixture valve or valves, showerheads, soap dishes and safety grab bars or rails.

Notes: See Appendix for further explanatory materials.

(l) Sinks. 1. a. Enameled cast iron sinks shall conform to ANSI A112.19.1M.
b. Vitreous china sinks shall conform to ANSI A112.19.2M.
c. Stainless steel sinks shall conform to ANSI A112.19.3.
d. Porcelain enameled formed steel sinks shall conform to ANSI A112.19.4.
2. Sinks shall be provided with waste outlets not less than 1/2 inches in diameter. Sinks on which a food grinder is installed shall have a waste opening not less than 3–1/4 inches in diameter.

(m) Urinals. 1. Vitreous china urinals shall conform to ANSI A112.19.2M–90 and A112.19.6–90.
2. A urinal may not be located closer than 16 inches from its center to any side wall, partition, vanity or other obstruction. Nor closer than 30 inches center to center, between urinals. When the space between stall type urinals or a stall type urinal and a side wall is less than 12 inches, the space shall be filled flush with the front and top of the urinal with nonabsorbent material.

Notes: See Appendix for further explanatory material.
3. Stall type urinals shall be set into the floor and the floor shall be pitched toward the fixture.

4. Automatic siphon urinal flush tanks may not be installed.
5. Pressurized flushing devices to serve urinals shall conform to ASSE 1037.

(n) Water closets. 1. a. Vitreous china water closets shall conform to either ANSI A112.19.2M–82 or ANSI A112.19.2M–90 and ANSI A112.19.6–90.
b. Plastic water closets shall conform to ANSI Z124.4.
2. Except as permitted in subd. 3., all water closets required to be provided in public buildings and places of employment shall be of an elongated bowl type, and provided with either:
   a. Hinged, open–front seats without covers; or
   b. Hinged, closed–front seats, without covers, which are encased with a continuous plastic sleeve capable of providing a clean surface for every user and for which a specific material approval under s. Comm 50.19 has been issued.
3. Water closets which are required to be provided in day care centers or individual living units or sleeping units of residential occupancies within the scope of either ch. Comm 57 or 61 may be of a round–bowl type with a hinged, closed front seat with or without a cover.
4. A water closet may not be located closer than 15 inches from its center to any wall, partition, vanity, or other obstruction, nor closer than 30 inches center to center, between water closets. There shall be at least 24 inches clearance in front of a water closet to any wall, fixture or door bearing the label.

Notes: See Appendix for further explanatory material.
5. No person may install or maintain pan, plunger, cistern, washout, washout, long hopper, frostproof and other types of water closets having invisible seals or unventilated spaces or walls not thoroughly cleansed at each flushing.

6. Each water closet shall be individually equipped with a flushing device. Pressurized flushing devices shall conform to ASSE 1037. All flushing devices shall be readily accessible for maintenance and repair. Ballcocks and fill valves shall be of the anti–siphon type and shall conform to ASSE 1002. The critical level mark on the ballcock and fill valve shall be located at least one inch above the full opening of the overflow pipe.

(o) Water heaters. 1. Listed equipment. All water heaters shall bear the label of a listing agency approved by the department. Listing agencies approved by the department shall include:
   a. Underwriters Laboratories, Inc.;
   b. American Gas Association;
   c. American Society of Mechanical Engineers; and
   d. ETL Testing Laboratories, Inc.
2. Design. a. All pressurized water heaters and pressurized hot water storage tanks, except those bearing the label of the American Society of Mechanical Engineers, shall be designed and
constructed to withstand a minimum test pressure of 150% of the maximum allowable working pressure of the heater or tank.

b. All pressurized water heaters and pressurized hot water storage tanks shall be rated for a minimum working pressure of 125 psig.

c. A drain valve shall be installed at the lowest point of each water heater and hot water storage tank. Drain valves shall conform to ASSE 1005.

3. Safety devices. a. Relief valves shall be listed by the American Society of Mechanical Engineers when the heat input to a water heater is less than or equal to 200,000 Btu per hour.

b. Relief valves shall be listed by the American Society of Mechanical Engineers when the heat input to a water heater exceeds 200,000 Btu per hour.

c. Pressure relief valves shall be set to open at either the maximum allowable working pressure rating of the water heater or storage tank or 150 psig, whichever is smaller.

d. Temperature and pressure relief valves shall be set to open at a maximum of 210°F and in accordance with subd. 3. c.

Note: See s. Comm 82.40 (5) (6) 1. concerning the sizing of temperature and pressure relief valves.

(p) Water meters. A water meter which is used pursuant to s. Comm 83.18 (10) shall conform to AWWA C700, AWWA C701, AWWA C702, AWWA C704, AWWA C706, AWWA C707, AWWA C708, or AWWA C710.

(q) Water treatment devices. 1. Water softeners shall conform to WQA S-100.

Note: See s. Comm 82.40 for limitations as to the types of water treatment devices which may discharge to a POTWS.

2. a. Except as provided in subd. 2. b., water treatment devices shall function and perform in accordance with the assertions submitted to the department under s. Comm 84.10, relating to rendering inactive or removing contaminants.

b. A water treatment device which injects a water treatment compound into a water supply system shall maintain the compound concentration in the system over the working flow rate range and pressure range of the device.

3. Except as specified in subd. 4., water treatment compounds introduced into the water supply system by a water treatment device shall be listed as an acceptable drinking water additive by a listing agency approved by the department. Listing agencies approved by the department shall include:

a. United States environmental protection agency;

b. United States food and drug administration;

c. National sanitation foundation.

4. A water supply system shall be protected from backflow when unlisted water treatment compounds, which may affect the potability of the water, are introduced into the system. The department shall determine the method of backflow protection. Water supply outlets for human use or consumption may not be installed downstream of the introduction of an unlisted water treatment compound.

5. Water treatment devices designed for contaminated water supplies shall be labeled to identify the following information:

a. The name of the manufacturer of the device;

b. The device's trade name;

c. The device's model number.

(r) Other plumbing fixtures, appliances and equipment. Plumbing fixtures, appliances and equipment not specifically covered in this subsection shall conform to the applicable performance standards of this chapter and chs. Comm 82 and 83.

(f) Faucets, spouts and fixture supply connectors. (a) Except for circular and semi–circular wash fountains, all faucets and showerheads shall conform to ANSI A112.18.1M.

(b) Circular and semi–circular wash fountains shall conform to the working pressure, burst pressure, discharge rate and product marking requirements of ANSI A112.18.1M.

c. All fixture supply connectors shall be designed and constructed to withstand a minimum pressure of 100 psig at 180°F.

(d) Flexible hose and spray assemblies for residential sinks shall conform to ASSE 1025.

(e) Hand–held showers shall conform to ASSE 1014.

History: Cr. Register, May 1968, No. 385, eff. 6–1–68; r. (5) (m) 2 to 5, cr. (5) (m) 3 and 5, r. (5) (m) 1, cr. (5) (m) 2 and 3, ef. 3–1–72; r. (5) (m) 2 to 5, cr. (5) (m) 1 and 3, cr. (5) (m) 2 and 3, ef. 3–1–76; cr. (5) (m) 2 to 5, cr. (5) (m) 1 and 3, cr. (5) (m) 2 and 3, ef. 3–1–78; cr. (5) (m) 2 to 5, cr. (5) (m) 1 and 3, cr. (5) (m) 2 and 3, ef. 3–1–82; cr. Comm 84.25 POWTS holding components or treatment components. (1) General. All POWTS holding components or treatment components shall conform to the requirements of this section.

(2) Water treatment. (a) General. Tank assemblies, including fittings and access openings, shall be manufactured to be water tight as required under this subsection.

(b) Concrete tanks. 1. Where concrete tanks are required to have covers, the tanks shall meet one of the following requirements:

a. Withstand a vacuum of at least 2 inches of mercury for 60 minutes, without loss of pressure.

b. Hold water for one hour, without leakage after the tank has been filled with water to the top of the cover and let stand for 24 hours, then refilled to the top of the cover.

2. Concrete tanks that are not required to have a cover shall be capable of holding water after being filled to their inlet or outlet, whichever is higher, for 24 hours without loss of water.

(c) Steel tanks. 1. Steel tanks that are required to have a cover shall be capable of withstanding one of the following requirements:

a. An internal air pressure of at least 5 psig for 15 minutes, without loss of pressure.

b. An internal water pressure of at least 5 psig for 60 minutes, without loss of pressure.

2. Steel tanks that are not required to have a cover shall be capable of holding water after being filled to their inlet or outlet, whichever is higher, for one hour without loss of water.

(d) Tanks constructed of materials other than concrete or steel. 1. Tanks constructed of materials other than concrete or steel that are required to have a cover shall be capable of withstanding one of the following requirements:

a. A vacuum of at least 2 inches of mercury for 60 minutes, without loss of pressure.

b. An internal air pressure of at least 5 psig for 15 minutes, without loss of pressure.

c. An internal water pressure of at least 5 psig for 60 minutes, without loss of pressure.

2. Tanks constructed of materials other than concrete or steel that are not required to have a cover shall be capable of holding water after being filled to their inlet or outlet, whichever is higher, for one hour without loss of water.

(3) Strength. Tank assemblies, including fittings and access openings, shall be capable of withstanding loads and pressures that the tanks are intended to encounter and remain watertight.

(4) Protection from elements. (a) Concrete tanks. 1. The interior of a concrete tank assembly, including fittings and access openings, shall have a protective coating or be constructed of material, above the lowest liquid level expected in the tank, that will inhibit the deterioration of the concrete due to internal environmental effects.
2. Under subd. 1., concrete with a water cement ratio not exceeding 0.45 shall be considered resistant to deterioration due to internal environmental effects.

(b) Steel tanks. 1. Steel tank assemblies, including fittings and access openings, shall have a protective coating that will inhibit the deterioration of the steel due to internal and external environmental effects.

2. Steel tank assemblies, including fittings and access openings, installed underground shall be provided with cathodic protection in accordance with UL Standard 1746 or STI-P3.

2. Tanks constructed of materials other than concrete or steel. Tank assemblies, including fittings and access openings, constructed of materials other than concrete or steel shall be protected against deterioration due to internal and external environmental effects.

5) Venting. (a) Each tank, except camp unit transfer containers, shall be provided with a means of venting gases formed inside of the tank to the atmosphere.

(b) The tank vent shall terminate in accordance with s. Comm 82.31 (16).

6) Pipe connection. All pipe connection openings to a tank shall be designed to allow connections in accordance with s. Comm 84.40.

7) Access. (a) Each covered tank shall be provided with one or more openings of sufficient size and located in such a manner to provide a means for inspection or required servicing or maintenance of the tank.

(b) Inspection openings for tanks located below ground shall extend at least to the finished grade.

(c) Servicing and maintenance openings for treatment tanks located below ground shall extend at least within 6 inches below finished grade.

(d) Servicing and maintenance openings for holding components shall comply with all of the following:

1. Extend to at least 4 inches above finished grade when the holding component is below ground.

2. Be located to allow inspection and maintenance of pumps or siphons located in the holding component.

(e) Inspection, maintenance and servicing openings shall terminate with a means that prevents entrance of deleterious materials.

7) Cover. Covers located at or above ground for openings larger than 8 inches in diameter shall be provided with locking devices and shall remain locked except for cleaning or maintenance purposes.

8) Warning label. (a) Covers for all tank openings larger than 8 inches in diameter shall be provided with a permanent warning label indicating the dangers of entering the tank, in accordance with this subsection.

(b) The warning label shall be securely attached and made of a noncorrosive metal or plastic bearing the legend "DO NOT ENTER WITHOUT PROPER EQUIPMENT" or "DANGEROUS GASES EXIST IN TANK" or similar language.

(c) The label shall be rectangular in shape with minimum dimensions of 4 by 5 inches.

(d) The wording on the label shall be a minimum of 1/2 inch in height and be either indented or raised.

9) Dosing apparatus. (a) Pumps for POWTS used to disperse air, treated wastewater or final effluent shall be rated by the pump manufacturer for such use.

(b) Siphons for POWTS shall be rated by the siphon manufacturer for wastewater use.

(c) All other dosing apparatus for POWTS shall be constructed of corrosive resistant materials and designed to perform as intended.

10) Alarm system. (a) All pump and alarm controls for POWTS shall be specifically designed by the manufacturer for such use.

(b) The use of pressure diaphragm switches in POWTS tanks shall be prohibited.

11) Tank label. (a) Anaerobic tanks. Each anaerobic treatment tank or holding component shall be labeled near an inlet or outlet opening. The label shall be embossed, impressed, or securely attached to the tank. The label shall include all of the following information:

1. Name or trademark of the manufacturer.

2. Capacity of each compartment.

3. Manufacturer's model number.

(b) Aerobic tanks. 1. Each aerobic treatment tank shall be provided with 2 label plates. Label plates shall be inscribed to be easily read and understood, and be securely attached.

2. One label plate shall be attached to the front of the electrical control box. The second label plate shall be attached to the aeration equipment assembly, tank, or riser at a location normally subject to access during inspection of the unit.

3. Each label plate shall include all of the following information:

a. Name or trademark of the manufacturer.

b. Model number.

c. Rated daily flow capacity of the unit.

12) Other treatment components. A treatment component not specifically covered in this section may not be sold for use in a POWTS or may not be installed in a POWTS, unless it has received department approval and conforms to the applicable performance standards of this chapter and chs. Comm 82 and 83, and ch. 145, Stats.

History: Cr. Register, April, 1980, No. 532, eff. 7-1-80.

Comm 84.30 Plumbing materials. (1) General. When selecting the material and size for a plumbing system, due consideration shall be given to the soil, liquid, and atmospheric environments that will eventually surround the plumbing system.

(a) The bending or offsetting of flexible or annealed pipe or tubing shall be in accordance with the applicable material standard or the instructions of the manufacturer of the pipe or tubing.

(b) Pipe or tubing with gages, cuts or deep scratches may not be installed.

(c) Pipe or tubing which has been kinked may not be installed.

(d) The bending or offsetting of rigid pipe shall be prohibited.

(e) Nailing plates shall be installed to protect copper or plastic pipe or tubing from puncture.

Note: See s. Comm 84.30(6)(f) concerning the bending of polyethylene pipe distribution pipe and tubing.

(2) Sanitary drain and vent systems. Sanitary drain systems and vent systems shall be of such material and workmanship as set forth in this subsection.

(a) Above ground drain and vent pipe. Except as provided in s. Comm 82.33 (2), drain pipe and vent pipe installed above ground shall conform to one of the standards listed in Table 84.30–1.

(b) Ground drain and vent pipe. Except as provided in par. (d), drain pipe and vent pipe installed underground shall conform to one of the standards listed in Table 84.30–2.

(c) Sanitary building sewer pipe. Sanitary building sewer pipe shall conform to one of the standards listed in Table 84.30–3.

(d) Treated wastewater piping. 1. Nonpressurized, nonperforated drain piping conveying treated wastewater from a POWTS treatment or holding component to a POWTS treatment or holding component, distribution cell or dispersal zone shall conform to one of the standards listed in Table 84.30–3.
2. Nonpressurized perforated drain piping conveying treated wastewater in a POWTS soil treatment or dispersal component shall conform to one of the standards listed in Table 84.30–4.

3. Pressurized perforated drain piping conveying treated wastewater in a POWTS treatment or dispersal component shall conform to one of the standards listed in Table 84.30–5 and shall be perforated in accordance with the POWTS design.

(e) Pressurized drain pipe. Except as provided in par. (d) 3, pressurized drain pipe shall conform to one of the standards listed in Table 84.30–5 and shall be rated for the working pressure and temperature to which it will be subjected for a specific installation.

(i) Chemical drain and vent pipe. Drain systems and vent systems for chemical wastes shall be of approved corrosion resistant material. The manufacturer of the pipe shall indicate to the department the material's suitability for the concentrations of chemicals involved.

(g) Catch basins, interceptors and sumps. Catch basins, interceptors and sumps shall be constructed in a watertight manner of pressurized reinforced concrete, reinforced monolithic concrete, cast iron, or coated 12-gauge steel, vibrated clay, fiberglass, plastic or other approved materials.

(b) Manholes. Manholes shall be constructed in a watertight manner of pressurized reinforced concrete, reinforced monolithic concrete, brick or block, fiberglass or other approved materials. Fiberglass manholes may be approved for use in traffic areas if the top section of the manhole is not made of fiberglass.

(i) Service suction lines. A service suction line or pump discharge line serving a holding tank for cleaning purposes shall conform to one of the standards listed in Table 84.30–5. Joints and connections for suction lines shall conform to s. Comm 84.40. The use of mechanical joints shall be in accordance with the recommendations and instructions specified by the manufacturer.

Note: a. Thermoplastic sewer pipe shall be installed in accordance with ASTM D2321.
Note: b. Copper tubing, type M, may not be installed underground.

(3) Storm and Clear Water Drain and Vent Systems. Storm and clear water drain and vent systems shall be of such material and workmanship as set forth in this subsection.

(a) Above ground drain and vent pipe. Drain pipe and vent pipe installed above ground and inside a building shall conform to one of the standards listed in Table 84.30–1, except black steel pipe conforming to ASTM A53 may be used for storm water conductors. Black steel conductors may not be embedded in concrete or masonry.

(b) Underground drain and vent pipe. Drain pipe and vent pipe installed underground shall conform to one of the standards listed in Table 84.30–2.

(c) Storm building sewer pipe. Storm building sewer pipe shall conform to one of the standards listed in Table 84.30–6.
(d) **Subsoil drain pipe.** Subsoil drains shall be open jointed, horizontally split, or perforated pipe conforming to one of the standards listed in Table 84.30-C–7.

(e) **Roof drains.** 1. Roof drains shall be provided with removable strainers of sufficient strength to carry the anticipated loads.
   
   2. Roof drains shall be so constructed that the drains can be cleaned and the drain inlets accessible at all time.

3. Roof drains shall be sized in accordance with s. Comm 82.36 and the drain outlet shall not be less than 2 1/2 inches in diameter.

Note: See s. Comm 82.36 (18) for additional roof drain requirements.

(f) **Area drain inlets.** Area drain inlets shall be constructed in a watertight manner of prestressed concrete, reinforced monolithic concrete, brick or block, cast iron, coated 12 gauge steel, vitrified clay, fiberglass or other approved materials.

### (4) WATER SUPPLY SYSTEMS.

Water supply systems shall be of such material and workmanship as set forth in this subsection. All materials in contact with water, in a water supply system, shall be suitable for use with potable water. All pipes and pipe fittings for water supply systems shall be made of a material that contains not more than 0.002% lead.

(a) **Water quality.** A water supply system shall be resistant to corrosive action and degradation from the water being conveyed.

(b) **Soil and groundwater.** The installation of water supply systems shall be prohibited in soil and groundwater that is contaminated with solvents, fuels, organic compounds or other detrimental materials which will cause permeation, corrosion, degradation, or structural failure of the piping material.

1. Where detrimental conditions are suspected, a chemical analysis of the soil and groundwater conditions shall be required to ascertain the acceptability of the proposed water supply system materials for the specific installation.

2. Where a detrimental condition exists, no underground water supply system may be installed until the detrimental condition can be:
   
   a. Eliminated and the source of the condition can be eliminated;
   
   b. Identified and the pipe and joining method can be proven resistant to the detrimental condition; or
   
   c. Avoided by choosing an alternate route that will not be affected by the detrimental condition.

(c) **Certification of plastic pipe.** Plastic pipe for a water supply system shall conform to NSF 14 and shall be certified by a nationally recognized testing agencies to conforming to NSF 14. Plastic pipe for water supply systems shall bear the certification mark of the testing agency.

(d) **Water services and private water mains.** 1. Water service pipe and private water mains shall conform to one of the standards listed in Table 84.30–8. Pipe and tubing for water services and private water mains shall have a minimum working pressure of 150 psi at 73.4°F.

2. A local governmental unit may by ordinance restrict the types of materials for water services and private water mains which are to be located within or beneath an area subject to an easement for a highway, street or public service right-of-way. Before adopting an ordinance restricting the types of materials for water services the local governmental unit shall submit a copy of the proposed ordinance to the department for review and approval.

3. Existing metallic water service piping or water distribution piping used for electrical grounding shall not be replaced with nonmetallic pipe or tubing until other approved electrical grounding means are provided.

(e) **Water distribution pipe.** 1. Except as provided in subd. 2, water distribution pipe shall have a minimum working pressure of 100 psi at 180°F and shall conform to one of the standards listed in Table 84.30–9.

2. Water distribution pipe installed underground for an exterior turf sprinkler system shall conform to one of the standards listed in Table 84.30–10. Water distribution pipe and fittings for exterior turf sprinkler systems shall have a minimum working pressure of 100 psi at 73.4°F. Water distribution pipe installed above ground for an exterior turf sprinkler system shall conform to subd. 1.

Note: Portions of a water supply system that supply water to a fire sprinkler system are to also conform to the requirements specified in s. ILIR 51.23.

(f) **Bending limitations.** 1. The bending of polybutylene water service pipe or tubing shall be in accordance with the manufacturer's instructions.

2. The bending radius of polybutylene water distribution pipe or tubing shall meet or exceed the bending radius specified in Table 84.30–9m and shall meet or exceed the bending radius specified by the manufacturer of the pipe or tubing.

Note: See Appendix for further explanatory material.

Polybutylene water distribution pipe or tubing shall be supported or anchored at the beginning and end of long bends in accordance with the manufacturer's instructions.

Note a: Plastic pipe and tubing installed underground shall be in accordance with ASTM D2774.
Note b: Copper tubing, type M, may not be installed underground.

(g) Circulating loops. Polybutylene pipe and tubing may not be used for continuously circulating hot water loops.

(h) Used piping. Piping which has been used for any other purpose than conveying potable water may not be used for water supply systems.

(5) PIPE FITTINGS AND VALVES. (a) Fittings. Pipe fittings shall conform to the pipe material standards listed in this chapter or one of the standards listed in Table 84.30–11. Threaded drain pipe fittings shall be of the recessed drainage type.

(b) Water supply valves. 1. Control valves for water services and private water mains shall be designed and constructed to withstand a minimum pressure of 125 psig at 73.4°F.

2. Control valves for water distribution systems shall be designed and constructed to withstand a minimum pressure of 100 psig at 180°F.

3. A control valve which serves 2 or more plumbing fixtures shall have, with the valve in a fully open position, a flow through passageway of not less than one nominal pipe size smaller than the nominal size of the piping connecting to the valve.

4. A control valve which serves 2 or more plumbing fixtures may not be a globe type valve.

(c) Special fittings and valves. 1. Water hammer arrestors shall conform to ANSI A112.26.1 or ASSE 1010.

2. Relief valves and automatic gas shut-off devices for hot water supply systems shall conform to ANSI Z22.12.

4. Pipe applied atmospheric type vacuum breakers shall conform to ASSE 1001.

5. Water pressure reducing valves and strainers for water pressure reducing valves for domestic water supply systems shall conform to ASSE 1003.

6. Hose connection vacuum breakers shall conform to ASSE 1011.

7. Backflow preventers with intermediate atmospheric vent shall conform to ASSE 1012.

8. Reduced pressure principle backflow preventers shall conform to ASSE 1013.

9. Double check backflow prevention assemblies shall conform to ASSE 1015.

10. Trap seal primer valves, water fed shall conform to ASSE 1018.

11. Vacuum breaker wall hydrants, freeze resistant automatic draining type shall conform to ASSE 1019.

12. Pressure vacuum breaker assemblies shall conform to ASSE 1020.

13. Laboratory faucet backflow preventers shall conform to ASSE 1035.

14. Reduced pressure detector backflow preventers shall conform to ASSE 1047.

15. Double check detector assembly backflow preventers shall conform to ASSE 1048.

16. Back siphonage backflow vacuum breakers shall conform to ASSE 1056.

17. Hose connection backflow preventers shall conform to ASSE 1052.

(d) Pipe saddles. Pipe saddles shall be installed in accordance with the instructions of the saddle manufacturer and the following limitations:

1. Pipe saddles may be installed on private interceptor main sewers, building sewers, underground drain and vent pipe and tubing, and where otherwise approved by the department.

2. A saddle for drain piping shall have a radius in accordance with s. Comm 82.30 (8) (a).

3. The material of the saddle shall be compatible with the materials of the pipes which are to be connected to the saddle.

4. The hole in the pipe which is to receive the saddle shall be drilled or cored to match the saddle outlet.

5. Straps or clamps which wrap around the pipe and saddle shall be provided by the manufacturer of the saddle.

6. Saddles shall be installed with straps or clamps which wrap around the pipe and saddle; and

7. Proper hangers or bedding shall be provided to maintain alignment between the opening in the pipe and the saddle.

### (b) Leaching chambers.

Leaching chambers for distribution cell components of POWTS shall meet all of the following requirements:

1. Constructed of corrosion resistant materials.
2. Designed to prevent soil surrounding the chamber from entering the chamber.
3. Capable of withstanding pressures that the leaching chamber is intended to encounter.

**Note:** Stone aggregate. Stone aggregate which is used as a filtering medium or to create a distribution cell in a treatment or dispersal component of a POWTS shall conform to all of the following requirements:

1. Conform to ASTM Standard C53 for coarse aggregate prior to washing.
2. Be washed to remove fine material.
3. Be ½ to 2½ inches in size.
4. Have a hardness value of at least 3 on Moh's Scale of Hardness.

**Note:** Stone that can scratch a copper penny without leaving any residual stone material on the penny has a hardness value of at least 3 on Moh's Scale of Hardness.

### (j) Sand.

Sand which is used as a filtering medium in a treatment or distribution cell shall conform to ASTM Standard C33 for fine aggregate.

### Comm 84.40

**Joints and connections.**

1. **General.**
   - **Tightness.** Joints and connections in the plumbing system shall be watertight and gastight as required by test or system design, whichever is greater, or as required by the adopted product standard or department approval.

**Note:** The testing requirements for tightness are in s. Comm 82.21.

2. **Preparation of pipe ends.** Pipe ends shall be prepared in accordance with the applicable pipe standard or the pipe or fitting manufacturer’s instructions.

(c) **Prohibited joints and connections.** Unless otherwise permitted in this chapter or ch. Comm 82 or 83, the following types of joints and connections shall be prohibited:

1. Cement or concrete joints;
2. Mastic or hot poured bituminous joints;
3. Elastomeric rolling o-rings between different diameter pipes;
4. Solvent cement joints between different types of plastic pipe; and
5. Roll grooving of galvanized steel pipe.

(2) ABS PLASTIC PIPE. Joints between acrylonitrile butadiene styrene plastic pipe or fittings shall be installed in accordance with paras. (a) to (c).

(a) Mechanical joints. Mechanical joints shall be installed in accordance with the manufacturer's instructions.
   1. 'Drain and vent systems'. Mechanical push-on joints for drain and vent systems shall conform to ASTM D3212.
   2. 'Water supply systems'. Mechanical push-on joints and mechanical compression-type joints for water supply systems which use a flexible elastomeric seal shall conform to ASTM D3139.

(b) Solvent cemented joints. Solvent cemented joints shall be made in accordance with ASTM D2235 and its appendix, ASTM D2661 or ASTM F628.
   1. Joint surfaces shall be clean and free of moisture.
   2. Solvent cement conforming to ASTM D2235 shall be applied to all joint surfaces and the joint shall be made while the cement is wet.
   3. Solvent cement shall be handled in accordance with ASTM F402.

4. Solvent cement used or pipes and fittings of a water supply system shall conform to NSF 14 and shall be certified by a nationally recognized testing agency as to conforming to NSF 14. The container for the solvent cement shall bear the certification mark of the testing agency.

(c) Threaded joints. Threaded joints shall only be used on pipes of schedule 80 or heavier. Threaded joints shall conform to ANSI B1.20.1. The pipe shall be threaded with dies specifically designed for plastic pipe. Thread lubricant or tape approved for such use shall be applied to the male threads only.

3. BLACK STEEL PIPE. Joints between black steel pipe or fittings shall be in accordance with paras. (a) to (d).

(a) Threaded joints. Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

(b) Mechanical joints. Mechanical joints shall be installed in accordance with the manufacturer's instructions.

(c) Caulked joints. Caulked joints shall only be used for drain or vent piping. Caulked joints for hub and spigot piping and fittings shall be firmly packed with oakum or hemp. Molten lead shall be poured in one operation not less than one inch deep and not to extend more than 1/8 inch below the rim of the pipe, and caulked tight. Paint, varnish or other coatings may not be used on the joining material until after the joint has been tested and approved.
   1. Caulked joints for drain piping shall be used only in a vertical position.
   2. Caulked joints for vent piping may be used for piping in a vertical or horizontal position.

(d) Welded joints. Joints between black steel pipe or fittings may be welded.

4. BRASS PIPE. Joints between brass pipe or fittings shall be in accordance with the provisions of paras. (a) to (d).

(a) Brazed joints. All joint surfaces to be brazed shall be cleaned bright by other than chemical means. Brazing filler metal conforming to AWS A5.8 or other approved material shall be used. The joining of water supply piping shall be made with lead-free materials. "Lead-free" shall mean a chemical composition equal to or less than 0.2% of lead.

(b) Mechanical joints. Mechanical joints shall be installed in accordance with the manufacturer's instructions. Mechanical push-on joints and mechanical compression type joints for water supply systems which use flexible elastomeric seals shall conform to ASTM D3139.

(c) Soldered joints. All joint surfaces to be soldered shall be cleaned bright by other than chemical means. A nontoxic flux shall be applied to all joint surfaces. Solder conforming to ASTM B32 or other approved material shall be used. The joining of water supply piping shall be made with lead-free materials. "Lead-free" shall mean a chemical composition equal to or less than 0.2% of lead.

(d) Threaded joints. Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

5. CAST IRON PIPE. Joints between cast iron pipe or fittings shall be installed in accordance with paras. (a) and (b).

(a) Caulked joints. 1. Drain and vent systems. Caulked joints for hub and spigot pipe of drain and vent systems shall be firmly packed with oakum or hemp. Molten lead shall be poured in one operation not less than one inch deep and not to extend more than 1/8 inch below the rim of the pipe, and caulked tight. Paint, varnish or other coatings may not be used on the joining material until after the joint has been tested and approved.
   2. Water supply systems. Joints for bell and spigot pipe of water supply systems shall be firmly packed with treated pipe rope. Molten lead shall be poured in one operation to a depth of 2½ inches.

(b) Mechanical joints. 1. Drain and vent systems. Mechanical push-on joints for drain and vent systems shall have gaskets which conform to ASTM C564.
   b. Mechanical sleeve joints for drain and vent systems shall have a rubber sealing sleeve conforming to ASTM C564, CSPI 310 or FM 1680. Where a stainless steel band assembly is used, the band assembly shall conform to CSPI 310 or FM 1580. Mechanical joints shall be installed in accordance with the manufacturer's instructions.

2. Water supply systems. Mechanical push-on joints and mechanical compression type joints for water supply systems shall conform to AWWA C111/A21.11. Lead tipped gaskets may not be used.

(c) Threaded joints. Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

6. CPVC PLASTIC PIPE. Joints between chlorinated polyvinyl chloride plastic pipe or fittings shall be installed in accordance with the provisions of paras. (a) to (c).

(a) Mechanical joints. Mechanical joints shall be installed in accordance with the manufacturer's instructions. Mechanical push-on type joints which use flexible elastomeric seals shall conform to ASTM D3139.

(b) Solvent cemented joints. Solvent cemented joints shall be made in accordance with ASTM D2846 and its Appendix or ASTM F493 and its Appendix.

1. Joint surfaces shall be clean and free of moisture. A primer conforming to ASTM F556 shall be applied to all joint surfaces. The primer shall be purple in color.

2. Solvent cement conforming to ASTM F493 shall be applied to all joint surfaces and the joint shall be made while the cement is wet.

3. Solvent cement shall be handled in accordance with ASTM F402.

4. Solvent cement shall be orange in color.

5. Primer and solvent cement used on pipes and fittings of a water supply system shall conform to NSF 14 and shall be certified by a nationally recognized testing agency as to conforming
to NSF 14. The containers for the primer and the solvent cement shall bear the certification mark of the testing agency.

(c) **Threaded joints.** Threaded joints shall only be used on pipes of schedule 80 or heavier. Threaded joints shall conform to ANSI B1.20.1. The pipe shall be threaded with dies specifically designed for plastic pipe. Thread lubricant or tape approved for such use shall be applied to the male threads only.

(7) **Concrete pipe.** Joints between concrete pipe or fittings shall be made by use of an elastomeric seal conforming to ASTM C443.

(8) **Copper pipe and tubing.** Joints between copper pipe, tubing or fittings shall be installed in accordance with pars. (a) to (c).

(a) **Brazed joints.** All joint surfaces to be brazed shall be cleaned bright by other than chemical means. Brazing filler metal conforming to AWS A5.8 or other approved material shall be used. The joining of water supply piping shall be made with lead–free materials. "Lead–free" shall mean a chemical composition equal to or less than 0.2% of lead.

(b) **Flared joints.** Flared joints may be used on annealed tubing for gas, steam and water supply systems and shall be made by the use of a tool designed for that operation.

(c) **Mechanical joints.** Mechanical joints shall be installed in accordance with the manufacturer’s instructions. Mechanical push–on joints and mechanical compression type joints for water supply systems which use flexible elastomeric seals shall conform to ASTM D3139.

(d) **Soldered joints.** All joint surfaces to be soldered shall be cleaned bright by other than chemical means. A nontoxic flux shall be applied to all joint surfaces. Solder conforming to ASTM B32 or other approved material shall be used. The joining of water supply piping shall be made with lead–free materials. "Lead–free" shall mean a chemical composition equal to or less than 0.2% of lead.

(e) **Threaded joints.** Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

(9) **Ductile iron pipe.** (a) **Mechanical joints.** Mechanical push–on joints and mechanical compression type joints for water supply systems shall conform to AWWA C111/A21.11. Lead tipped gaskets may not be used.

(b) **Threaded joints.** Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

(10) **Galvanized steel pipe.** Joints between galvanized steel pipe or fittings or between galvanized steel pipe and cast iron fittings shall be installed in accordance with pars. (a) to (c).

(a) **Threaded joints.** Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

(b) **Mechanical joints.** Mechanical joints shall be installed in accordance with the manufacturer’s instructions. Mechanical push–on joints and mechanical compression type joints for water supply systems which use flexible elastomeric seals shall conform to ASTM D3139.

(c) **Caulked joints.** Caulked joints shall only be used for drain or vent piping. Caulked joints for hub and spigot piping and fittings shall be firmly packed with oakum or hemp. Molten lead shall be poured in one operation not less than one inch deep and not to extend more than \(\frac{1}{8}\) inch below the rim of the pipe, and caulked tight. Paint, varnish or other coatings may not be used on the joining material until after the joint has been tested and approved.

1. Caulked joints for drain piping shall be used only for piping in a vertical position.
2. Caulked joints for vent piping may be used for piping in a vertical or horizontal position.

(11) **Lead pipe.** Joints between lead pipe or fittings shall be installed in accordance with pars. (a) and (b).

(a) **Burned joints.** Burned joints shall be uniformly fused together into one continuous piece. The thickness of the joint shall be at least as thick as the lead being joined. The filler metal shall be of the same material as the pipe.

(b) **Wiped joints.** A wiped joint shall be full wiped, having an exposed surface on each side of the joint not less than 3/4 inch and shall be at least 3/8 inch thick at the thickest point.

(12) **PB Plastic pipe and tubing.** Joints between polybutylene plastic pipe and tubing or fittings shall be installed in accordance with pars. (a) to (c).

(a) **Flared joints.** Flared joints shall be made by use of a tool designed for that operation. Flared joints shall be made in accordance with ASTM D3140.

(b) **Heat fusion joints.** Heat fusion joints shall be made in accordance with ASTM D2657 and ASTM D3309. Heat fusion joints shall be of a socket fusion type.

1. Joint surfaces to be fused shall be clean and free of moisture.
2. All joint surfaces shall be heated to the temperature recommended by the pipe or fitting manufacturer and joined.
3. The joint shall be undisturbed until cool.

(c) **Mechanical joints.** Mechanical joints shall be installed in accordance with the manufacturer’s instructions. Mechanical push–on joints and mechanical compression type joints which use flexible elastomeric seals shall conform to ASTM D3139.

(13) **PE Plastic pipe and tubing.** Joints between polyethylene plastic pipe, tubing or fittings shall be in accordance with pars. (a) to (c).

(a) **Flared joints.** Flared joints shall be made by use of a tool designed for that operation. Flared joints shall be made in accordance with ASTM D3140.

(b) **Heat fusion joints.** Heat fusion joints shall be made in accordance with ASTM D2657. Heat fusion joints shall be of a socket fusion type.

1. Joint surfaces to be fused shall be clean and free of moisture.
2. All joint surfaces shall be heated to the temperature recommended by the pipe or fitting manufacturer and joined.
3. The joint shall be undisturbed until cool.

(c) **Mechanical joints.** Mechanical joints may be installed in accordance with the manufacturer’s instructions. Mechanical push–on joints and mechanical compression type joints which use flexible elastomeric seals shall conform to ASTM D3139.

(13m) **PEX Plastic tubing.** Joints between crosslinked polyethylene plastic pipe, tubing or fittings shall be made in accordance with the manufacturer’s instructions.

(14) **PVC Plastic pipe.** Joints between polyvinyl chloride plastic pipe or fittings shall be in accordance with pars. (a) to (c).

(a) **Mechanical joints.** Mechanical joints shall be installed in accordance with the manufacturer’s instructions.

1. Drain and vent systems. Mechanical push–on joints for drain and vent systems shall conform to ASTM D3212.
2. Water supply systems. Mechanical push–on joints and mechanical compression type joints for water supply systems which use flexible elastomeric seals shall conform to ASTM D3139.

(b) **Solvent cemented joints.** Solvent cemented joints shall be made in accordance with ASTM D2655.

1. Joint surfaces shall be clean and free of moisture. A primer conforming to ASTM F656 shall be applied to all joint surfaces.
2. Solvent cement conforming to ASTM D2564 shall be applied to all joint surfaces and the joint shall be made while the cement is wet.
3. Solvent cement shall be handled in accordance with ASTM F402.

4. Primer and solvent cement used on pipes and fittings of a water supply system shall conform to NSF 14 and shall be certified by a nationally recognized testing agency as to conforming to NSF 14. The containers for the primer and the solvent cement shall bear the certification mark of the testing agency.

(c) Threaded joints. Threaded joints shall only be used on pipes of schedule 80 or heavier. Threaded joints shall conform to ANSI B1.20.1. The pipe shall be threaded with dies specifically designed for plastic pipe. Thread lubricant or tape approved for such use shall be applied to the male threads only.

(15) STAINLESS STEEL. Joints between stainless steel pipe or fittings shall be installed in accordance with the provisions of pars. (a) to (c).

(a) Mechanical joints. Mechanical joints shall be installed in accordance with the manufacturer's instructions. Mechanical push-on type joints which use flexible elastomeric seals shall conform to ASTM D3139.

(b) Threaded joints. Threaded joints shall conform to ANSI B1.20.1. Pipe joint compound or tape shall be used on the male threads only.

(c) Welded joints. Joints between stainless steel pipe or fittings may be welded.

(16) VITRIFIED CLAY PIPE. Joints between vitrified clay pipe or fittings shall be made by use of elastomeric seals conforming to ASTM C425.

(17) JOINTS BETWEEN PIPES AND FITTINGS OF DIFFERENT MATERIALS. Connections between pipes of different materials shall be made with mechanical compression type joints, installed in accordance with manufacturer's instructions or as specified in pars. (a) to (e).

(a) Copper to cast iron. Connections between copper pipe or tube and cast iron pipe shall be by means of either caulked joints in accordance with sub. (5) (a) or threaded fittings in accordance with sub. (5) (c).

(b) Copper to galvanized steel. Connections between copper pipe or tube and galvanized steel pipe shall be by use of an adapter fitting. The copper pipe shall be soldered to the adapter in accordance with sub. (8) (d). The galvanized steel shall be threaded to the adapter in accordance with sub. (10) (a).

(c) Cast iron to steel or brass pipe. Connections between cast iron pipe and galvanized or black steel or brass pipe shall be by means of:

1. Caulked joints in accordance with sub. (5) (a); or
2. Threaded joints in accordance with sub. (5) (c).

(d) Plastic to other materials. 1. Connections between plastic pipe and cast iron pipe shall be by means of:

a. Caulked joints in accordance with sub. (5) (a); or
b. Threaded joints in accordance with sub. (5) (c).

2. Connections between different types of plastic pipe or between plastic pipe and other piping materials other than cast iron shall be by means of threaded joints in accordance with sub. (14) (c).

(e) Lead to other piping materials. Connections between lead pipe and other piping materials shall be by use of an adapter fitting conforming to s. Comm 84.30 (5) (a). The lead pipe shall be caulked or burned to the adapter fitting in accordance with sub. (11).

(18) CONNECTION OF FIXTURES. Flanged fixtures which have integral traps shall be mechanically fastened to the drain piping by means of a compatible fitting. The joint between the fixture and the flange shall be sealed with a watertight gasket or setting compound.

History: Cr. Register, May 1988, No. 389, eff. 6-1-88; am. (5) (b) 1. b., Register, September 1992, No. 441, eff. 10-1-92; am. (11) (a) and cr. (13m), Register, February 1994, No. 458, eff. 3-1-94.

Comm 84.50 Alternate approvals and experimental approvals. (1) GENERAL. The provisions of chs. Comm 82 to 84 are not intended to prevent the use of a plumbing material or product not specifically addressed therein if the plumbing material or product has been approved by the department.

(2) ALTERNATE APPROVAL. (a) Plumbing materials or products determined by the department to comply with the intent of chs. Comm 82 to 84 and ch. 145, Stats., and not approved under s. Comm 84.10, shall be issued an alternate approval. Alternate approvals shall be issued by the department in writing.

(b) The department may require the submission of any information deemed necessary for review. Sufficient evidence shall be submitted to the department to substantiate:

1. Assertions of function and performance; and
2. Compliance with the intent of chs. Comm 82 to 84 and ch. 145, Stats.

(c) The department shall review and make a determination on an application for alternate approval within 3 months of receipt of all information and fees required to complete the review.

(d) The department may impose specific conditions in issuing an alternate approval, including an expiration date for the alternate approval. Violations of the conditions under which an alternate approval is issued shall constitute a violation of this chapter.

(e) If, upon review, the department determines that a plumbing material or product does not comply with the intent of chs. Comm 82 to 84 and ch. 145, Stats., the request for alternate approval shall be denied in writing.

(3) EXPERIMENTAL APPROVAL. (a) The department may allow the installation of a plumbing material or product for the purpose of proving compliance with the intent of chs. Comm 82 to 84 and ch. 145, Stats.

(b) An experimental approval shall be required for each plumbing material or product to be installed for the purpose of proving compliance with the intent of chs. Comm 82 to 84 and ch. 145, Stats. A separate experimental approval shall be obtained for each project where such a product is to be used. Experimental approvals shall be issued by the department in writing. Experimental approvals shall be denied by the department in writing.

(c) The department may require the submission of any information deemed necessary for review.

(d) The department may limit the number of applications it will accept for experimental approval of products.

(e) The department shall review and make a determination on an application for experimental approval within 6 months of receipt of all information and fees required to complete the review.

(f) The department may impose specific conditions in issuing an experimental approval. Violations of the conditions under which an experimental approval is issued shall constitute a violation of this chapter.

(g) If the department issues an experimental approval:

1. Plans detailing the installation of the plumbing material or product shall be submitted to the department in accordance with s. Comm 82.20 (4) or 83.22.
2. A copy of the experimental approval shall be attached to the submitted plans and approved plans.
3. A letter of consent from the owner of the installation shall be attached to the submitted plans and approved plans. The letter shall acknowledge that the owner has received and read a copy of the experimental approval and s. Comm 84.50.

4. The completed installation shall be inspected for compliance with the approved plans by the department. A report on the completed installation shall be written by the department.

5. A written report, from the party who was issued the experimental approval, shall be submitted to the department detailing the function and performance of the installed plumbing material.
or product. The report shall be completed at time intervals specified by the department, but not less than once a year.

6. On-site inspections shall be performed by the department at time intervals specified by the department, but not less than once a year. A report on the inspection shall be written by the department. The department may assess a fee for the inspection.

7. Five years after the date of the completed installation the department shall within 6 months order the removal of the plumbing material or product, issue an approval, or renew the experimental approval for another 5-year period to obtain additional information to determine the result of the experiment.

(h) It chs. Comm 82 to 84 or ch. 145, Stats., are revised to include or permit an experimental plumbing material or product to conform with the intent of chs. Comm 82 to 84 and ch. 145, Stats., the department shall waive the requirements of par. (f) as to that material or product.

(4) MODIFICATIONS. If a plumbing material or product with an alternate or experimental approval or the installation of an experimentally approved plumbing material or product is modified or additional assertions of function or performance are made, the alternate or experimental approval shall be considered null and void, unless the product is resubmitted to the department for review and the approval is reaffirmed.

(5) REVOCATION. The department may revoke an alternate or experimental approval issued under this section for any false statements or misrepresentations of facts or data on which the alternate or experimental approval was based or as a result of product failure.

(6) LIMITATIONS. An alternate or experimental approval of a plumbing material or product issued by the department may not be construed as an assumption of any responsibility for defects in design, construction, or performance of any plumbing material or product nor for any damages that may result.

(7) FEES. Fees for the review of a plumbing material or product under this section and any required on-site inspections shall be submitted in accordance with ch. Comm 2.

Chapter Comm 84

APPENDIX

The material contained in this appendix is for clarification purposes only. The notes, illustrations, etc., are numbered to correspond to the number of the rule as it appears in the text of the code.

A-84-10 (3) (b) Request forms for voluntary POWTS products approval may be obtained at the following locations:

Department of Commerce Offices

Madison Office
201 W. Washington Ave
PO Box 7162
Madison, WI 53707-7162
(608) 266-3151
Personal information you provide may be used for secondary purposes [Privacy Law, s. 15.04(1)(m)].

**Instructions:** Only one review request may be submitted on this application. Type or clearly print in ink all the requested data. The submitting party must be the manufacturer or the manufacturer's representative. Submit this application with the fee to the address shown in the upper right corner. Lists of information required for product review are available from the division. Make checks payable to: Safety and Buildings Division.

- If a product review is based solely on evidence, which substantiates listing by a nationally recognized evaluation agency, the review fee is equal to the fee listed for revision or renewal. Products must conform to standard adopted in Chapter Comm 84, Wis. Adm. Code.

1977-78 Wis. Register, 800, No. 532
Request for revision in accordance with Comm 2.66 (1) (c) or (2) (b) is not applicable if product is submitted with fees for revision or renewal. A minor revision is considered a modification that does not affect the function, retention capacity, basic shape or size of the tank, or the basis of the approval being classified as an alternate. Expiration date of the original approval(s) will not be extended if the minor revision is approved.

Not applicable if product is submitted with fees for revision or renewal. Expiration date of the original approval(s) will not be extended if the fee change for manufacture name and/or address is submitted.
A-84.20 (5) Spacing of Plumbing Fixtures.
A-84.20 (5) Minimum size of shower compartments.

A-84.30 (1) Measuring radius of a bend in PB pipe or tubing.
Chapter Comm 85

SOIL AND SITE EVALUATIONS

Comm 85.01 Purpose. The purpose of this chapter is to establish the minimum requirements for evaluating and reporting soil and site characteristics that may affect treatment or disposal of wastewater, treated wastewater, final effluent or nonwaste-carried human wastes.

History: Cr. Register, April, 2000, No. 533, eff. 7-1-00.

Comm 85.02 Scope. Pursuant to s. 145.02, Stats., this chapter applies to all soil and site evaluations conducted relative to the treatment or disposal of wastewater, treated wastewater, final effluent or nonwaste-carried human wastes into soil.

History: Cr. Register, April, 2000, No. 533, eff. 7-1-00.

Comm 85.10 Qualifications. (1) Soil Evaluation. A soil evaluation for treatment or disposal of wastewater, treated wastewater, final effluent or nonwaste-carried human wastes regulated by chs. Comm 83 and 91 shall be performed by an individual who is a certified soil tester.

Note: Section Comm 5.33 delineates the qualifications and certification procedures for certified soil testers.

(2) Site Evaluation. A site evaluation, relative to the installation of a POWTS treatment, holding or disposal component location, or to determine land slope or setback distances to topographic or other site features shall be performed by a Wisconsin registered architect, professional engineer, designer of plumbing systems, designer of private sewage systems or land surveyor; a certified soil tester or POWTS inspector; or a licensed master plumber or master plumber—restricted service.

(3) Soil Saturation Determinations. Soil saturation determinations may only be conducted and reported by an individual who is a certified soil tester.

History: Cr. Register, April, 2000, No. 533, eff. 7-1-00.

Comm 85.20 Soil evaluations. (1) General. (a) Soil boring methods and procedures shall comply with this section.

(b) Maximum soil application rates shall be determined relative to the soil texture, structure and consistence for each soil horizon or layer.

Note: Section Comm 83.64 establishes maximum soil application rates and soil treatment capability for the design of POWTS treatment or disposal components consisting in part of in situ soil.

(2) Number, Type and Depth of Evaluations. (a) General. The number, type and location of soil profile evaluations shall be sufficient to delineate the area under investigation and to assure consistence of the data within that area.

(b) Number and area. 1. a. Except as provided in subpar. d. and subd. 2., a minimum of 3 soil profile evaluation excavations shall be used to delineate a site within which POWTS treatment or disposal components consisting in part of in situ soil are to be located.

b. For estimated daily flows of 1,000 gallons per day or less, at least one soil profile evaluation excavation per treatment or disposal site shall be conducted as a soil pit, and described in accordance with s. Comm 85.30 (1) (c).

c. For estimated daily flows greater than 1,000 gallons per day, at least three soil profile evaluations per treatment or disposal site shall be conducted as soil pits, and described in accordance with s. Comm 85.30 (1) (c).

d. The department or governmental unit may require additional soil profile evaluation excavations to be conducted where soil variability considerations may not be adequately addressed. The department or governmental unit may specify that soil profile descriptions in accordance with s. Comm 85.30 (1) (c) be conducted for any additional soil profile evaluation excavations.

2. At least one soil pit or soil boring shall be used to establish soil suitability for a pit privy.

Note: Sections Comm 83.44 (3) and 91.13 (1) (b) 1. contain further information regarding privy siting and soil requirements.

(c) Type. 1. Soil profile evaluations used to determine soil application rates shall be conducted using soil pits.

2. Soil profile evaluations used to determine or identify soil horizon depths, soil color, soil texture, redoximorphic feature colors or depth to groundwater or bedrock shall be conducted using either soil pits or soil borings.

(d) Depth. Soil profile evaluations shall extend an adequate depth below the land surface to identify soil properties critical to soil treatment or disposal of wastewater, treated wastewater, final effluent or nonwaste-carried human waste.

(3) Excavation Methods. (a) Soil profile excavations. A soil profile excavation shall be of such size and construction to allow accurate determination of soil characteristics.

(b) Soil borings. 1. Soil borings shall be created by means of a soil bucket auger, soil probe, split—spoon sampler or Shelby tube having at least a 2 inch diameter.

2. A soil boring may not be created by means of a power auger.

(c) Soil pits. A soil pit shall be of adequate size, depth and construction to enable a person to safely enter and exit the pit and to complete a topologically soil profile description.

Note: Occupational safety and health administration regulations (29 CFR 1926, Subpart P) apply to certain types of excavations, and the persons entering such excavations need to be familiar with these regulations.

(4) Soil Evaluation Conditions. (a) Soil color evaluations shall be performed on days when light conditions permit accurate color determinations.

(b) Frozen soil material shall be thawed prior to conducting evaluations for soil color, texture, structure and consistence.

History: Cr. Register, April, 2000, No. 533, eff. 7-1-00.

Comm 85.30 Soil profile description and interpretations. (1) General. (a) A soil profile description shall be prepared for each soil profile excavation constructed.

(b) Soil profile descriptions shall be written in accordance with the descriptive procedures, terminology and interpretations found
in Chapter 3 of the Soil Survey Manual, USDA, October, 1993, except where modified by, or in conflict with, this chapter.

(c) A soil profile description to substantiate soil application rates shall include at least all of the following morphological information for each soil horizon or layer:
1. Thickness in inches or decimal feet.
2. Munsell soil color notation.
3. Soil mottle or redoximorphic feature color, abundance, size and contrast.
4. United States Department of Agriculture, USDA, soil textural class with rock fragment modifiers.
5. Soil structure grade, size and shape.
7. Root abundance and size.
8. Soil boundary.
9. Occurrence of saturated soil, groundwater, bedrock or disturbed soil.

(d) A soil profile description to substantiate soil characteristics other than for application rates shall include the information specified in par. (c) 1. to 4. and 9.

(2) SOIL INTERPRETATIONS. (a) Redoximorphic features or mottles shall be interpreted as zones of seasonal or periodic soil saturation or groundwater, except as provided under sub. (3).
(b) Unless determined otherwise under s. Comm 85.60, the highest elevation of seasonal soil saturation shall be the ground surface where redoximorphic features are present within 4 inches of the bottom of the A horizon.

(3) SOIL COLOR PATTERN EXEMPTIONS. (a) Without filing a report under s. Comm 85.60 (2), a certified soil tester may discount the following conditions, not limited by enumeration, as indicators of seasonally saturated soil:
1. Fossilized soil color patterns formed by historic periodic soil saturation.
2. A soil profile that has an abrupt textural change, consisting of silt loam or finer textures overlying at least 4 feet of unsaturated loamy sand or coarser textured soil and 24 inches or less of periodically saturated soil immediately above the coarser material.
3. Redoximorphic features oriented along old or decayed root channels.
4. Residual sandstone cores.
5. Unevenly weathered glacially deposited material, glacially deposited material naturally gray in color, or concretionary material in various stages of decomposition.
6. Deposits of lime.
7. Light colored silt or fine sand coatings on soil ped surfaces.
(b) Without filing a report under s. Comm 85.60 (2) for a specific site, the department may accept the results of soil saturation determinations or of the hydrograph procedure under s. Comm 85.60 previously conducted by the soil testing laboratory.

(4) SOIL COLOR PATTERN REPORTS. The certified soil tester shall report and describe any soil color pattern exemptions encountered.

(5) DETERMINATION REQUESTS. A certified soil tester may request a determination by the governmental unit or department staff on the significance of unusual soil color patterns as indicators of soil saturation that may not indicate saturated soil conditions that will interfere with wastewater treatment. The governmental unit or department may decline to make such determinations, and defer to the use of soil saturation determinations pursuant to s. Comm 85.60 or some other method to make a determination.

Comm 85.40 Evaluation reports. (1) GENERAL. A soil evaluation report shall be prepared and submitted to the governmental unit having jurisdiction upon the completion of the evaluation and associated report form.

(2) SOIL REPORT CERTIFICATION AND FORMAT. (a) Soil evaluation reports. Soil evaluation reports shall be prepared in a format specified by the department and this chapter.

(b) Certification. 1. Except as provided in subd. 2., each page of a soil evaluation report shall bear:
   a. The original signature of the certified soil tester who collected the data;
   b. The certified soil tester’s identification number; and
   c. The date the report is signed.

2. When more than one sheet of a soil evaluation report is bound together into one volume, only the title sheet shall:
   a. Be required to be signed, dated and bear the identification number of the certified soil tester who collected the data; and
   b. Clearly identify all other sheets comprising the bound volume.

(3) REPORT CONTENTS. (a) Site report. A site evaluation report shall include at least all of the following:
1. The site’s legal description to within 40 acres.
2. The date the data was collected.
3. A legible and permanent site plan that:
   a. Is presented on paper no smaller than 8 ½ inches by 11 inches in size.
   b. Is drawn to scale or fully dimensioned.
   c. Shows the extent of the site evaluated for soil disposal or treatment.

4. Location information for all points under investigation including structures, property lines and other encumbrances to the treatment or disposal component placement on the site.
5. Pertinent elevation data, such as:
   a. A reference to, and description of, a permanent vertical and horizontal reference point or benchmark from which all distances and elevations are delineated on the site plan;
   b. The natural, undisturbed surface grade elevation for all soil profile excavations;
   c. The percent and direction of land slope for the site under evaluation;
   d. Ground surface contour lines at an interval appropriate for the conditions present;
   e. The floodplain elevation, if established, and current surface elevation of any adjacent navigable waters or reservoir; and
   f. The existing grade adjacent to the groundwater elevation observation pipe, the top of the observation pipe, and the bottom of the observation pipe.

(b) Soil report. A soil evaluation report shall include at least all of the following:
1. A site evaluation report pursuant to par. (a).
2. The date soil evaluations were conducted.
3. The site’s legal description to within 40 acres.
4. Soil profile descriptions pursuant to s. Comm 85.30 for all soil profile evaluation excavations.

Comm 85.50 Governmental unit review. (1) GENERAL. (a) A governmental unit shall review all soil evaluation reports and site evaluation reports within 6 months of receipt.

(b) Upon completing the review of a soil evaluation report a governmental unit shall accept the report, reject the report, request additional information or clarification, or require verification under sub. (2).
(c) When a report is deemed acceptable, a governmental unit shall so indicate on the report and file the report for future reference.

(d) If the report is not acceptable, a governmental unit shall notify the submittor in writing and shall state the deficiencies or actions, or both, necessary to bring the report into compliance with this chapter or ch. Comm 83.

(2) Verification. (a) Soil. 1. The governmental unit or the department may require the property owner or the certified soil tester to provide soil pits in accordance with s. Comm 85.20 (3) for verification of soil profile evaluation data.

2. The certified soil tester who is responsible for the soil report shall be present at the site during the verification of soil profile evaluation data if so requested by the governmental unit or the department.

3. Soil verifications may not be conducted under adverse weather or light conditions that may lead to inaccurate results.

(b) Site. 1. The governmental unit or the department may require the property owner or certified individual who prepared the site report to provide assistance and equipment to verify site conditions.

2. The certified individual who is responsible for the site report shall be present at the site during the verification of site conditions if so requested by the governmental unit or department.

(c) Report. The governmental unit or the department shall complete a written report for each soil or site verification completed, and the results or findings of the report shall be filed with the soil and site evaluation report for future reference.

History: Cr. Register, April, 2000, No. 352, eff. 7-1-00.

Comm 85.60 Soil saturation determinations.

(1) General. (a) Optional documentation. 1. A property owner, or their agent, may submit documentation to the department to prove that redoximorphic features, or other soil color patterns, at a particular site are not indicative of periodically saturated soil conditions or high groundwater elevation.

2. Documentation shall be in the form of an interpretative determination, soil saturation determination, or hydrograph procedure pursuant to this section.

(b) Artificially controlled navigable waters. If the groundwater elevation at a site is influenced by the artificial control of navigable waters by a recognized management entity, all of the following conditions shall be addressed:

1. If loamy sand or coarser soil textures prevail at a site, the groundwater elevation at the site shall be compared to the current and highest controlled navigable water elevation.

2. The highest normal groundwater elevation at such sites shall be the higher of either the observed elevation or an adjusted elevation based on the controlled water.

(2) Interpretive determinations. (a) A written report by a certified soil tester evaluating and interpreting redoximorphic soil features, or other soil color patterns, may be submitted to the department in lieu of high groundwater determination data. The written report shall conclusively demonstrate that the existing soil morphological features or color patterns are not indicative of current conditions of periodic soil saturation.

(b) The department shall make a determination on the validity of the data, results and conclusions set forth in the report.

(c) The written report shall include, but not limited to, all of the following information:

1. A soil evaluation report pursuant to s. Comm 85.40.

2. An interpretive review of the site including, but not limited to, all of the following:

   a. Local hydrology.

   b. An historical interpretation of the local geomorphology.

   c. Soil disturbance and hydraulic modification.

d. The landscape position and local topography in the area under investigation.

3. Soil series and mapping units, if available, for the immediate area, as listed in the USDA soil survey.

4. Data, if any, from previous soil saturation determinations in similar soil conditions and landscape position.

5. Any written reports, comments or recommendations by the governmental unit or department staff.

(3) Soil saturation determination. (a) Actual elevations of soil saturation may be determined at specific sites in accordance with the soil saturation determination procedures in pars. (b) to (c).

(b) Intent to determine soil saturation. 1. The property owner, or his or her agent, shall notify the governmental unit and the department of the intent to conduct a soil saturation determination at least 15 business days prior to installing any groundwater elevation observation pipe.

2. The notification to conduct a soil saturation determination shall include:

a. Soil profile descriptions pursuant to s. Comm 85.30 in the area under investigation and the proposed number, depth, and location of the observation pipes; and

b. Written permission signed by the property owner for governmental unit and department personnel to enter upon the property under investigation during reasonable hours of the day to verify observation pipe installation or soil saturation determination results.

(c) Precipitation. 1. Precipitation data reported for soil saturation determination purposes shall include monthly totals for September through May, and daily totals for February through May.

2. Precipitation data totals under subd. 1. shall be from either the closest local station to the site where the observation pipe is installed, or the average from the 3 closest local stations to the site. If averaging is used, the totals under subd. 1. shall be submitted for all 3 stations.

(d) Regional water tables. 1. Where sites are subject to a broad, relatively uniform, regional water table, the fluctuation observed over a several year cycle shall be considered.

2. At such sites, and where free water levels are more than 5 feet below grade, determinations shall be made using the hydrograph procedures contained in sub. (4).

3. Areas affected by a regional water table shall be delineated by the department in consultation with the affected counties and the Wisconsin Geological and Natural History Survey.

(e) Fine textured soil. 1. The department may prohibit soil saturation determinations in fine textured soil with high matric potentials where determination results may be inconclusive.

2. In such cases, the department may approve alternative methods to address the direct determination of saturated or near saturated soil conditions not enumerated in this section.

(f) Groundwater elevation observation pipe installation and construction. 1. Number of observation pipes. a. At least 3 groundwater elevation observation pipes shall be installed to delineate the area under investigation.

b. The governmental unit or department may require more than 3 observation pipes to adequately evaluate potential soil saturation conditions.

2. Observation pipe depth. a. At the request of the department or governmental unit, at least one observation pipe shall be constructed to a depth of 15 feet below the ground surface to determine if high groundwater elevation conditions are due to a perched water table and the possible extent of the saturated zone.

b. Other observation pipes shall terminate at specific depths below grade that will serve to evaluate where shallow perched zones of soil saturation occur within the soil profile.

c. The governmental unit or department may designate specific observation pipe depths and locations based on soil and site.
conditions, or experience in a particular geographic area or topographic position.

d. An observation pipe may not be less than 24 inches deep.

3. Observation pipe construction. The direct observation of soil saturation conditions shall be accomplished by means of observation pipes conforming to this subdivision and Figure 85.60–1.

a. The observation pipe shall be of a material meeting the standards in s. Comm 84.30 Table 84.30–1, except that lead pipe may not be used.

b. The inside diameter of an observation pipe may not be less than 2 inches or more than 4 inches nominal size.

c. The borehole diameter shall be 2 to 4 inches larger than the outside diameter of the observation pipe.

d. The top of the observation pipe shall terminate at least 18 inches above grade and be provided with a vented cap.

e. The bottom of the observation pipe shall terminate with a slotted, or screened pipe. The slots or screen shall extend 6 to 18 inches above the bottom of the pipe and be at least 4 inches below the filter pack seal. The slots or screen shall not be hand cut and shall be designed to retain soil particles with a diameter of greater than 0.02 inch.

f. Except for the vented end cap, joints between lengths of pipe and fittings shall conform to s. Comm 84.40.

g. Finished grade around the observation pipe shall be sloped away from the observation pipe using soil material.

h. At a minimum, the upper 12 inches of annular space surrounding the observation pipe shall be sealed by puddled clay, bentonite, or an equal-parts mixture of soil, bentonite and cement. A surface seal may not be necessary if the entire soil profile is sand.

i. The annular space seal below 12 inches and to the top of the filter pack seal may be of unspecified soil material.

j. A filter pack seal shall be installed above the filter pack to prevent soil migration downward into the filter pack.

k. The observation pipe shall be set on at least 2 inches of pea gravel that extends 4 to 6 inches above the top of the screen or highest slot. The gravel filter pack is not necessary if the natural soil is coarse sand or coarser.
(g) Observations. 1. Observation period. The observation period for soil saturation determinations shall begin on or before the appropriate date specified in Figure 85.60-2, and end June 1st.

2. Alternate observation period. The department may approve an alternate observation period if the data presented conclusively demonstrates equivalency to conditions encountered during a normal spring observation period.

3. Minimum frequency. Observations shall be made on the first day of the observation period and at least every 7 days thereafter until the observation period is complete.

(h) Conclusions. 1. The highest level of soil saturation shall be considered to occur at the highest elevation of free water present in an observation pipe during a 7-day observation period.

2. The results of soil saturation determinations under this section shall be considered inconclusive if the precipitation totals under par. (b) do not equal or exceed:
   a. 8.5 inches from September 1st through the last day of February; and
   b. 7.6 inches from March 1st through May 31st.
(i) Reporting data. 1. Within 60 days of the completion of the observations, 3 copies of the following data shall be submitted to the department for review:
   a. A soil and site evaluation report pursuant to s. Comm 85.40.
   b. Observation pipe installation, depth, location and elevation information.
   c. Precipitation data and name of any local station used.
   d. Observation dates.
   e. Current and any prior observation results.
   f. Any governmental unit observations or reports pertaining to the soil saturation determination observations, observation pipe construction or soil/site conditions.

   2. Within 60 days of the completion of the observations, one copy of the data specified in subd. 1. shall be filed with the governmental unit having jurisdiction.

   (j) Report forms. Soil saturation determination results shall be reported on forms specified by the department.

   Note: Soil saturation determination report forms in an acceptable format are available from the Safety and Buildings Division, P.O. Box 7162, Madison, WI 53707-7162.

(k) Failure to report. Failure to file soil saturation determination results with the governmental unit and department within 60 days may disqualify the site from future soil saturation or interpretive determinations.

   (4) Hydrograph procedure. (a) 1. Where regional water table fluctuations are considered in deep sandy soil, the predicted high groundwater elevation shall be established using hydrograph documentation.

   2. The highest groundwater elevation shall be determined by direct observation during the soil profile evaluation or by one of the hydrograph methods outlined in pars. (b) to (d), whichever is highest.

   (b) 1. If there is less than 5 feet to free water below original grade, the procedures detailed in sub. (2) or (3) shall be used to determine the highest predicted groundwater elevation at the site.

   2. If there is 5 feet or more to free water below original grade, the hydrograph procedure may be used to determine the highest predicted groundwater elevation at the site.
(c) Where the water table at the site is 5 to 10 feet below grade, the procedures of subds. 1. to 5. shall be followed:

1. A completed soil and site evaluation report pursuant to s. Comm 85.40 that confirms the elevation of free water, if observed, shall be prepared.

2. a. A slotted or screened groundwater elevation observation pipe shall be installed at the proposed system location to a depth of at least 12 inches below the free water elevation.

   b. The observation pipe shall be installed and tested pursuant to sub. (3) (f) 3.

3. a. The water level in the observation pipe shall be recorded after completion of the observation pipe installation and 7 days later.

   b. The highest of the 2 water levels shall be used to complete the hydrograph procedure.

4. The permanent USGS groundwater elevation well or wells as assigned by the governmental unit or department shall be read within 24 hours of establishing the actual free water elevation at the site.

   Note: Soil evaluation report forms in an acceptable format are available from the Safety and Buildings Division, P.O. Box 7162, Madison, WI 53707-7162.

5. The hydrograph procedure shall be completed and the results shall be reported to the department in a format specified by the department.

(d) Where the water table at the site is 10 feet or greater below grade, the procedures of subds. 1. to 3. shall be followed.

1. A completed soil and site evaluation report pursuant to s. Comm 85.40 that confirms the elevation of free water, if observed, shall be prepared.

2. The permanent USGS groundwater elevation well or wells assigned to the project by the governmental unit or department shall be read within 24 hours of the actual free water determination at the site.

3. The standard hydrograph procedure shall be completed and the results shall be reported to the department in a format specified by the department.

   Note: Hydrograph soil saturation report forms in an acceptable format are available from the Safety and Buildings Division, P.O. Box 7162, Madison, WI 53707-7162.

5. Soil saturation observation pipe removal. The following requirements shall apply to all groundwater elevation observation pipes installed pursuant to this section:

   (a) Removal timeline. Unless specifically approved by the governmental unit or department, all groundwater elevation observation pipes shall be removed within 60 days after the completion of soil saturation determination.

   (b) Contamination conduit. Any groundwater elevation observation pipe found by the department or governmental unit to be acting as a conduit for groundwater contamination shall be ordered removed immediately.

6. Verification. (a) Verification. 1. The governmental unit or department may request verification of soil saturation determinations pursuant to s. Comm 85.50 (2), and proper observation pipe installation pursuant to this section.

   2. The governmental unit or the department may require any groundwater elevation observation pipe deemed by the governmental unit or the department to be in poor contact with the surrounding soil to be reinstalled pursuant to this section.

   (b) On-site visits. 1. The governmental unit or department may visit sites during soil saturation determination periods or at other reasonable times to determine the accuracy of data.

   2. A written record of on-site visits in subd. 1. shall be maintained by the agency conducting the visits.

History: Cr. Register, April, 2000, No. 532, eff. 7-1-00.
Chapter Comm 86

BOAT AND ON-SHORE SEWAGE FACILITIES

Comm 86.01 Applicability.
Comm 86.02 Definitions.
Comm 86.03 Petition for variance.
Comm 86.04 Contract applicability.
Comm 86.05 Approval required.
Comm 86.06 Holding tank, toilet and appurtenances.

Comm 86.07 Overboard discharge inactivation.
Comm 86.08 On-shore disposal facilities.
Comm 86.09 Alternate facilities.
Comm 86.10 Operation and maintenance.
Comm 86.11 Prohibited facilities.

Comm 86.03 Petition for variance. (1) PROCEDURE. The department shall consider and may grant a variance to an administrative rule upon receipt of a fee and a completed petition for variance form from the owner, provided an equivalent degree of safety is established in the petition for variance which meets the intent of the rule being petitioned. The department may impose specific conditions in a petition for variance to promote the protection of the health, safety and welfare of the employees or the public. Violation of those conditions under which the petition is granted constitutes a violation of these rules.

(2) PETITION PROCESSING TIME. Except for priority petitions, the department shall review and make a determination on a petition for variance within 30 business days of receipt of all calculations, documents and fees required to complete the review. The department shall process priority petitions within 10 business days.

Comm 86.04 Contract applicability. Applicable provisions of this regulation shall be construed to be a part of any order or agreement, written or verbal, for the installation of a holding tank, recirculating system, provisions of a portable toilet or store disposal facility or appurtenances thereto.

Comm 86.05 Approval required. (1) GENERAL. Any prefabricated tank, portable toilet or toilet proposed for installation in boats used upon the inland or outlying waters of the state shall receive the approval of the department. The manufacturer of any prefabricated tank, portable toilet or toilet shall submit, in duplicate, plans and specifications showing construction details for such facility. The owner of a custom built tank or toilet shall similarly submit such details in duplicate for approval prior to installation. The department may require the submission of other information or the unit itself, in the case of a portable toilet, to complete its review.

(2) APPROVED UNIT LISTING. The department shall keep a current list of approved prefabricated tanks, portable toilets and toilets for installation on boats and shall provide a copy of such current list to the bureau of law enforcement, department of natural resources.

Comm 86.06 Holding tank, toilet and appurtenances. (1) MATERIAL. Each holding tank and toilet shall be constructed of a plastic which is resistant to acid, alkali and water, stainless steel with comparable resistance or other approved material. Metal combinations shall be galvanically compatible.

(2) HOLDING TANK STRENGTH. A holding tank, with all openings sealed, shall show no signs of deformation, cracking or leakage when subjected to a combined suction and external pressure
head of 5 pounds per square inch. It shall be designed and installed so as not to become permanently distorted with a static top load of 200 pounds.

(3) Temperature Resistance. All materials used shall be capable of withstanding a temperature range of from -22°F (winter storage) to the maximum operating temperature obtainable when operating in an ambient temperature of 140°F.

(4) Mounting. The tank and toilet shall be rigidly and permanently secured in place in such manner that the tank, toilet and piping will not fall.

(5) Capacity. The capacity shall be sufficient to receive the waste from the maximum number of persons that may be on board during an 8-hour period. The passenger rating shall be that indicated on the boat's capacity plate or that of a boat of similar size should the plate be illegible or missing.

(a) Holding tank. The capacity shall be determined on the basis of contribution of 4\(\frac{1}{2}\) gallons per person per 8-hour day for a toilet of the hand pump type. If standard flush toilets are installed, the minimum capacity shall be at 13\(\frac{1}{2}\) gallons per person per 8-hour day.

(b) Recirculating toilet. The capacity of the tank of a recirculating type shall be determined on the basis of a contribution of one-quarter gallon per person per 8-hour day.

(6) Controls. Each holding tank shall contain a sewage level device which actuates a warning light or other visible gauge when the tank becomes three-quarters full. The light or other device shall be located so that it can be readily observed. The sewage level device shall be in operable condition at any time the boat is used. Such sewage level indicator shall be installed so as to be removable and be of such design and of such size as to make a watertight seal with a tank opening that is sufficiently large to accommodate the sewage level device.

(7) Maintenance. (a) A separate manhole shall be provided in the top of the tank for maintenance purposes. A plate or cap capable of making a watertight seal shall be provided on the opening which shall be of sufficient size to readily permit cleaning and maintenance.

(b) Deodorant. Any deodorant used in a holding tank, approved portable toilet or recirculating toilet shall be easily obtainable and constitute a minimum hazard if handled, stored and used according to the manufacturer's recommendations and form no dangerous concentration of gases nor react dangerously with other chemicals used for the same purpose.

(8) Openings for Piping. Openings shall be provided in each holding tank for inlet, outlet and vent piping. The openings and pipe fittings shall be so designed as to provide watertight joints between the tank and the piping. Plastic opening fittings shall be of the rigid serrated type. Inlet openings should preferably be such that they could accommodate fittings that would be connected to piping of a minimum nominal inside diameter (I.D.) of 1\(\frac{1}{2}\) inches. Outlet openings shall be such as to accommodate at least 1\(\frac{1}{2}\) inch I.D. piping. Vent pipe openings shall be capable of 1\(\frac{1}{2}\) inch I.D. pipe, and should preferably be located at the top of a conical frustum or cylindrical vertical extension of the tank which is at least 2 inches in diameter at the base and 2 inches or more in height.

(9) Pipe and Fittings. (a) Size. The piping from a toilet to the holding tank shall be at least as large as the trap of the toilet fixture. The piping from the holding tank or toilet to the pumpout connection shall have a nominal inside diameter of at least one and one-half inches.

(b) Material. All waste and venting piping shall be made of galvanized steel, wrought iron or galvanized pipe; lead; brass; type M copper; or flexible or rigid plastic pipe. Assembly shall be made with threaded fittings in the case of ferrous or brass pipe; lead or solder type fittings in the case of lead and copper pipe; and with threaded fittings, invertible clamp type fittings or weldable fittings in the case of plastic pipe. Clamps, usable only with plastic pipe, shall be made of stainless steel. All piping materials and fittings shall be capable of withstanding a pressure of at least 75 pounds per square inch and a combined maximum suction and external pressure head equivalent to 50 feet of water.

(c) Location. No piping, other than that for venting, associated with the boat sewage system shall pass through the hull. The vent pipe shall terminate with an inverted U-bend, the opening of which shall be above the maximum water level in the toilet or holding tank. At least one vent terminal shall be constantly open to the atmosphere. The terminal of the outlet pipe shall be of the female connection type and be located above the holding tank in a manner that makes gravity discharge of the contents impractical. It shall have an air tight capping device marked "WASTE" and the cap and flange shall be embossed with the word "WASTE".

(10) Electrical System. The electrical system associated with the boat holding tank or toilet system shall conform to accepted practice and create no hazards.

(11) Portable toilet. Each portable toilet shall meet the material and temperature resistance requirements of subs. (1) and (3). Exposed surfaces shall be of reasonably smooth and cleanable material. Capacity of the flush tank and holding tank shall be adequate for the intended use. Portable toilets shall be designed to prevent spillage of contents of the holding tank when the toilet is tipped or portable toilets shall be secured on board.

History: Cr. Register, September, 1980, No. 297, eff. 10-1-80; renum. from H 80, eff. Register, May, 1983, No. 329, eff. 6-1-83.

Comm 86.07 Overboard discharge inactivation. No boat equipped with a means of discharging sewage directly from a toilet or holding tank into the water upon which the boat is moored or is moved shall carry inland or outlying waters of the state until such means of discharge is inactivated. An owner or operator of a boat equipped with such means of discharge shall contact a representative of the department of natural resources or a local law enforcement official with respect to inactivation before entering state waters. Overboard discharge inactivation shall include as a minimum either disconnection of the toilet piping, removal of the pumping device, securely plugging the discharge outlet, sealing of the toilet bowl with wax or other method approved by the official contacted. The inspecting official shall provide the boat owner or operator with a signed written statement as to the method of inactivation accepted. The owner or operator shall give information as to the inland or outlying waters he or she plans to navigate and as to the time of stay on such waters.

Note: Discharge of waste from boats in any form would be contrary to s. 29.29 (3), Stats.

History: Cr. Register, September, 1980, No. 297, eff. 10-1-80; renum. from H 80, eff. Register, May, 1983, No. 329, eff. 6-1-83; correction made under s. 13.93 (2m) (b) 5., Stats., Register, February, 1994, No. 458.

Comm 86.08 On-shore disposal facilities. (1) Pump. A self-priming pump, suitable for pumping sewage, shall be provided for the on-shore removal of sewage from boat holding tanks and toilets; the installation of which shall be in accord with the appropriate state and local regulations. Head characteristics and capacity shall be based on installation needs for the site. The pump may be either fixed in position or portable mounted.

(2) Suction hose. The suction hose shall be of non-collapsible quality, preferably made with reinforcement. A quick-connect dripproof connector shall be fitted to the end of the hose that is attached to the boat piping outlet.

(3) Discharge hose. Quality flexible hose, compatible with the pump characteristics, may be used. All permanent piping shall conform to the state plumbing regulations. [chs. Comm 82 and 84]

(4) Sewage disposal requirements. (a) Public facilities. When connection to a public sanitary sewer is economically feasible, the disposal piping shall be designed to discharge thereto. [ch. Comm 84]
(b) **Private facilities.** When a public sewer is not available, a private sewage disposal system installed in compliance with applicable state plumbing regulations shall be provided unless adequate private treatment and disposal facilities are already available. [chs. Comm 82 and 83]

(5) **WATER SUPPLY REQUIREMENTS.** The on-shore disposal facility shall be served by a water supply piping system to permit flushing of the facilities serviced. If a potable water supply is the source for flushing, the distribution piping shall be protected from backspionage and backpressure.

(6) **PLAN APPROVAL.** Every owner, personally or through an authorized representative, shall obtain written approval from the department prior to award of any new or modified construction of shore disposal facilities set forth in this section. Three sets of plans and specifications of such new or modified shore disposal facilities to be constructed for the purpose of pumping out boat holding tanks and toilets, receiving sewage from portable toilets, and disposing of the sewage shall be submitted to the department for review as to acceptability. Plans and specifications shall cover in detail the materials to be used, the pump characteristics, the water supply system, and when applicable, the size and construction of the septic or holding tank, results of soil percolation and boring tests and layout of the soil absorption system. Location of all wells within 50 feet of the absorption system, the surface water high water level and the general topography of the area shall be shown on the plans.

(7) **DISPOSAL OF PORTABLE TOILET WASTES.** Sewage from portable toilets shall be discharged into an approved fixture or other approved device designed to receive sewage.

**History:** Cr. Register, September, 1980, No. 297, eff. 10–1–80; remem. from H 80.09, Register, May 1983, No. 329, eff. 6–1–83.

**Comm 86.10 Operation and maintenance.** All facilities controlled by this chapter shall be maintained in good operating condition at all times. All necessary tools for repair and maintenance shall be kept on board or on dock, as the case may be, and shall be properly stored when not in use. Extra fuses for electrical equipment and extra indicator lights shall be on hand. Pump-out suction hoses should be adequately drained through the pump before disconnection and then properly stored or capped. Pumping equipment shall be shut off before the hose is disengaged from the boat outlet pipe. Any equipment on board shall not be used or operated to allow discharge of sewage to surface waters.

**History:** Cr. Register, September, 1980, No. 297, eff. 10–1–80; remem. from H 80.10, Register, May 1983, No. 329, eff. 6–1–83.

**Comm 86.11 Prohibited facilities.** No person shall use or permit to be used as a holding facility for sewage a pail, plastic bag or any other type of portable, semiportable or disposal receptacle aboard boats not specifically permitted by the provisions of this chapter.

**History:** Cr. Register, September, 1980, No. 297, eff. 10–1–80; remem. from H 80.11, Register, May 1983, No. 329, eff. 6–1–83.

Register, April, 2000, No. 532
Chapter Comm 87
PRIVATE SEWAGE SYSTEM REPLACEMENT OR REHABILITATION GRANT PROGRAM

Comm 87.01 Purpose.
Comm 87.02 Applicability.
Comm 87.03 Definitions.
Comm 87.10 Categories of private sewage systems.
Comm 87.20 Eligibility of owners.
Comm 87.21 Eligibility of owner.
Comm 87.25 Maximum allowable grant amount.
Comm 87.31 Maximum allowable grant amount for experimental private sewage systems.
Comm 87.32 Ineligible rehabilitation or replacement work.

Comm 87.40 Application by owners.
Comm 87.50 Application by participating governmental units.
Comm 87.60 Location of funds and grant awards.
Comm 87.70 Payments to participating governmental units.
Comm 87.71 Payments for monitoring of experimental systems.
Comm 87.72 Program enforcement.
Comm 87.80 Program audit.
Comm 87.90 Application for variance.
Comm 87.91 Process for appeal.

Note: Chapter NR 124 as it existed on February 29, 1992 was repealed and a new Chapter ILNR 87 was created effective March 1, 1992. Chapter ILNR 87 was renumbered Chapter Comm 87 under s. 13.93 (2)(b) 1., Stats., and corrections made under s. 13.93 (2)(b) 6. and 7., Stats., Register, February, 1997, No. 494. Chapter Comm 87 was reenacted on December 31, 1998 and a new chapter Comm 87 was created effective February 1, 1999.

Comm 87.01 Purpose. The purpose of this chapter is to establish rules under s. 145.245, Stats., for the implementation and administration of a financial assistance program to replace or rehabilitate failing private sewage systems.

History: Cr., Register, December, 1998, No. 516, eff. 2-1-99.

Comm 87.02 Applicability. (1) This chapter applies to applications received by the department on or after February 1, 1999.

(2) Applications received by the department prior to February 1, 1999 are governed by the rules as they existed on or before January 31, 1999.

History: Cr., Register, December, 1998, No. 516, eff. 2-1-99.

Comm 87.03 Definitions. The following definitions apply to this chapter.

(1) "Department" means the department of commerce.

(2) "Determination of failure" has the meaning given in s. 145.245 (1) (a), Stats.

Note: Section 145.245 (1) (a), Stats., reads: "Determination of failure" means any of the following:

1. A determination that a private sewage system is failing, according to the criteria under s. 145.245 (4), Stats., based on an inspection of the private sewage system by an employee of the state or a governmental unit who is certified to inspect private sewage systems by the department.

2. A written enforcement order issued under s. 145.02 (3) (f), 145.20 (2) (f) or 281.19 (2), Stats.

3. A written enforcement order issued under s. 254.59 (1), Stats., by a governmental unit.

(3) "Failing private sewage system" has the meaning given in s. 145.245 (4), Stats.

Note: Section 145.245 (4), Stats., reads: "The department shall establish criteria for determining if a private sewage system is a failing private sewage system. A failing private sewage system is one which causes or results in any of the following conditions:

(a) The discharge of sewage into surface water or groundwater.

(b) The introduction of sewage into zones of saturation which adversely affects the operation of a private sewage system.

(c) The discharge of sewage to a drain tile or into zones of bedrock.

(d) The discharge of sewage to the surface of the ground.

(e) The failure to accept sewage discharges and back up of sewage into the structure served by the private sewage system.

(4) "Governmental unit" has the meaning as given in s. 145.01 (5), Stats.

Note: Section 145.01 (5), Stats., reads: "Governmental unit" has the meaning as given in s. 145.01 (5), Stats.

(5) "Owner", for the purposes of this chapter, means the person that owns the structure that is served by a failing private sewage system.

(6) "Participating governmental unit" means a governmental unit which applies to the department for financial assistance under this chapter, and which meets the conditions as specified in s. 145.245 (9), Stats.

(7) "Person" means any one of the following:

(a) Any individual including the estate of an individual.

(b) Two or more individuals having a joint or common interest in a principal residence, as defined in s. 145.245 (1) (c), Stats., which uses a private sewage system.

(c) A nonprofit corporation as defined in s. 181.0103 (17), Stats.

(8) "Principal residence" means a residence which is occupied at least 51% of the year by the owner. Principal residence includes a residence owned by a trust or an estate of an individual, if the residence is occupied at least 51% of the year by a person who has an ownership interest as a beneficiary of the trust or estate.

(9) "Project period" means either of the following:

(a) For applications submitted to the department for installations of replacement of private sewage systems, project period means the period of time beginning on February 1 and ending on December 31 of the following year.

(b) For applications submitted to the department for annual costs of monitoring replacement experimental sewage systems, project period means the period beginning on February 1 and ending on December 31 of the 5th year after the date of installation.

(10) "Small commercial establishment" has the meaning given in s. 145.245 (1) (e), Stats. Small commercial establishment includes a farm, including a residence on a farm, if the residence is occupied by a person who is an operator of the farm and if the maximum daily wastewater flow rate of the farm and residence is less than 5,000 gallons per day as determined by the design criteria of the state plumbing code.

Note: Section 145.245 (1) (e), Stats., defines small commercial establishment as a commercial establishment or a business place with a maximum daily wastewater flow rate of less than 3,000 gallons per day.

History: Cr., Register, December, 1998, No. 516, eff. 2-1-99; correction in (7) made under 13.93 (2)(b) 7., Register, April, 2000, No. 532.

Comm 87.10 Categories of private sewage systems. The department and the participating governmental unit shall use the following categories of failing private sewage systems to determine grant eligibility under s. 145.245 (5), Stats., and Comm 87.20, to grant awards under s. 145.245 (7), Stats., and ss. Comm 87.30 and 87.31:

(1) ELIGIBLE FOR GRANT AWARD. As specified in s. 145.245 (5), Stats., only category 1 or category 2 failing private sewage systems are eligible for funding.
Comm 87.10

Wisconsin Administrative Code

Note: Section 145.245 (5), Stats., defines failure for two categories which are eligible for grant awards—Category 1, failing private sewage system as defined in s. 145.245 (6) (a) to (c), Stats.; Category 2, failing private sewage system as defined in s. 145.245 (4) (d), Stats.

(2) INELIGIBLE FOR GRANT AWARD. As specified in s. 145.245 (5), Stats., those systems that fail as a result of back up of sewage into the structure served are not eligible.

Note: Section 145.245 (5), Stats., defines Category 3, failing private sewage system as defined in s. 145.245 (4) (e), Stats., as ineligible for a grant award.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.

Comm 87.20 Eligibility of owners. (1) GENERAL. A person who owns a principal residence which was constructed prior to and inhabited on July 1, 1978 or a business which owns a small commercial establishment which was constructed prior to July 1, 1978 is eligible for grant assistance under this chapter if the person or business:

(a) Meets the eligibility requirements set forth in s. 145.245, Stats., and this chapter.

Note: Section 145.245 (5) (c) 1., Stats., specifies that in order to be eligible for grant awards under this section, the annual family income of the person who owns the principal residence may not exceed $45,000. Section 145.245 (5) (d) 1., Stats., specifies that in order to be eligible for grant awards under this section, the annual gross revenue of the business that owns the small commercial establishment may not exceed $62,500.

(b) Submits an application to the participating governmental unit in which the failing private sewage system is located.

(c) Has completed all rehabilitation or replacement work in accordance with the enforcement order and the state plumbing code, chs. Comm 82 to 84. Any variances or petitions to modify specific state plumbing code requirements shall be approved in writing by the department prior to the installation of the system.

(d) Owned the principal residence or small commercial establishment which is served by the category 1 or 2 failing private sewage system. A person does not meet this condition if he or she did not own the property at the time the private sewage system was failing and subject to a determination of failure. The buyer of the property is not eligible if the failing private sewage system was replaced prior to the date of sale. The seller of the property is not eligible if the determination of failure was made after the date of sale.

(2) PRIVATE NONPROFIT ENTITIES. For the purposes of this chapter a small commercial establishment may be owned by a private nonprofit corporation as defined in s. 181.0103 (17), Stats.

Note: Section 181.0103 (17), Stats., means a nonprofit corporation subject to the provisions of this chapter, except a foreign corporation.

(3) INELIGIBLE ENTITIES. Structures owned by any of the following entities are not eligible for grant awards:

(a) The state.

(b) An office, department, independent agency, institution of higher education, association, society or other body in state government.

(c) An authority created under ch. 231 or 234, Stats.

(d) A city, village, town or county.

(e) A federal agency, department or instrumentality.

(f) An interstate agency.

(4) REPLACEMENT OF STRUCTURES. (a) The owner of a principal residence or small commercial establishment who meets all of the requirements of s. 145.245, Stats., and this chapter may replace the structure served by the failing private sewage system and be eligible to apply for a grant to replace the failing private sewage system if all of the following additional conditions are met:

1. The original principal residence or small commercial establishment served by the failing private sewage system was constructed prior to and occupied on July 1, 1978.

2. Except as provided under par. (b), the original principal residence or small commercial establishment was owned and occupied by the owner when the determination of failure was made.

3. The determination of failure was made prior to the start of construction of the replacement private sewage system serving the principal residence or small commercial establishment.

4. The replacement private sewage system serving the principal residence or small commercial establishment was, or will be, constructed in a location that would be accessible to the failing private sewage system, as determined by the participating governmental unit.

(b) If the original principal residence or small commercial establishment was rendered uninhabitable because of accidental fire or storm damage, the determination of failure may be made up to 6 months after the original principal residence or small commercial establishment was last occupied.

(c) The maximum allowable grant amount shall be limited to the minimum private sewage system capacity that would have been necessary to serve the original structure. Any increase in capacity required to serve a larger replacement structure is not grant eligible.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99; correction in (2) made under 13.93 (2m) (h) 7., Register, April, 2000, No. 38.

Comm 87.21 Ineligibility of owners. (1) As specified under s. 145.245 (5m) (b), Stats., the department shall notify a governmental unit if it receives a certification under s. 49.855 (7), Stats., that an individual is delinquent in child support or maintenance payments or owes past support, medical expenses or birth expenses.

(2) The department or a governmental unit shall deny an application under sub. (1) if the department receives a certification under s. 49.855 (7), Stats., that the owner or an individual who would be directly benefited by the grant is delinquent in child support or maintenance payments or owes past support, medical expenses or birth expenses.

(3) The department or a governmental unit shall deny an application if a grant amount under this chapter has been previously awarded for rehabilitation or replacement work at the same site, except for those grants awarded on an annual basis for monitoring of approved experimental private sewage system, as specified in s. Comp 87.31.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.

Comm 87.30 Maximum allowable grant amount.

(1) ELIGIBLE REHABILITATION OR REPLACEMENT WORK. Except as provided under sub. (5) and s. Comp 87.72, private sewage system work eligible for grant awards shall be limited to those activities listed in the grant awards under sub. (3), and Tables 87.30–1 to 87.30–6.

(2) LEAST COSTLY METHODS. As specified in s. 145.245 (7), Stats., costs allowable in determining grant funding under this section may not exceed the costs of rehabilitating or replacing a private sewage system by the least costly methods. Only eligible work necessary to meet the minimum requirements of the state plumbing code by the least costly methods may be allowed in determining grant awards under this chapter.

(3) GRANT AWARDS. Grant awards shall be determined by calculating the maximum allowable grant amount by type of system, system component, or service provided.

(a) Site evaluation and soil testing. The maximum allowable grant amount for site evaluation and soil testing is $250.

(b) Installation of a replacement or additional septic tank. The maximum allowable grant amount for installation of a replacement or additional septic tank is listed in Table 87.30–1.

(c) Installation of a pump chamber and lift pump or siphon. The maximum allowable grant amount for installation of a pump chamber and lift pump or siphon is listed in Table 87.30–2.

(d) Installation of a non-pressurized and in-ground pressure soil absorption area. The maximum allowable grant amount for installation of non-pressurized and in-ground pressure soil absorption areas is listed in Table 87.30–3.
(e) Installation of an at-grade or mound soil absorption area. The maximum allowable grant amount for installation of at-grade or mound soil absorption areas is listed in Table 87.30-4.

(f) Installation of a holding tank. The maximum allowable grant amount for installation of a holding tank is listed in Table 87.30-5.

(g) Replacement exterior grease interceptor. The maximum allowable grant amount for installation of a replacement exterior grease interceptor is listed in Table 87.30-6.

(4) Use of grant award tables for small commercial establishments. In order to use Tables 87.30-1 to 87.30-6 for small commercial establishments, where applicable, divide the estimated daily wastewater flow rate in gallons per day by 150, round off to the next highest whole number and use the result in place of the number of bedrooms.

(5) Exceptions to the grant award tables. (a) The department may determine on a case-by-case basis the maximum allowable grant amount for types of private sewage systems which are not covered under sub. (3) and Tables 87.30-1 to 87.30-6.

(b) The maximum allowable grant amount for private sewage system work done on property owned by a licensed plumber or contractor engaged in the business of installing private sewage systems shall be limited to two-thirds of the grant amount or $4,667, whichever is less.

(c) The maximum allowable grant amount for each principal residence or small commercial establishment shall be limited to 60% of the total cost of replacement or the amount determined under sub. (3) and Tables 87.33-1 to 87.30-6, whichever is less.

Note: Under s. 145.245 (7) (d), Stats., if the income of the person who owns a principal residence exceeds $32,000 and the residence is served by a category 1 or category 2 failing private sewage system, the amount of the grant award under this section is limited to the amount determined in par. (c) less 30% of the amount which the person's income exceeds $32,000.

History: Cr., Register, December, 1998, No. 516, eff. 2-1-99.

Comm 87.31 Maximum allowable grant amount for experimental private sewage systems. (1) Pursuant to s. 145.245 (7) (e), Stats., this section establishes the parameters for allocating the maximum allowable state grant award for experimental private sewage systems.

(2) The department may determine on a case-by-case basis the maximum allowable grant amount for the installation and monitoring of an experimental private sewage system installed under s. 145.02 (3) (b), Stats.

(3) As specified in s. 145.245 (11) (d), Stats., the department may prorate available funds for the installation and monitoring of an experimental private sewage system.

Note: Section 145.245 (e), Stats., reads: "Costs allowable for experimental private sewage systems shall include the costs of installing and monitoring experimental private sewage systems installed under s. 145.02 (3) (b) and this section."

History: Cr., Register, December, 1998, No. 516, eff. 2-1-99.

Comm 87.32 Ineligible rehabilitation or replacement work. For the purposes of establishing work which is not eligible for a grant award under this chapter, the following items or projects are considered ineligible work:

(1) Rehabilitation or replacement of a failing private sewage system done before the date on which the governmental unit adopts this program.
Comm 87.40 Application by owners. (1) CONTENTS.

(a) In order to be eligible to receive a grant award under this chapter, the owner of a failing private sewage system shall submit an application to the participating governmental unit in which the private sewage system is located. The application shall be made on forms that are acceptable to the department.

(b) In order to be eligible to receive a grant award for experimental systems under this chapter, an owner shall submit information, in addition to those items specified in par. (a), that:

1. Documents that the experimental system is being conducted by an individual or entity as a research project under the management of the department.

2. Indicates the objectives of the experiment relative to treatment capabilities.

3. Delineates proposed sampling protocols of influent and effluent loads and flows.

4. Includes a proposed schedule for the installation, monitoring, reporting and conclusion.

5. Includes a copy of the monitoring contract with an estimate of the costs of monitoring for the project period.

6. Provides other documentation as requested by the department or participating governmental unit.

(2) PRINCIPAL RESIDENCE. The application by the owner of a principal residence shall be made on forms acceptable to the department and shall include all of the following:

(a) Evidence of annual family income. A person who owns a principal residence shall provide the evidence of income required under s. 145.245 (5) (c) 2., Stats., or the alternative evidence of income required under s. Comm 87.50.

(b) Sanitary permit number and date of issuance. A legible copy of the application for the sanitary permit issued by the county in which the private sewage system is located.

(c) Additional information. If, after a determination of failure is made, a person buys or sells the principal residence served by a failing private sewage system, the person shall provide the following additional information:

1. A copy of the closing statement or other documentation which shows the date of sale of the property.

2. A copy of the sale contract, escrow agreement or other documentation which shows that the owner has or will incur the cost of replacing the failing private sewage system.

(d) Other information. Any other information that may be requested by the department or the participating governmental unit.

(3) SMALL COMMERCIAL ESTABLISHMENTS. The application for eligible owners of small commercial establishments, as specified in s. 145.245 (5) (d) 2., Stats., shall be made on forms acceptable to the department and shall include all of the following:

(a) Evidence of annual business income. As specified in s. 145.245 (5) (d) 2., Stats., a business which owns a small commercial establishment shall provide one of the following as evidence of annual gross revenue:

1. A copy of the state and federal income tax returns filed by the business for the tax year prior to the year in which the determination of failure was made or for the tax year in which the determination of failure was made, whichever is required by the governmental unit to which the application is submitted.

2. If the small commercial establishment is owned by a private nonprofit corporation as defined in s. 181.0105 (17), Stats., the nonprofit corporation shall provide a profit and loss statement for the commercial establishment for the tax year prior to the year in which the determination of failure was made or for the tax year in which the determination of failure was made, whichever is required by the governmental unit to which the application is submitted.

Note: As specified in s. 145.245 (11) (d), Stats., the department may not allocate more than 10% of the funds available under this subsection each fiscal year for grants for small commercial establishments.

Note: As specified in s. 145.245 (5) (a) 2., Stats., a business must own the small commercial establishment in order to be eligible for a grant amount. A business which leases a small commercial establishment is not eligible. Therefore, the application and income eligibility requirements must be met by the owners of the property served by the failing private sewage system.

(b) Sanitary permit number and date of issuance. A legible copy of the application for the sanitary permit issued by the county in which the private sewage system is located.

(c) Additional information. If, after a determination of failure is made, a person buys or sells the small commercial establishment served by a failing private sewage system, the person shall provide the following additional information:

1. A copy of the closing statement or other documentation which show the date of sale of the property.

2. A copy of the sale contract, escrow agreement or other documentation which shows that the owner has or will incur the cost of replacing the failing private sewage system.

(d) Other information. Any other information that may be requested by the department or participating governmental unit.

Comm 87.50 Alternate evidence of income. A participating governmental unit may disregard the evidence of income under s. Comm 87.40 and consider any of the following criteria as satisfactory evidence of income:

1. A copy of the owner’s Wisconsin income tax return for the taxable year in which the enforcement order was issued and, if married and filing separately, a copy of the Wisconsin income tax return for that same year for the owner’s spouse.

2. In conjunction with the evidence of income required under sub. (1), an affidavit from the owner. The affidavit shall state the reason that a reduction in net income or adjusted gross income is expected in the year in which the enforcement order was issued, the estimated amount of that reduction, and a complete listing of taxable income and adjustments since January 1 of the year in which the enforcement order is issued.

3. An affidavit from the owner stating the reason that he or she was not required to file a Wisconsin income tax return in the year prior to the year in which the enforcement order was issued. If a person who owns the principal residence was a non-resident or year resident of Wisconsin in the year prior to the enforcement order, the affidavit shall include a statement that the owner is a permanent resident of Wisconsin, the date on which permanent residency began, and the owner’s estimate of Wisconsin adjusted gross income in the year in which the enforcement order was issued. The owner’s estimate shall include a complete listing of taxable income and adjustments since January 1 of the year in which the enforcement order was issued. The participating governmental unit shall require additional evidence as necessary to provide proof of Wisconsin residency.

Comm 87.60 Application by participating governmental units. (1) The participating governmental unit shall
review information received from owners and determine eligibility under s. 145.245, Stats., and this chapter, except for applications for monitoring as specified in s. Comm 87.31. In order to receive an allocation and grant award, the participating governmental unit shall prepare and submit an application to the department. The application shall be on forms supplied by the department.

Note: Application forms may be obtained, at no charge, from the Department of Commerce, Safety and Buildings Division, P.O. Box 2538, Madison, Wisconsin 53701-2538.

2. An American Indian tribe or band may submit an application for participation for any lands under its jurisdiction.

3. Governmental units may request pre-application assistance including technical assistance from the department.

4. Applications shall be received by the department no later than January 31 for consideration in the following fiscal year. Participating governmental units may request in writing to the department prior to December 31, a six-month extension to the project period.

5. An application for a grant to replace or rehabilitate a private sewage system shall include all of the following:
   (a) Certified copies of the following resolutions of the governing body of the governmental unit:
      1. A resolution designating an authorized representative, and authorizing such representative to apply for a grant under s. 145.245, Stats., and this chapter on behalf of the governmental unit. The authorized representative shall be an official or employee of the governmental unit.
      2. A resolution certifying that grants will be used for rehabilitation or replacement of a private sewage system for principal residence or small commercial establishment owned by a person who meets the eligibility requirements of s. 145.245 (5), Stats., that the funds will be used as provided under s. 145.245 (6), Stats., and that the maximum allowable grant amount will not exceed the amount permitted under s. 145.245 (7), Stats., and Tables 87.30–1 to 87.30–6.
      3. A resolution certifying that grants will be used for rehabilitation or replacement of private sewage systems which will be properly installed and maintained.
      4. A resolution certifying that grants provided to the governmental unit will be disbursed to eligible owners, as specified in s. Comm 87.30 and s. 145.245, Stats.
   (b) Documentation of a regulatory program to insure proper installation and maintenance of all new or replacement private sewage systems constructed in the area of jurisdiction of the governmental unit. An approvable regulatory program shall include the following:
      1. Adoption of an ordinance which specifically requires compliance with the maintenance program set forth in subd. 4. and which specifically grants enforcement authority.
      2. A system for providing written notice of the maintenance program requirements to each owner for a sanitary permit at the time of application.
      3. An inspection program, which includes at least one inspection during installation of a private sewage system.
      4. A maintenance program which requires inspection or pumping of all new or replacement private sewage systems at least once every 3 years. Every 3 years, the owner of a private sewage system subject to the maintenance program shall submit to the governmental unit a certification form as provided by the governmental unit and signed by a master plumber, a journeyman plumber or restricted service plumber licensed under ch. 145, Stats., a person licensed under s. 281.48, Stats., a person holding a current certification as listed in s. Comm 5.66 as a private sewage treatment system (FOWTS) inspector, or by an employee of the participating governmental unit or state so designated by the department, who has inspected the private sewage system. The inspection form shall require certification that the system is in proper operating condition, and that after inspection and pumping, if necessary, the treatment or holding tank is less than one-third full of sludge and scum.

5. A central record keeping system, so maintained for a period of not less than six years from the date of system installation and capable of providing evidence that the governmental unit is administering the program as specified in this chapter.

6. Where considered appropriate by the governmental unit, a system of user charges and cost recovery which assures that each recipient of service under this program will pay a proportionate share of the program costs. User charges and cost recovery may include the cost of the grant application fee and the cost of supervising and maintaining an installation and maintenance program.

(c) A list of owners approved as eligible by the participating governmental unit. The list shall include, at a minimum, the name of each owner, the name of the municipality in which the private sewage system is located, the uniform sanitary permit number and the maximum allowable grant amount as determined under s. Comm 87.30 or 87.31.

6. Other information as requested by the department.

History: Cr., Regulate, December, 1998, No. 516, eff. 2–1–99.

Comm 87.70 Allocation of funds and grant awards.

1. GENERAL. The department shall allocate funds available for grant awards to participating governmental units as provided in s. 145.245 (11), Stats., except for funds so specified in s. Comm 87.72.

2. PRORATION. (a) If available funds are not sufficient to fully fund all applications, the department shall prorate available funds under s. 145.245 (11m), Stats. A prorated payment shall be deemed full payment of the grant.

(b) A grant application denied under s. 145.245 (11m) (e), Stats., is not eligible for awards in a later fiscal year.

3. REVISION OF ALLOCATION OR AWARD. (a) If the department finds that an owner listed in the application of a governmental unit does not meet the eligibility requirements under s. 145.245 (5), Stats., the department may reduce an allocation to the governmental unit in the current or in a following fiscal year.

(b) The department may withhold funds allocated to a governmental unit and initiate enforcement under s. Comm 87.80, if a governmental unit does not meet the conditions specified under s. 145.245 (9), Stats.

(c) The department may reallocate any withheld or recovered funds in the following fiscal year.

4. EXPERIMENTAL SYSTEMS. The allocation and payment of grant awards for experimental private sewage systems shall be in accordance with ss. Comm 87.31 and 87.72.

History: Cr., Regulate, December, 1998, No. 516, eff. 2–1–99.

Comm 87.71 Payments to participating governmental units.

1. Except as provided in s. Comm 87.72, grant payments shall be made to the participating governmental unit which shall be responsible for disbursing all funds received from the department for the purposes for which the grant award was made.

2. A participating governmental unit shall request payment on forms acceptable to the department and shall include such information as required by the department to document satisfactory completion of eligible work. Payments shall be requested in accordance with the payment schedule included in the grant award conditions.

3. The total grant amount payable to a participating governmental unit is limited to the amount of funds awarded to the participating governmental unit under this chapter. The specific grant amount for individual owners of a private sewage system is limited to the maximum allowable grant amount under s. Comm 87.30. Payment based on a prorated grant amount shall constitute a complete payment for that owner.
(4) At any time before final payment of the grant, the department may review and audit any request for payment. Based on the review or audit, any payment may be reduced for prior overpayment or increased for prior underpayment.

(5) The participating governmental unit shall return to the department any funds, including any interest derived therefrom, received under this chapter which are not disbursed to eligible owners.

(6) The department may authorize the withholding of a grant payment where it determines in writing that a participating governmental unit has failed to comply with program objectives, grant award conditions, or reporting requirements. Such withholding shall be limited to only that amount necessary to assure compliance.

(7) The department shall withhold a grant payment to the extent of any indebtedness, relating to the provisions of this chapter, of the participating governmental unit to the state of Wisconsin, unless it determines that collection of the indebtedness will impair accomplishment of the program objectives and that continuation of the project is in the best interest of the state of Wisconsin.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.

Comm 87.72 Payments for monitoring of experimental systems. (1) Except as provided in ss. Comm 87.70 and 87.71, the department shall make grant payments for monitoring of experimental private sewage systems to the individual or entity performing the monitoring for the maximum allowable amount on an annual basis up to the approved estimated costs for monitoring for eligible work for a project period.

(2) (a) The individual or entity performing the monitoring shall request payment on forms acceptable to the department and shall provide such information as required by the department to document satisfactory completion of eligible work. Subsequent annual payments for monitoring shall be requested in accordance with the payment schedule included in the grant award conditions as approved by the department.

(b) The individual or entity performing the monitoring shall make a request to the department for payment of monitoring costs on an annual basis by submitting paid invoices documenting the eligible work provided as included in the grant award conditions. Payments shall be awarded to the eligible individual or entity in accordance with the payment schedule included in the conditions of the grant, the maximum allowable grant amount, and usual and customary costs for monitoring of an experimental private sewage system.

(c) A direct payment of monitoring costs shall be made to the individual or entity in accordance with this section.

(3) The total grant amount payable to the individual or entity for monitoring shall be limited to the amount of funds available for allocation in the project period for experimental systems under this chapter.

(4) At any time before final payment of the approved grant amount, the department may review and audit any request for payment. Based on the review or audit, any payment may be reduced for prior overpayment or increased for prior underpayment.

(5) The department may authorize the withholding of a grant payment where it determines in writing that an owner has failed to comply with program objectives, grant award conditions, or reporting requirements. Such withholding shall be limited to only that amount necessary to assure compliance.

(6) The department shall withhold a grant payment to the extent of any indebtedness, relating to this chapter, of the owner to the state of Wisconsin, unless it determines that collection of the indebtedness will impair accomplishment of the program objectives and that continuation of the project is in the best interest of the state of Wisconsin.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.

Comm 87.80 Program enforcement. If the department has reason to believe that a violation of the provisions of this chapter or of any grant award or grant award amendment made under this chapter has occurred, the department may take any of the following actions:

(1) Under s. 145.245 (14), Stats., the department may cause written notice to be served upon the alleged violator, and in conjunction with that notice may either:

(a) Issue an order that corrective action be taken by the alleged violator within a reasonable time.

(b) Require that the alleged violator appear before the department for a hearing to answer the charges that a violation has occurred.

(2) Under s. 145.245 (14), Stats., the department may terminate or annul a grant made under this section and seek recovery of some or all grant funds previously paid to the participating governmental unit or owner, if an order issued under s. 145.02 (3) (f), Stats., is violated.

(3) Under s. 145.245 (14) (d), Stats., the department may suspend or terminate additional grant awards made under this chapter if the department finds that a private sewage system previously funded by the participating governmental unit with a grant awarded under this chapter is not being or has not been properly rehabilitated, constructed, installed or maintained.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.

Comm 87.81 Program audit. (1) A governmental unit, owner or any other individual or entity receiving a grant award under this chapter shall make available to the department, upon request, any and all records necessary to ascertain compliance with this chapter and the provisions as specified in s. 145.245, Stats.

(2) The department may require documentation of monitoring and an audit of the individual or entity providing monitoring.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.

Comm 87.90 Petition for variance. (1) PROCEDURE. Under ch. Comm 3, the department shall consider and may grant a variance to an administrative rule upon receipt of a fee, a completed petition for variance form from the owner, and a completed municipal recommendation from the participating governmental unit having responsibility and an interest in the rule, provided an equivalency is established in the petition for variance which meets the intent of the rule being petitioned and the department may impose specific conditions in granting a variance to promote the protection of the health, safety or welfare of employees or the public. Violation of those conditions under which the variance is granted constitutes a violation of these rules.

(2) PETITION PROCESSING TIME. Except for priority petitions, the department shall review and make a determination on a petition for variance within 30 business days of receipt of all calculations, documents and fees required to complete the review. The department shall process priority petitions within 10 business days.

Note: The petition for variance form (SR0–9800) is available, at no charge, from the Department of Commerce, Safety and Buildings Division, P.O. Box 7162, Madison, WI 53707–7162. Refer to s. Comm 2.53 for fees and processing of priority petitions.

History: Cr., Register, December, 1998, No. 516, eff. 2–1–99.
Comm 87.91 Process for appeal. (1) Denial by a participating governmental unit. When a decision by a participating governmental unit is denial of a grant award, the owner may appeal the decision of the governmental unit in accordance with ch. 68, Stats.

(2) Denial by the department. When a decision by the department is denial of a grant award, the owner may appeal the decision of the department in writing within 30 days from the date of said decision.

Note: Section 101.02 (6), Stats., outlines the procedure for submitting requests to the department for appeal hearings and the department procedures for hearing appeals.

History: Cr., Register, December, 1998, No. 516, eff. 2-1-99.
