Personal Protective Equipment COVID-19

The Department of Safety and Professional Services
Solid Waste & Wastewater Workers Focused
March 25, 2020
Objectives

- Train the Trainer - use the Notes view to see the included commentary
- COVID-19 as of March 10, 2020
- CDC Guidance for Wastewater Workers Recommendations
- Provide information on the selection and use of PPE

This training was developed to provide Personal Protective Equipment (PPE) information and resources for wastewater workers.
Water Transmission and COVID-19

Check the Wisconsin Department of Health Services website for updates and resources.
Wastewater Guidance

- Risk of transmission of COVID-19 from feces of an infected person is expected to be low based on data from previous outbreaks of related coronaviruses.
- No reports of fecal-oral transmission of COVID-19 to date.
What is the most common cause of infection?

*poor personal hygiene*

Three basic routes that may lead to infection:
- Ingestion through splashes, contaminated food, or cigarettes
- Inhalation of infectious agents or aerosols
- Infection due to an unprotected cut or abrasion

- **Ingestion** generally the major route of wastewater worker infection.
  - Hand-to-mouth habits
- **At highest risk:** workers who eat or smoke without washing their hands
- **Personal hygiene practices** including frequent washing of the hands will minimize these potential exposures

Ingestion can also occur from splashes to your face, wear a face shield when required
Wastewater Safe Practices

- Follow routine practices to prevent exposure to wastewater
  - Engineering & administrative controls
  - Safe work practices
  - PPE

- No additional COVID-19 specific protections are recommended

- Current disinfection methods are expected to be sufficient, such as:
  - Oxidation with hypochlorite (i.e., chlorine bleach)
  - Peracetic acid
  - Ultraviolet irradiation.

Remember to check reputable sources daily for updates.
<table>
<thead>
<tr>
<th>Basic Hygiene Practices</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Wash hands with soap and water</td>
</tr>
<tr>
<td>• immediately after handling waste</td>
</tr>
<tr>
<td>• before eating or drinking</td>
</tr>
<tr>
<td>• before and after using the toilet</td>
</tr>
<tr>
<td>• Avoid touching face, mouth, eyes, nose, or open sores and cuts</td>
</tr>
<tr>
<td>• Before eating, removed soiled work clothes and eat in designated areas away from human waste and sewage-handling activities</td>
</tr>
<tr>
<td>• Do not smoke or chew tobacco or gum while handling human waste or sewage</td>
</tr>
<tr>
<td>• Keep open sores, cuts, and wounds covered with clean, dry bandages</td>
</tr>
<tr>
<td>• Remove rubber boots and work clothes</td>
</tr>
<tr>
<td>• Shower and change into clean clothes before leaving worksite</td>
</tr>
<tr>
<td>• Clean contaminated work clothing daily with 0.05% chlorine solution (1 part household bleach to 100 parts water)</td>
</tr>
</tbody>
</table>

Alternatively, use an industrial laundry service for your workplace clothes
### Personal Protective Equipment (PPE)

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Goggles</strong></td>
<td>to protect eyes from splashes of human waste or sewage.</td>
</tr>
<tr>
<td><strong>Protective face mask</strong></td>
<td>to protect nose and mouth and face from splashes of human waste or sewage.</td>
</tr>
<tr>
<td><strong>Liquid-repellent coveralls/Apron</strong></td>
<td>to keep human waste or sewage off clothing.</td>
</tr>
<tr>
<td><strong>Waterproof gloves</strong></td>
<td>to prevent exposure to human waste or sewage.</td>
</tr>
<tr>
<td><strong>Rubber boots</strong></td>
<td>to prevent exposure to human waste or sewage.</td>
</tr>
</tbody>
</table>

This slide shows the purpose of each kind of personal protective equipment.
<table>
<thead>
<tr>
<th>Factors Influencing PPE Selection</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Type of exposure anticipated</td>
</tr>
<tr>
<td>• Splash/spray versus touch</td>
</tr>
<tr>
<td>• Category of precaution, low risk versus high risk</td>
</tr>
<tr>
<td>• Durability and appropriateness of the PPE for the task</td>
</tr>
<tr>
<td>• Fit, will PPE create a different risk</td>
</tr>
</tbody>
</table>
Gloves

- Limited/no protection when heavily soiled, torn or have holes
- Avoid “touch contamination”
  - Don’t touch your face or adjust PPE with contaminated gloves
  - Don’t touch other surfaces except as necessary
- Change Gloves
  - During use if torn and when heavily soiled
- Clean/disinfect per manufacturers instructions- wear a disposable glove under reusable gloves
- Never re-use disposable gloves even if you think that they are clean
Coveralls

• Used to protect skin and/or clothing

Check the permeability of your coveralls and understand the protection they can provide, i.e. cloth coveralls will not protect you from liquids.
Eye and Face Protection

Eye
- Goggles, should fit snugly over and around eyes
  - Used for liquid splashes and/or particles
- Safety glasses, used for protection against particles

Face
- Face shields protect face, noise, mouth and eyes
- Should cover forehead, extend below chin and wrap around side of face
- Goggles or safety glasses need to be worn under a face shield

Read and understand the manufacturer’s use and limitations instructions
How to safely put on, use and remove PPE
Key Points About PPE

- Put on before exposure potential
- Use carefully – don’t spread contamination, e.g. touching surfaces with contaminated gloves
- Remove and discard carefully, contaminated PPE is a source of exposure to you
- Immediately wash your hands and/or body parts as applicable to your situation

Kindly and effectively provide feedback to your co-workers if you notice that they are not properly wearing their PPE.
Example Sequence for Putting on PPE

- Coveralls
- Goggles
- Face shield
- Gloves

While PPE provides protection, you need to be careful when selecting PPE to ensure that the PPE doesn’t create a greater hazard than the one you are protecting against.

As previously mentioned, check manufacturer’s instructions and warnings to ensure you know the protection limitations of the PPE you have selected.
## Putting On Eye and Face Protection

**Eye**
- Position goggles or glasses over eyes and secure to your head using earpieces or headband

**Face Shield**
- Position face shield over face and secure on brow with headband
- Adjust to fit comfortably

It’s important to make sure that your eye and face protection is put on properly and **comfortably** so that you are not adjusting it with your contaminated hands or that it falls off during use.
Putting on Gloves

Put on gloves last
Select correct type and size
Insert hands into gloves
Extend gloves over arm protection cuff if present or under coverall arm sleeve

Gloves that are too big or small have the potential to decrease protection by breaking, tearing or falling off
<table>
<thead>
<tr>
<th>Contaminated and Clean Areas of PPE</th>
<th>Contaminated – Outside Front</th>
<th>Clean - Inside</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Areas of PPE that have or are likely to have been in contact with body sites, materials or environmental surfaces where the infectious organism may reside</td>
<td></td>
<td>• Areas of PPE that are not likely to have been in contact with the infectious organism</td>
</tr>
</tbody>
</table>

It is safest to treat all your used PPE as if it were contaminated. Consider having water soluble laundry bags on site for workers to immediately place their grossly contaminated clothing into. These water-soluble bags can then be placed directly into the washer, without having to remove the clothing from the bag.
This specific sequence is important to avoid contaminating yourself.
Frequent hand washing and/or use of hand sanitizer can result in dry or cracked hands. Make sure to use hand lotion based on your skin needs to avoid dry or cracked hands. Many people find that limited ingredient and non-scented products work best for them. Some examples are No-Crack or Udder Balm and other products that are focused on occupations that required frequent hand washing or harsh conditions.
Order of Removing PPE

1. Coveralls/Apron
2. Gloves
   Wash Hands
3. Face Shield/Eye Protection
   Wash Hands

The order is important to reduce potential contamination
Removing Gloves

• Grasp outside edge near wrist
• Peel away from hand, turning glove inside-out
• Hold in opposite gloved hand

It takes a bit of practice to do this correctly. To save resources you can practice with reusable gloves such as dishwashing gloves to master the process.
Removing Gloves, cont.

Slide ungloved finger under the wrist of the remaining glove.

Peel off from inside, creating a bag for both gloves.

Discard gloves.

Be careful to only touch the inside of the remaining glove.
Clean PPE first
Note: If soiled clothes do go home, they should be washed separately from family clothes.

Disinfect PPE
- Use disinfectants available as EPA-certified formulations
- Use at recommended concentrations or dilutions

The manufacturer’s recommend concentration(s) as provided on the label, are the most effective concentrations; more is not always better when it comes to disinfection concentrations
### Resources
